

Supplemental information

Supplemental Figure Legends

Figure A1. Phylogram of cathepsins.

A maximum likelihood phylogeny of aspartyl and cysteine cathepsins in *T. thermophila*, together with the most highly related homologs (as judged by BLAST scores) present in a variety of organisms from the other major eukaryotic lineages. This figure represents an extended version of Figure 1B.

Figure A2. Primary sequence alignment of Cathepsin 4 (Cth4p) of *T. thermophila* with *H. sapiens* Cathepsin C

Conserved catalytic motifs are highlighted in red. Conserved active site residues C, H, N are marked by arrows. GenBank™ Accession Number of *Tetrahymena CTH4* is XM_001023356. UniProtKB/Swiss-Prot number of human cysteine protease (CTHC) is P53634.

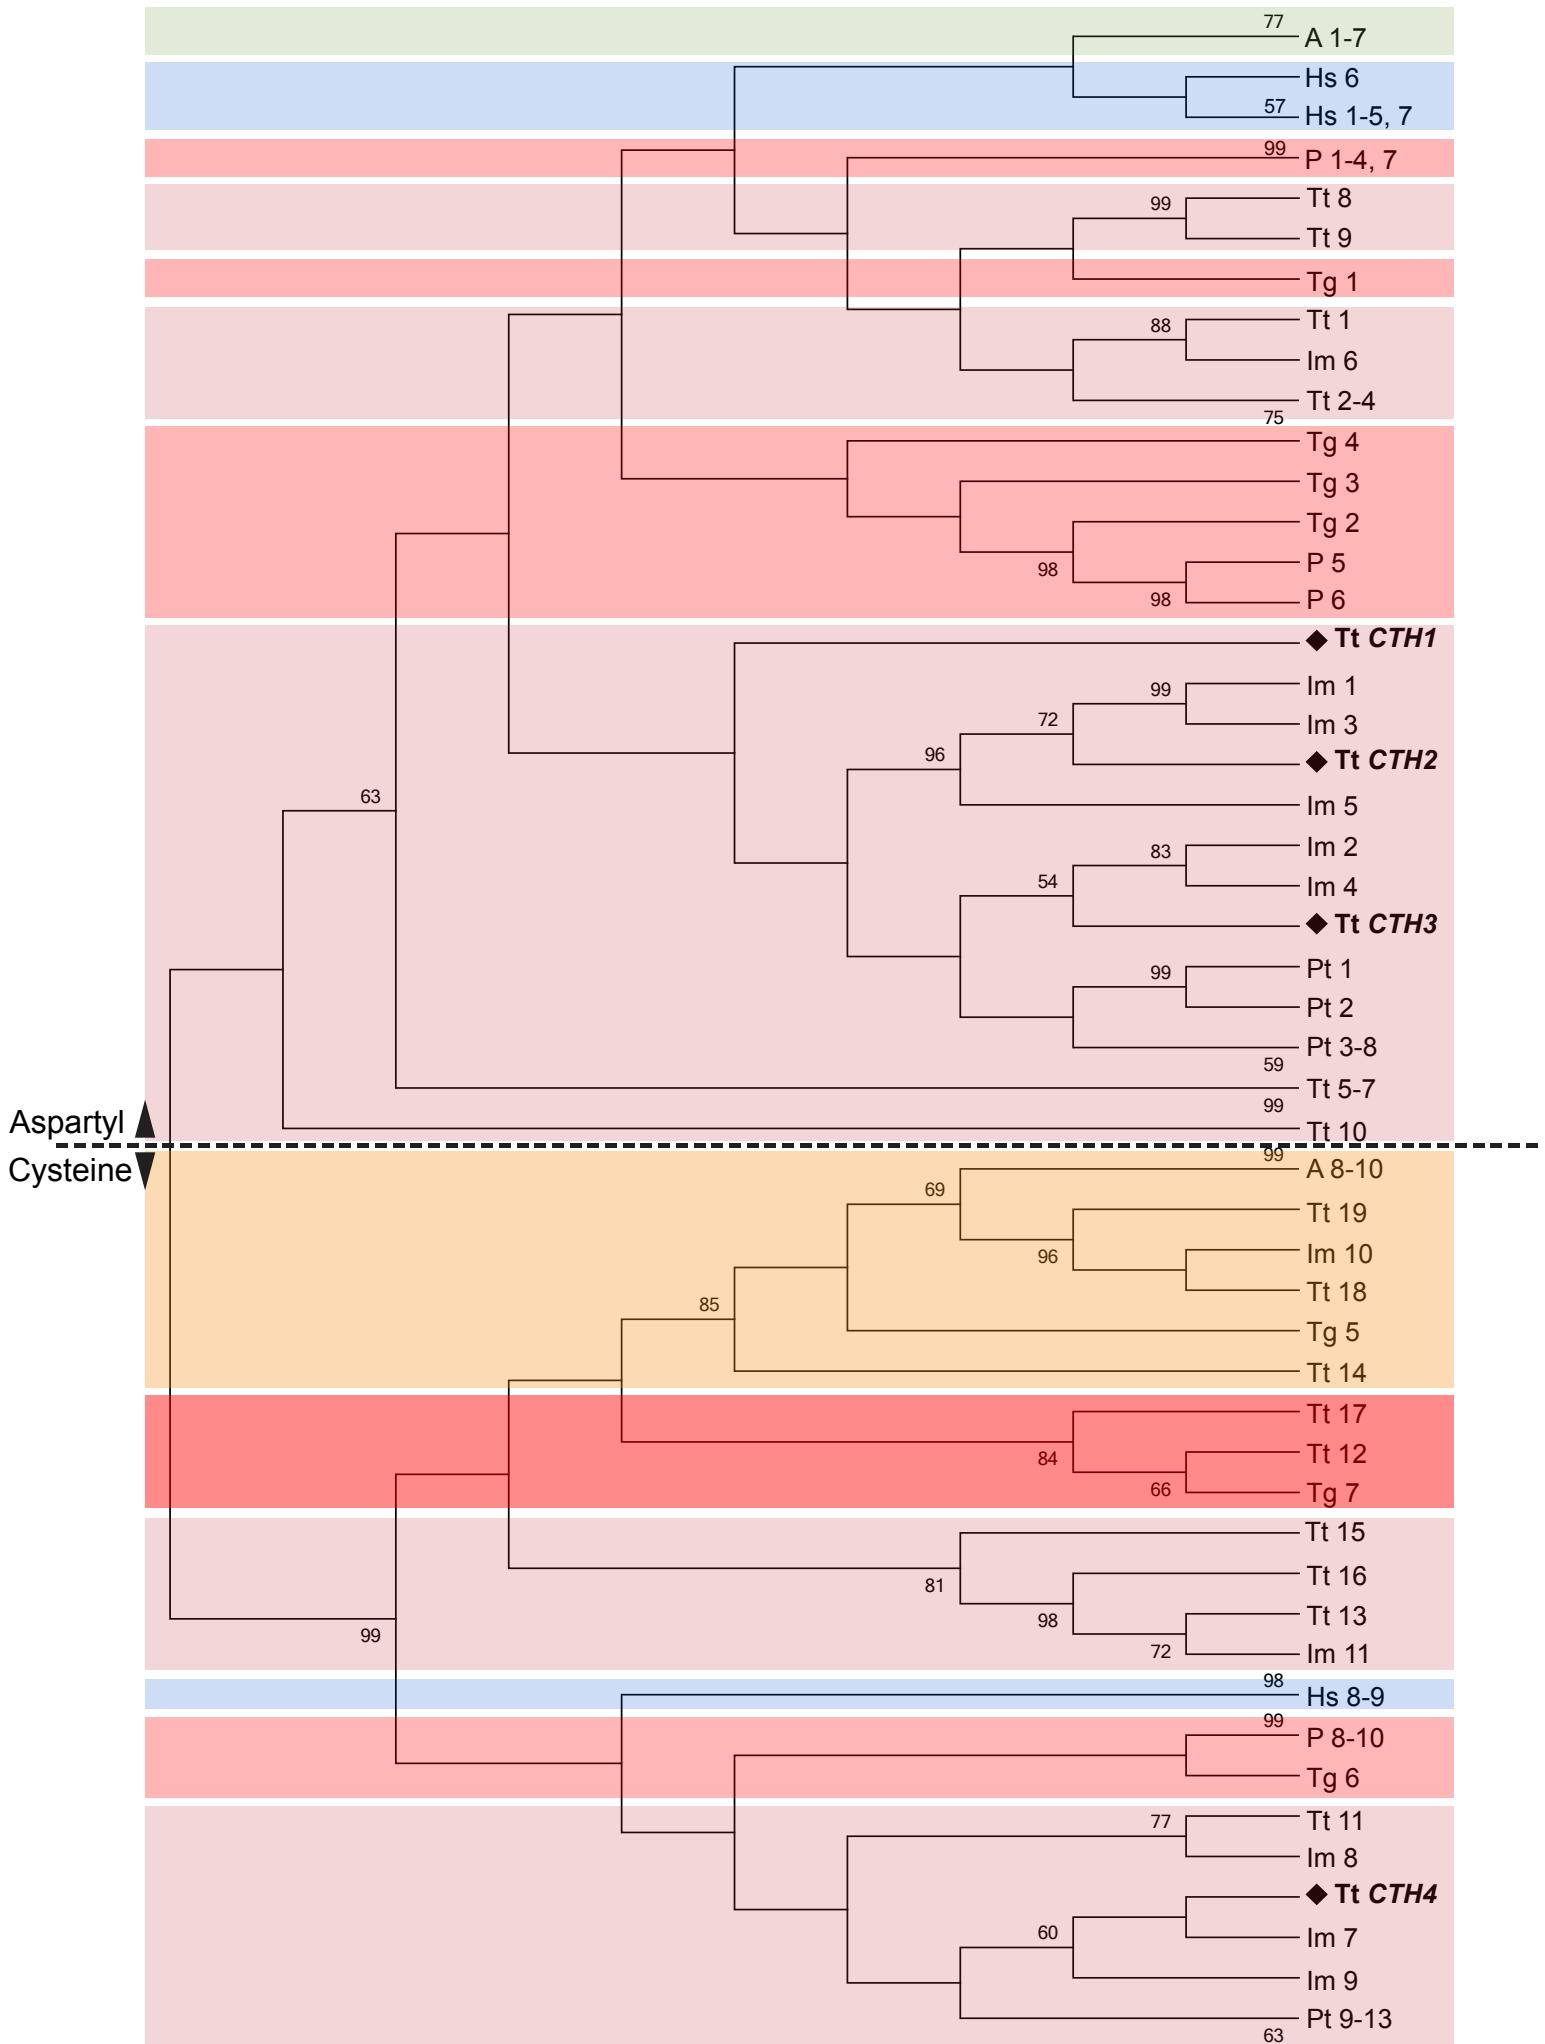

Table S1. Master Primer list

Nam	Description	5'-Sequence-3'
