

**Supplemental Material**

**Mercury Exposure and Antinuclear Antibodies among Females of  
Reproductive Age in the United States: NHANES**

Emily C. Somers, Martha A. Ganser, Jeffrey S. Warren, Niladri Basu, Lu Wang, Suzanna M.  
Zick, and Sung Kyun Park

**Table S1.** Association between mercury exposure and ANA positivity among females 16-49 years in the general US population (NHANES), with adjustment for polychlorinated biphenyls (PCBs).

<b>Mercury exposure</b>	<b>ANA positive n (%)<sup>a</sup></b>	<b>Crude Model<sup>b</sup> OR (95% CI)</b>	<b>Coplanar PCBs<sup>c,d</sup> OR (95% CI)</b>	<b>Prevalent PCBs<sup>c,e</sup> OR (95% CI)</b>
<b>Hair mercury (ppm)<sup>f</sup></b>				
Tertile 1 (<0.11)	13 (8)	1.00 (referent)	1.00 (referent)	1.00 (referent)
Tertile 2 (0.11-0.27)	22 (13)	1.61 (0.27, 9.64)	2.71 (0.54, 13.55)	2.65 (0.57, 12.30)
Tertile 3 (0.271-5.96)	20 (15)	1.96 (0.57, 6.77)	4.44 (1.60, 12.28)	4.03 (1.65, 9.84)
<b>Total blood mercury (µg/L)<sup>g</sup></b>				
Quartile 1 (<0.4)	27 (9)	1.00 (referent)	1.00 (referent)	1.00 (referent)
Quartile 2 (0.4-0.8)	67 (21)	2.52 (1.16, 5.47)	2.70 (1.29, 5.67)	2.30 (1.11, 4.78)
Quartile 3 (0.9-1.5)	50 (17)	2.04 (0.95, 4.39)	2.43 (1.12, 5.27)	2.07 (0.97, 4.42)
Quartile 4 (1.6-32.8)	61 (18)	2.10 (0.98, 4.50)	2.71 (1.25, 5.86)	2.33 (1.09, 4.98)

Abbreviations: ANA, antinuclear antibody; PCBs, polychlorinated biphenyls; Hg, mercury; NHANES, National Health and Nutrition Examination Survey; OR, odds ratio.

<sup>a</sup>Weighted percent. <sup>b</sup>Models include subset with available PCB data (samples size reduced by ~6% compared to main analyses). <sup>c</sup>Adjusted for age, race/ethnicity, education, serum cotinine, selenium, omega-3 fatty acids, and an indicator for NHANES cycle for models combining data across cycles (1999-2004). <sup>d</sup>Coplanar (dioxin-like) PCB congeners included PCBs (81, 105, 118, 126, 156, 157, 167, 169); a summary measure was calculated as the sum of the products of the concentration of each serum lipid-adjusted congener and its corresponding toxic equivalency factor (TEF), which was then log-transformed. <sup>e</sup>The Prevalent PCB measure is the log-transformed sum of the lipid-adjusted values for the four most prevalent PCB congeners (PCBs 118, 138, 153, 180), three of which are non-coplanar and without defined TEFs to take into account. <sup>f</sup>NHANES 1999-2000, 1 cycle (n=424). <sup>g</sup>NHANES 1999-2004, 3 cycles (n=1281).

**Table S2.** Association between mercury exposure and ANA titer strength, among females 16-49 years in the general US population (NHANES), based on multinomial logistic regression modeling.

Mercury exposure	ANA positive n (%) <sup>a</sup>	Crude Model OR (95% CI)	Model A <sup>b</sup> OR (95% CI)	Model B <sup>c</sup> OR (95% CI)	Model C <sup>d</sup> OR (95% CI)
<b>Hair mercury (ppm)<sup>e</sup></b>					
<b>ANA negative (n=396)</b>	NA	NA	NA	NA	NA
