

## SUPPLEMENTARY FIGURES.

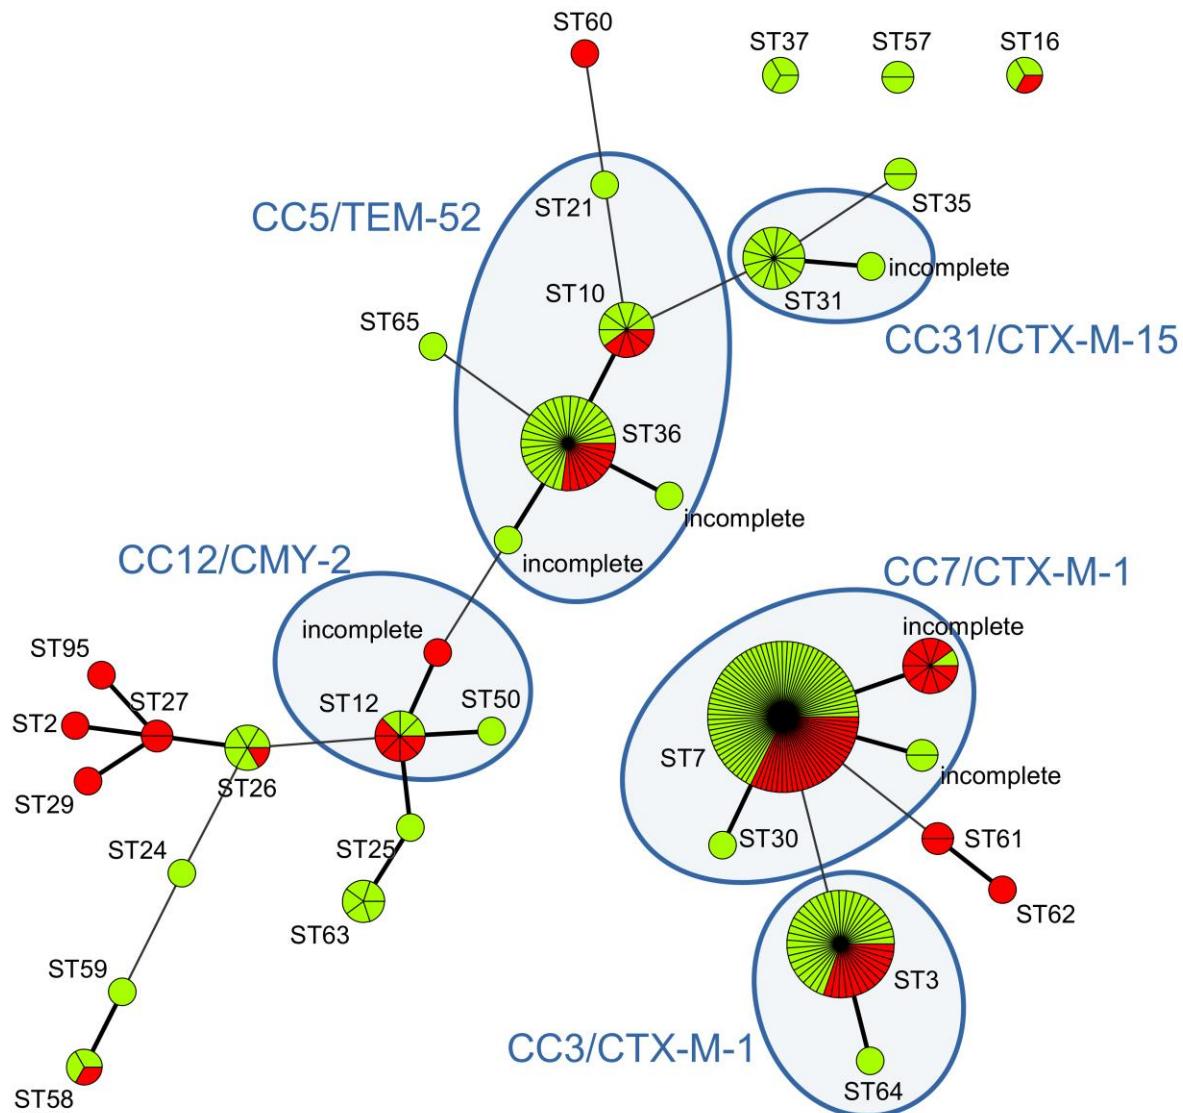

**FigS1**

pMLST analysis of 251 selected *IncI1*-Iy plasmids as visualized by Bionumerics 6.5. Plasmids with identical sequence types were assigned to one circle. Single locus variants are indicated by a thick line and double locus variants by a thin line. Sequence types belonging to one clonal complex are grouped by a blue circle. Colours indicate the animal source of the isolates containing the various plasmids.

**FigS2**

pMLST analysis of 251 selected *IncI1*-*Iy* plasmids as visualized by Bionumerics 6.5. Plasmids with identical pMLST types were assigned to one circle. Single locus variants are indicated by a thick line and double locus variants by a thin line. Sequence types belonging to one clonal complex are grouped by a blue circle. Colours indicate whether the plasmids were obtained from *E. coli* (green) or from *Salmonella* (red).

\* of IncI1 plasmids

\*\* determined as described in Materials and Methods

\*\*\* IncI1 plasmids not containing an ESBL/AmpC gene but carrying a class I integron were selected for comparison
