

Supplementary Figure 1

3-dimensional representation of POLR1C extrapolated from the yeast Pol I structure. *POLR1C* mutations affect amino acids that are conserved in *S. cerevisiae*. Due to their location at the hydrophobic core of the subunit, four of the mutations (p.Met65Val (Leu56), p.Val94Ala (Phe85), p.Ile262Thr (Ile256), p.Glu324Lys (K316)) likely impair, at least partly, the overall folding of POLR1C. The location of p.Arg109His (Arg100) in the vicinity of POLR2L (RPB10) can be extrapolated to a similar location in Pol III and suggests that the interaction of POLR1C to the remainder of the Pol III could be weakened. As p.Asn74Ser (Asn65) is located at the interface with POLR1B (RPA135), a similar conclusion can be drawn regarding the interaction with POLR3B. The mutation p.Cys146Arg (Cys140) are predicted to impair the overall folding of the subunit, altering its stability. The deletion p.Lys295del (Asp287) is represented on the left panel while the deleted portion of the protein is shown in light grey on the right panel. p.Thr26Ile, p.Asn32Ile and p.Lys154Rfs*4 were not represented since they are not found in the POLR1C structure model or represent a large truncation of the protein.

Supplementary Figure 2

Full scan of the Western blot showing expression levels of FLAG-tagged POLR1C variants (WT and mutants) using GAPDH as a loading control.

Supplementary Table 1: Exome sequencing summary

| NGS summary for each sample | Patient 1 | Patient 2 | Patient 3 |
|-------------------------------------|-----------|-----------|-----------|
| Total captured (G) | 4.9 | 6.1 | 3.7 |
| % of captured with > 10 (%) | | | 95.8 |
| Average coverage of captured region | 56.06x | 58.42x | 104.8x |
| | | | |
| Total number of SNPs | 73,126 | 70,768 | 35,667 |
| Total number of INDELS | 6,662 | 6,598 | 2941 |
| | | | |
| Homozygous | | | |
| NS/I | 4,851 | 4,624 | 4,809 |
| *Novel | 27 | 8 | 22 |
| Common on both samples | 0 | 0 | 0 |
| Different mutations in same gene | 1 | 1 | 0 |
| | | | |
| Heterozygous | | | |
| NS/I | 7,103 | 6,837 | 5,633 |
| *Novel | 238 | 180 | 351 |
| Common on both samples | 12 | 18 | 11 |
| Common to ALL samples | 1 | 1 | 1 |
| | | | |
| # X-linked | 1,186 | 1,160 | 1,030 |

***Novel variants refer to those not present in the dbSNP and 1000 Genome databases**

Legend: NS: non-synonymous; I: indel

Supplementary Table 7: POLR1C ChIP-Sequencing data.

All peaks called by MACS and corresponding to known Pol III transcribed-genes are listed. Alu sequences and other repeats were not included. POLR1C variant (WT, N32I or N74S) is indicated in the first column. The gene full name was obtained in tRNAscan-SE or GENCODE Genes V19. Several peaks encompassed more than one neighboring tRNA genes, which are indicated as second, third and fourth genes. Legend: Chr: chromosome, Abs: absolute, FE: fold enrichment.
