

Fig S2

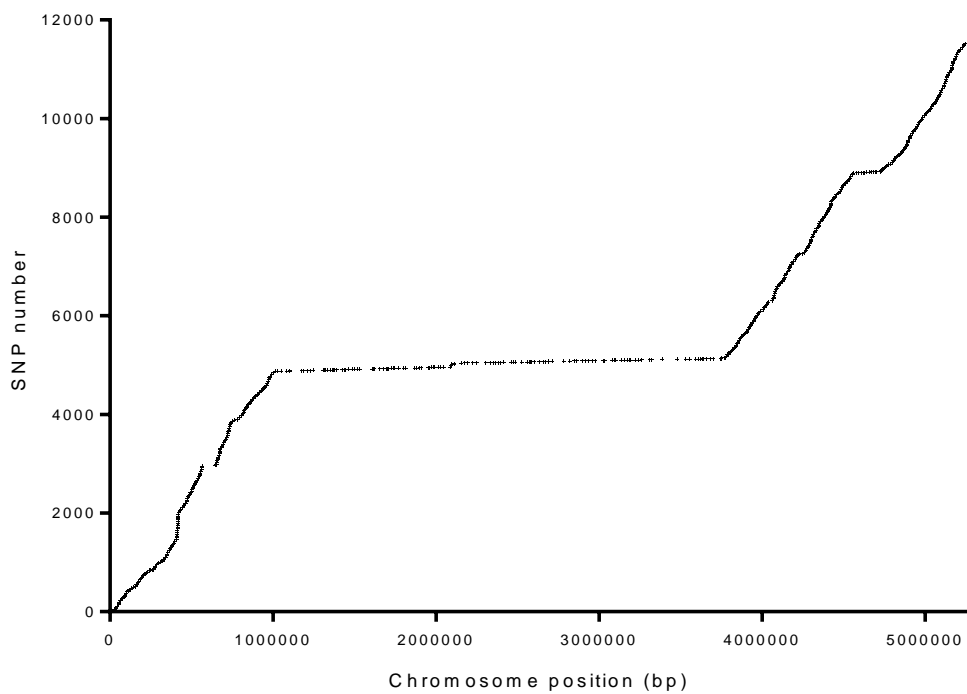

FIG S2 Scatterplot of SNP number in CAS686 related to position in the NTUH-K2044 chromosome. Of 11,519 SNPs identified, only 254 SNPs were located in the region corresponding to position 1.0 to 3.7 Mbp in the NTUH-K2044 chromosome revealing a chimeric composition of CAS686 between a CC23 strain and a strain of unknown clonal origin.
