

Suppl. Fig. 4. Effect of aging and previously diagnosed CRC on normal colonic mucosa methylation. (A) IGF2 (probes I-III) and (B) NEUROG1 (probes I,III,IV and VI) normal mucosa Dm values. Study groups: Patients 50 years old and younger with no CRC diagnosed (n=22) and CRC diagnosed (n=6) and patients over 50 years old with no CRC diagnosed (n=17) and CRC diagnosed (n=10). Statistics was performed by One-way ANOVA, post hoc test Tukey for pairwise comparisons or non-parametric test Kruskal-Wallis 1-way ANOVA (k samples), pairwise comparisons. Homogeneity of variances was tested by Levene's test and normality by Shapiro-Wilk test of normality.
