

SUPPLEMENTARY FIG. S2. Age-adjusted incidence of thyroid cancer per 100,000 people for the United States and Vermont, 1994–2007. (A) The average annual age-adjusted incidence was 8.0 (VT) and 8.4 (U.S.). The annual percent change (EAPC) at 8.3 [CI 5.7–11.0] for Vermont and 5.7 [CI 5.2–6.3] for the United States were significant ($p < 0.001$). (B) The average annual age-adjusted incidence for females was 11.8 (VT) and 12.3 (U.S.). The EAPC was 9.9 [CI 5.9–4.0] for Vermont and 5.9 [CI 5.4–6.3] for the United States were significant ($p < 0.001$). (C) The average annual age-adjusted for males was 4.1 (VT) and 4.4 (U.S.). The EAPC was 4.9 [CI 0.2–9.9] for Vermont and 5.1 [CI 4.4–5.7] for the United States were significant at $p < 0.05$ (VT) and $p < 0.001$ (U.S.).
