

Figure S4. Size distribution of immunogold-labeled Sup35p-positive vesicles. Immunogold labeling of Sup35p and negative-stain electron microscopy of EV isolated from the indicated strains was performed as described in Fig. 1B. The size distribution of immunogold-labeled Sup35p-positive vesicles was determined using the ImageJ software and represented as a boxplot showing median (middle line within each box), 25th (boxes lower boundaries) and 75th (boxes upper boundaries) percentile, minimal and maximal values (whiskers), and outliers (dots). The number of immunogold-labeled Sup35p-positive vesicles analyzed for each EV type is indicated at the bottom of the plot.
