

S5 Fig. Bone marrow Env-specific memory ASC assessed by ELISpot. Memory B cells secreting Env-specific IgG (A) and IgA (B) over the immunization course and 2wkpi. Comparison of Env-specific IgG and IgA memory B cells for both immunization groups at wk 53 (C) and 2wkpi (D). The gp120 group was tested against monomeric gp120 and the gp140 group against oligomeric gp140. * $p < 0.01$. Due to the large number of tests performed, only differences with p values < 0.01 are shown in panels A and B. Mean values \pm SEM are shown.
