USP18	10.1 ± 1.3 p = 0.005 vs normals	9.0 ± 1.5 p < 0.0001 vs normals	8.7 ± 2.0 p = 0.008 vs normals	9.0 ± 1.6 p = 0.0001 vs normals	6.0 ± 0.4

Affymetrix U133 Plus 2.0 mRNA expression array data (in arbitrary expression units relative to normal standard) for interferon-inducible genes that showed differences compared to control subjects. For genes with multiple readouts, averages of all the values are used. Between-group comparisons are with the Mann-Whitney test. No significant differences between patient subgroups were identified.
