

SUPPLEMENTARY FIG. S2. Motor functions of the offspring at the 2-month-old age. **(A, B)** Total distance and movement time in the open field test. The offspring of propyl-thio-uracil (PTU)-treated mice moved a shorter total distance than control mice. **(C)** The offspring of PTU-treated mice spent a much longer time to descend the pole in the pole climbing test. **(D)** The score assigned in the wire suspension test. For all experiments, data are presented as the mean \pm standard error of mean (SEM). $n=12$, Student's t -test, * $P < 0.05$, ** $P < 0.01$.
