

Supplementary Information

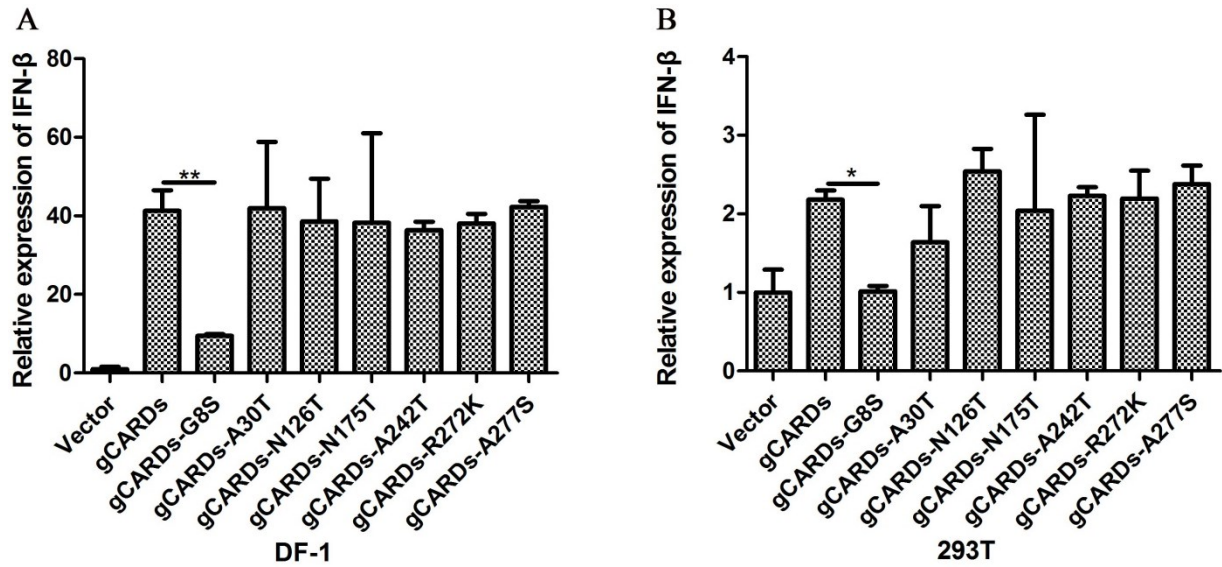

Figure S1. *IFN-β* mRNA levels induced by sites mutagenesis of gCARDs. DF-1 (A) and 293T (B) cells were transfected with recombinant plasmids for 24 h, then qRT-PCR were performed to detect *IFN-β* mRNA levels. Results are representative of two independent experiments (mean \pm SEM). * $p \leq 0.05$ vs. gCARDs, ** $p \leq 0.05$ vs. gCARDs.
