

# Supplementary Data

SUPPLEMENTARY TABLE S1. STUDY GROUP CHILDREN<sup>1</sup>

	<i>RV + GE</i> (n = 24) <sup>a</sup>	<i>RV - GE</i> (n = 12) <sup>b</sup>
Age (months) <sup>c</sup>	15 (3–35)	15 (7–22)
Sex (Male/Female)	15/9	7/5
% Breastfed	50	25
DAOD <sup>d</sup>	3 (0.7–10)	4.5 (3–10)
Moderate/severe GE <sup>e</sup>	1/24	1/11

<sup>1</sup>Stool samples contained<sup>a</sup> or did not contain<sup>b</sup> RV antigen as determined by ELISA and PCR. <sup>c</sup>Median (range). <sup>d</sup>DAOD: days after onset of diarrhea. <sup>e</sup>Severe GE 11–20 points, Moderate GE 7–10 points Ruuskas scale (Rojas et al, 2007. *Viral Immunol* 20:300–311). No statistical differences were seen between the two groups.

**SUPPLEMENTARY FIG. 1.** CD63 detection by WB of F3 prepared from supernatants of Caco-2 cells 6 h after mock treatment or RRV infection is shown.
