

SUPPLEMENTARY FIG. S2. Six hours of treatment with isoflurane increased the apoptosis during neural differentiation (Fig. 2). **(A)** Cell apoptosis analysis of cells during neural differentiation from mES cells treated with isoflurane or control by FACS. **(B)** Statistics of the population of apoptotic cells. Data shown are mean \pm SD ($n=3$). $**P < 0.01$. mES cells, mouse embryonic stem cells.
