Appendix Table A.4: Model type and fit metrics: R-squared

Cause, sequelae, or intermediate model	Model description	R-squared (prevalence)	R-squared (incidence)	R-squared (proportion)
All causes				
Communicable, maternal, neonatal, and nutritional diseases				
HIV/AIDS and tuberculosis				
Tuberculosis	mixed effects regression on case notifications and deaths to estimate incidence; compositional analysis model for proportion of all forms, smear-positive and bacteriologically positive cases; DisMod-MR 2.0 to fit between incidence, prevalence, excess mortality and cause specific mortality rates	0.76	0.92	
Tuberculosis	UNAIDS Spectrum model; DisMod-MR 2.0 and meta-analysis of mortality rates on and without ART; vital registration mortality data for concentrated epidemics			
HIV/AIDS resulting in mycobacterial infection	meta-regression relative risk data of TB by CD4 count			
HIV/AIDS resulting in other diseases				
Early HIV	Meta-analysis			
Symptomatic HIV	Meta-analysis			
AIDS with antiretroviral treatment	Meta-analysis			
AIDS without antiretroviral treatment	Meta-analysis			
Diarhea, lower respiratory, and other common infectious diseases				
Diarheal diseases	DisMod-MR 2.0 of prevalence, incidence and cause specific mortality data; remission set to reflect average duration of 5 days; counterfactual analysis of underlying etiologies	0.72		
Mild diarrehal diseases	DHS analysis: proportion of cases of diarrhea who did not seek medical care			
Moderate diarrehal diseases	DHS analysis: proportion of cases of diarrhea seeking medical care who did not have severe dehydration or seizures			
Severe diarrehal diseases	DHS analysis: proportion of cases of diarrhea seeking medical care who had severe dehydration or seizures			
Guillain-Barre syndrome due to diarrehal diseases	DisMod-MR 2.0 of incidence and remission data all GBS + meta-analysis of proportion of all cases following diarrehal disease			
Intestinal infectious diseases				
Typhoid and paratyphoid fever	(1) DisMod-MR 2.0 of incidence with crosswalk from passive to active case detection estimates; (2) assumed duration of 2 weeks		0.92	
Typhoid fever	DisMod-MR 2.0 proportion of typhoid and paratyphoid that is typhoid			0.27
Acute typhoid infection	Meta-analysis			
Severe typhoid fever	Meta-analysis			
Intestinal perforation due to typhoid	Meta-analysis			
Gastrointestinal bleeding due to typhoid	Meta-analysis			
Paratyphoid fever	DisMod-MR 2.0 proportion of typhoid and paratyphoid that is paratyphoid			0.72
Acute paratyphoid infection	Proportion from literature			
Moderate paratyphoid fever	Proportion from literature			
Severe paratyphoid fever	Proportion from literature			
Intestinal perforation due to paratyphoid	Proportion from literature			
Other intestinal infectious diseases	YLD to YLL ratio of typhoid and paratyphoid applied to YLL for other intestinal infectious diseases			
Lower respiratory infections	DisMod-MR 2.0 of prevalence data and remission setting to reflect 10 day average duration	0.96		
Moderate lower respiratory infections	remainder of all lower respiratory infections after subtraction of severe cases			
Severe lower respiratory infections	coefficient in DisMod-MR 2.0 on data points for severe lower respiratory infections			
Guillain-Barre syndrome due to lower respiratory infections	DisMod-MR 2.0 of incidence and remission data all GBS + meta-analysis of proportion of all cases following upper respiratory infection			
Upper respiratory infections	DisMod-MR 2.0 of prevalence data and remission setting to reflect 5 day average duration	0.70		
Mild upper respiratory infections	DisMod-MR 2.0 coefficient on covariate for data on moderate (tonsillitis, laryngitis, pharyngitis, tracheitis, sinusitis and epiglottitis) vs mild infections			
Moderate upper respiratory infections	DisMod-MR 2.0 coefficient on covariate for data on moderate (tonsillitis, laryngitis, pharyngitis, tracheitis, sinusitis and epiglottitis) vs mild infections			
Guillain-Barre syndrome due to upper respiratory infections	DisMod-MR 2.0 of incidence and remission data all GBS + meta-analysis of proportion of all cases following upper respiratory infection			
Otitis media		0.82		
Acute otitis media	DisMod-MR 2.0 of incidence and prevalence with remission set to reflect average duration of 2-3 weeks	0.64	0.97	
Chronic otitis media	DisMod-MR 2.0 of incidence, prevalence and remission data	0.69	0.50	
Vertigo with mild hearing loss due to chronic otitis media	Proportion of cases with vertigo from literature and multiplication of prevalence of chronic otitis media and proportion hearing loss by severity from literature			
Vertigo with mild hearing loss and ringing due to chronic otitis media	Proportion of cases with vertigo from literature and multiplication of prevalence of chronic otitis media and proportion hearing loss by severity from literature			
Mild hearing loss due to chronic otitis media	multiplication of prevalence of chronic otitis media and proportion hearing loss by severity from literature			
Mild hearing loss with ringing due to chronic otitis media	multiplication of prevalence of chronic otitis media and proportion hearing loss by severity from literature			
Vertigo with moderate hearing loss due to chronic otitis media	Proportion of cases with vertigo from literature and multiplication of prevalence of chronic otitis media and proportion hearing loss by severity from literature			
Vertigo with moderate hearing loss and ringing due to chronic otitis media	Proportion of cases with vertigo from literature and multiplication of prevalence of chronic otitis media and proportion hearing loss by severity from literature			
Moderate hearing loss due to chronic otitis media	multiplication of prevalence of chronic otitis media and proportion hearing loss by severity from literature			
Moderate hearing loss with ringing due to chronic otitis media	multiplication of prevalence of chronic otitis media and proportion hearing loss by severity from literature			
Meningitis	DisMod-MR 2.0 model for all meningitis incidence and excess mortality with remission set to reflect average duration between 3 and 6 weeks		0.75	
Pneumococcal meningitis				
Proportion of meningitis due to pneumococcus	DisMod-MR 2.0 pooling of data on proportion of meningitis due to pneumococcus			0.78
Acute pneumococcal meningitis	multiplication of proportion pneumococcal meningitis and overall meningitis prevalence			
Mild behavioral problems due to pneumococcal meningitis	(1) Incidence of overall meningitis model adjusted by excess mortality rate converted to a case fatality proportion to get incidence of meningitis survivors; (2) multiplication of incidence of meningitis survivors by proportion pneumococcal meningitis and proportion of cases of pneumococcal meningitis with long term mild impairment based on a meta-analysis; (3) stream out prevalence from incidence assuming no excess mortality risk and no remission; (4) meta-analysis of types of long term mild impairment			
Mild motor impairment due to long term due to pneumococcal meningitis	(1) Incidence of overall meningitis model adjusted by excess mortality rate converted to a case fatality proportion to get incidence of meningitis survivors; (2) multiplication of incidence of meningitis survivors by proportion pneumococcal meningitis and proportion of cases of pneumococcal meningitis with long term mild impairment based on a meta-analysis; (3) stream out prevalence from incidence assuming no excess mortality risk and no remission; (4) meta-analysis of types of long term mild impairment			
Mild motor plus cognitive impairments due to pneumococcal meningitis	(1) Incidence of overall meningitis model adjusted by excess mortality rate converted to a case fatality proportion to get incidence of meningitis survivors; (2) multiplication of incidence of meningitis survivors by proportion pneumococcal meningitis and proportion of cases of pneumococcal meningitis with long term mild impairment based on a meta-analysis; (3) stream out prevalence from incidence assuming no excess mortality risk and no remission; (4) meta-analysis of types of long term mild impairment			
Borderline intellectual disability due to pneumococcal meningitis	(1) Incidence of overall meningitis model adjusted by excess mortality rate converted to a case fatality proportion to get incidence of meningitis survivors; (2) multiplication of incidence of meningitis survivors by proportion pneumococcal meningitis and proportion of cases of pneumococcal meningitis with long term mild impairment based on a meta-analysis; (3) stream out prevalence from incidence assuming no excess mortality risk and no remission; (4) meta-analysis of types of long term mild impairment			

Appendix Table A.4: Model type and fit metrics: R-squared				
Cause, sequelae, or intermediate model	Model description	R-squared (prevalence)	R-squared (incidence)	R-squared (proportion)
Mild hearing loss due with ringing to other bacterial meningitis	(1) Incidence of overall meningitis model adjusted by excess mortality rate converted to a case fatality proportion to get incidence of meningitis survivors; (2) multiplication of incidence of meningitis survivors by proportion other bacterial meningitis and proportion of cases of other bacterial meningitis with long term mild impairment based on a meta-analysis; (3) stream out prevalence from incidence assuming no excess mortality risk and no remission; (4) meta-analysis of types of long term mild impairment; (5) apply severity split from hearing loss envelope			
Moderate hearing loss due to other bacterial meningitis	(1) Incidence of overall meningitis model adjusted by excess mortality rate converted to a case fatality proportion to get incidence of meningitis survivors; (2) multiplication of incidence of meningitis survivors by proportion other bacterial meningitis and proportion of cases of other bacterial meningitis with long term mild impairment based on a meta-analysis; (3) stream out prevalence from incidence assuming no excess mortality risk and no remission; (4) meta-analysis of types of long term mild impairment; (5) apply severity split from hearing loss envelope			
Moderate hearing loss with ringing due to other bacterial meningitis	(1) Incidence of overall meningitis model adjusted by excess mortality rate converted to a case fatality proportion to get incidence of meningitis survivors; (2) multiplication of incidence of meningitis survivors by proportion other bacterial meningitis and proportion of cases of other bacterial meningitis with long term mild impairment based on a meta-analysis; (3) stream out prevalence from incidence assuming no excess mortality risk and no remission; (4) meta-analysis of types of long term mild impairment; (5) apply severity split from hearing loss envelope			
Moderately severe hearing loss due to other bacterial meningitis	(1) Incidence of overall meningitis model adjusted by excess mortality rate converted to a case fatality proportion to get incidence of meningitis survivors; (2) multiplication of incidence of meningitis survivors by proportion other bacterial meningitis and proportion of cases of other bacterial meningitis with long term mild impairment based on a meta-analysis; (3) stream out prevalence from incidence assuming no excess mortality risk and no remission; (4) meta-analysis of types of long term mild impairment; (5) apply severity split from hearing loss envelope			
Moderately severe hearing loss with ringing due to other bacterial meningitis	(1) Incidence of overall meningitis model adjusted by excess mortality rate converted to a case fatality proportion to get incidence of meningitis survivors; (2) multiplication of incidence of meningitis survivors by proportion other bacterial meningitis and proportion of cases of other bacterial meningitis with long term mild impairment based on a meta-analysis; (3) stream out prevalence from incidence assuming no excess mortality risk and no remission; (4) meta-analysis of types of long term mild impairment; (5) apply severity split from hearing loss envelope			
Severe hearing loss due to other bacterial meningitis	(1) Incidence of overall meningitis model adjusted by excess mortality rate converted to a case fatality proportion to get incidence of meningitis survivors; (2) multiplication of incidence of meningitis survivors by proportion other bacterial meningitis and proportion of cases of other bacterial meningitis with long term mild impairment based on a meta-analysis; (3) stream out prevalence from incidence assuming no excess mortality risk and no remission; (4) meta-analysis of types of long term mild impairment; (5) apply severity split from hearing loss envelope			
Severe hearing loss with ringing due to other bacterial meningitis	(1) Incidence of overall meningitis model adjusted by excess mortality rate converted to a case fatality proportion to get incidence of meningitis survivors; (2) multiplication of incidence of meningitis survivors by proportion other bacterial meningitis and proportion of cases of other bacterial meningitis with long term mild impairment based on a meta-analysis; (3) stream out prevalence from incidence assuming no excess mortality risk and no remission; (4) meta-analysis of types of long term mild impairment; (5) apply severity split from hearing loss envelope			
Profound hearing loss due to other bacterial meningitis	(1) Incidence of overall meningitis model adjusted by excess mortality rate converted to a case fatality proportion to get incidence of meningitis survivors; (2) multiplication of incidence of meningitis survivors by proportion other bacterial meningitis and proportion of cases of other bacterial meningitis with long term mild impairment based on a meta-analysis; (3) stream out prevalence from incidence assuming no excess mortality risk and no remission; (4) meta-analysis of types of long term mild impairment; (5) apply severity split from hearing loss envelope			
Profound hearing loss with ringing due to other bacterial meningitis	(1) Incidence of overall meningitis model adjusted by excess mortality rate converted to a case fatality proportion to get incidence of meningitis survivors; (2) multiplication of incidence of meningitis survivors by proportion other bacterial meningitis and proportion of cases of other bacterial meningitis with long term mild impairment based on a meta-analysis; (3) stream out prevalence from incidence assuming no excess mortality risk and no remission; (4) meta-analysis of types of long term mild impairment; (5) apply severity split from hearing loss envelope			
Complete hearing loss due to other bacterial meningitis	(1) Incidence of overall meningitis model adjusted by excess mortality rate converted to a case fatality proportion to get incidence of meningitis survivors; (2) multiplication of incidence of meningitis survivors by proportion other bacterial meningitis and proportion of cases of other bacterial meningitis with long term mild impairment based on a meta-analysis; (3) stream out prevalence from incidence assuming no excess mortality risk and no remission; (4) meta-analysis of types of long term mild impairment; (5) apply severity split from hearing loss envelope			
Complete hearing loss with ringing due to other bacterial meningitis	(1) Incidence of overall meningitis model adjusted by excess mortality rate converted to a case fatality proportion to get incidence of meningitis survivors; (2) multiplication of incidence of meningitis survivors by proportion other bacterial meningitis and proportion of cases of other bacterial meningitis with long term mild impairment based on a meta-analysis; (3) stream out prevalence from incidence assuming no excess mortality risk and no remission; (4) meta-analysis of types of long term mild impairment; (5) apply severity split from hearing loss envelope			
Encephalitis				
Acute encephalitis	DisMod-MR 2.0 of incidence and remission set to reflect 3 week average duration		0.69	
Mild behavioral problems due to encephalitis	Assume same proportion of cases have long term mild impairment as in non-pneumococcal meningitis			
Mild motor impairment due to long term due to encephalitis	Assume same proportion of cases have long term mild impairment as in non-pneumococcal meningitis			
Mild motor plus cognitive impairments due to encephalitis	Assume same proportion of cases have long term mild impairment as in non-pneumococcal meningitis			
Borderline intellectual disability due to encephalitis	Assume same proportion of cases have long term mild impairment as in non-pneumococcal meningitis			
Monocular distance vision loss due to encephalitis	Assume same proportion of cases have long term mild impairment as in non-pneumococcal meningitis			
Moderate to severe impairment due to encephalitis	Intermediate model based on (1) incidence of overall encephalitis model adjusted by excess mortality rate converted to a case fatality proportion to get incidence of encephalitis survivors; (2) multiplication of incidence of encephalitis survivors by proportion of cases of non-pneumococcal meningitis with long term moderate to severe impairment based on a meta-analysis; (3) streaming out prevalence from incidence and SMR data from cerebral palsy literature assuming no remission		0.97	
Mild intellectual disability due to encephalitis	Assume same proportion of cases have long term moderate to severe impairments as in non-pneumococcal meningitis			
Moderate motor impairment due to encephalitis	Assume same proportion of cases have long term moderate to severe impairments as in non-pneumococcal meningitis			
Severe motor impairment due to encephalitis	Assume same proportion of cases have long term moderate to severe impairments as in non-pneumococcal meningitis			
Moderate motor plus cognitive impairments due to encephalitis	Assume same proportion of cases have long term moderate to severe impairments as in non-pneumococcal meningitis			
Severe motor plus cognitive impairments due to encephalitis	Assume same proportion of cases have long term moderate to severe impairments as in non-pneumococcal meningitis			
Epilepsy due to encephalitis	(1) assume same proportion of cases have long term moderate to severe impairments as in non-pneumococcal meningitis; (2) proportion of those with epilepsy as from meningitis meta-analysis for non-pneumococcal meningitis; (3) DisMod-MR 2.0 model to stream out prevalence using excess mortality and remission data from epilepsy envelope model		0.95	
Blindness due to encephalitis	Assume same proportion of cases have long term moderate to severe impairments as in non-pneumococcal meningitis			
Diphtheria	Natural history model of case fatality data applied to deaths from CODEM			0.87
Moderate diphtheria	Proportion from literature			
Severe diphtheria	Proportion from literature			
Whooping cough	Natural history model of incidence from notification data, case fatality and duration of 50 days	0.17		
Tetanus	Natural history model of case fatality data applied to deaths from CODEM			0.69
Severe tetanus	Natural history model of case fatality data applied to deaths from CODEM			
Mild impairment due to neonatal tetanus	proportion of neonatal tetanus cases with mild long term impairment from meta-analysis		0.98	
Mild motor impairment due to neonatal tetanus	(1) incidence from overall tetanus DisMod-MR 2.0 model multiplied by case fatality proportion implied by excess mortality rates to get incidence of neonatal tetanus survivors; (2) apply proportion of neonatal tetanus cases with mild long term impairment from meta-analysis; (3) assume constant prevalence as no excess mortality; (4) assume same distribution of mild impairments as in neonatal encephalopathy			
Mild motor plus cognitive impairments due to neonatal tetanus	(1) incidence from overall tetanus DisMod-MR 2.0 model multiplied by case fatality proportion implied by excess mortality rates to get incidence of neonatal tetanus survivors; (2) apply proportion of neonatal tetanus cases with mild long term impairment from meta-analysis; (3) assume constant prevalence as no excess mortality; (4) assume same distribution of mild impairments as in neonatal encephalopathy			
Moderate to severe impairment due to neonatal tetanus	DisMod-MR 2.0 + meta-analysis		0.98	
Moderate motor impairment due to neonatal tetanus	(1) incidence from overall tetanus DisMod-MR 2.0 model multiplied by case fatality proportion implied by excess mortality rates to get incidence of neonatal tetanus survivors; (2) apply proportion of neonatal tetanus cases with moderate to severe long term impairment from meta-analysis; (3) DisMod-MR 2.0 to stream out incidence of moderate to severe long term impairment with excess mortality from cerebral palsy literature; (4) assume same distribution of moderate to severe impairments as in neonatal encephalopathy			

Appendix Table A.4: Model type and fit metrics: R-squared				
Cause, sequelae, or intermediate model	Model description	R-squared (prevalence)	R-squared (incidence)	R-squared (proportion)
Severe motor plus cognitive impairment with blindness and epilepsy due to malaria	(1) proportion of long term neurological sequelae from literature; (2) assumed same long term impairment distribution as for neonatal encephalopathy			
Mild anemia due to malaria parasitemia (PPR)	(1) mixed-effects regression to predict mean hemoglobin; (2) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (3) calculation of overall anemia prevalence for each cause using aetiology-specific prevalence from DisMod-MR 2.0 model and aetiology-specific meta-analysis of anemia severity; (4) Bayesian contingency table modeling of severity distribution for each cause			
Moderate anemia due to malaria parasitemia (PPR)	(1) mixed-effects regression to predict mean hemoglobin; (2) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (3) calculation of overall anemia prevalence for each cause using aetiology-specific prevalence from DisMod-MR 2.0 model and aetiology-specific meta-analysis of anemia severity; (4) Bayesian contingency table modeling of severity distribution for each cause			
Severe anemia due to malaria parasitemia (PPR)	(1) mixed-effects regression to predict mean hemoglobin; (2) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (3) calculation of overall anemia prevalence for each cause using aetiology-specific prevalence from DisMod-MR 2.0 model and aetiology-specific meta-analysis of anemia severity; (4) Bayesian contingency table modeling of severity distribution for each cause			
Chagas disease	DisMod-MR 2.0 of Chagas sero-prevalence and cause-specific mortality, excess mortality (based on first iteration of prevalence model and cause-specific mortality rates) and no remission	0.88		
Acute Chagas disease	Proportion from literature			
Mild chronic digestive disease due to Chagas disease	Proportion from literature			
Moderate chronic digestive disease due to Chagas disease	Proportion from literature			
Asymptomatic Chagas disease	subtraction of prevalence of symptomatic health states from sero-prevalence			
Atrial fibrillation and flutter due to Chagas disease	Proportion from literature			
Mild heart failure due to Chagas disease	Proportion from literature and severity distribution for all heart failure from MEPS			
Moderate heart failure due to Chagas disease	Proportion from literature and severity distribution for all heart failure from MEPS			
Severe heart failure due to Chagas disease	Proportion from literature and severity distribution for all heart failure from MEPS			
Leishmaniasis				
Visceral leishmaniasis	(1) excess mortality derived from mortality to incidence ratios in countries with data on both and predicted out to country, year, age, sex; (2) DisMod-MR 2.0 of incidence and excess mortality assuming remission consistent with a three month duration		0.89	
Moderate visceral leishmaniasis	Proportion from literature			
Severe visceral leishmaniasis	Proportion from literature			
Cutaneous and mucocutaneous leishmaniasis	(1) DisMod-MR 2.0 model of incidence, zero remission and zero mortality; (2) correction of incidence for underreporting based on literature; (3) proportion with life long disfigurement based on proportion from literature for those with facial involvement and a scaling of this proportion between countries based on health system access covariate		0.95	
African trypanosomiasis	(1) apply case detection rate based on regression of incidence vs. screening coverage; (2) DISMod-MR 2.0 of reported incidence corrected for underreporting; (3) assume mean duration in treated cases is 3 months and in untreated cases is 3 years	0.85		
Disfigurement due to African trypanosomiasis	Proportion from literature			
Severe motor plus cognitive impairments due to African trypanosomiasis	Proportion from literature			
Schistosomiasis	(1) DisMod-MR 2.0 model of pre-control prevalence; (2) estimate species-specific prevalence based on country; (3) predict post-control prevalence adjusting for treatment impact (cumulative number of treatments per person at risk from WHO PCT databank) and species-specific efficacy from meta-analysis; (4) assume treatment effect same for reversible sequelae; (5) assume for advance hepatic disease, hematemesis and ascites that incidence among treated fraction of population is zero and 10% of prevalent cases die annually from the sequela	0.96		
Schistosomiasis stage 1	DisMod-MR 2.0			
Schistosomiasis stage 2	DisMod-MR 2.0			
Schistosomiasis stage 3	DisMod-MR 2.0			
Mild schistosomiasis	Proportion from literature			
Mild diarrhea due to schistosomiasis	Proportion from literature			
Hematemesis due to schistosomiasis	Proportion from literature			
Hepatomegaly due to schistosomiasis	Proportion from literature			
Ascites due to schistosomiasis	Proportion from literature			
Dysuria due to schistosomiasis	Proportion from literature			
Bladder pathology due to schistosomiasis	Proportion from literature			
Hydronephrosis due to schistosomiasis	Proportion from literature			
Mild anemia due to schistosomiasis	(1) mixed-effects regression to predict mean hemoglobin; (2) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (3) calculation of overall anemia prevalence for each cause using aetiology-specific prevalence from DisMod-MR 2.0 model and aetiology-specific meta-analysis of anemia severity; (4) Bayesian contingency table modeling of severity distribution for each cause			
Moderate anemia due to schistosomiasis	(1) mixed-effects regression to predict mean hemoglobin; (2) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (3) calculation of overall anemia prevalence for each cause using aetiology-specific prevalence from DisMod-MR 2.0 model and aetiology-specific meta-analysis of anemia severity; (4) Bayesian contingency table modeling of severity distribution for each cause			
Severe anemia due to schistosomiasis	(1) mixed-effects regression to predict mean hemoglobin; (2) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (3) calculation of overall anemia prevalence for each cause using aetiology-specific prevalence from DisMod-MR 2.0 model and aetiology-specific meta-analysis of anemia severity; (4) Bayesian contingency table modeling of severity distribution for each cause			
Cysticercosis		0.78		
Neurocysticercosis with epilepsy	(1) DisMod-MR 2.0 oflata on proportion of epilepsy patients with neurocysticercosis based on studies in endemic areas; (2) applied this proportion to epilepsy impairment envelope			
Cystic echinococcosis	DisMod-MR 2.0 of incidence from literature and inpatient hospital data on surgical cases		0.53	
Abdominal problems due to cystic echinococcosis	Proportion from literature			
Chronic respiratory disease due to cystic echinococcosis	Proportion from literature			
Epilepsy due to echinococcosis	Proportion from literature			
Lymphatic filariasis		0.93		
Prevalence of detectable microfilaria due to lymphatic filariasis	(1) DisMod-MR 2.0 for pre-control prevalence of microfilaria infection in populations at risk from LF atlas; (2) predict post-control prevalence adjusting for treatment impact (cumulative number of treatments per person at risk from WHO PCT databank)			
Lymphedema due to lymphatic filariasis	(1) DisMod-MR 2.0 for pre-control prevalence of lymphedema in populations at risk from LF atlas; (2) predict post-control prevalence adjusting for treatment impact (cumulative number of treatments per person at risk from WHO PCT databank) assuming zero incidence in the treated fraction of the population and no excess mortality among individuals with lymphedema			
Hydrocele due to lymphatic filariasis	(1) DisMod-MR 2.0 for pre-control prevalence of hydrocele in populations at risk from LF atlas; (2) predict post-control prevalence adjusting for treatment impact (cumulative number of treatments per person at risk from WHO PCT databank)			
Onchocerciasis	Based on estimates of numbers of cases supplied by expert group for GBD2010			
Asymptomatic onchocerciasis	Proportion from literature			
Mild skin disease due to onchocerciasis	Proportion from literature			
Mild skin disease without itch due to onchocerciasis	Proportion from literature			
Moderate skin disease due to onchocerciasis	Proportion from literature			
Severe skin disease due to onchocerciasis	Proportion from literature			
Severe skin disease without itch due to onchocerciasis	Proportion from literature			
Moderate vision impairment due to onchocerciasis	Proportion of cases with vision loss from literature			

Appendix Table A.4: Model type and fit metrics: R-squared				
Cause, sequelae, or intermediate model	Model description	R-squared (prevalence)	R-squared (incidence)	R-squared (proportion)
Severe vision impairment due to onchocerciasis	Proportion of cases with vision loss from literature			
Blindness due to onchocerciasis	Proportion of cases with vision loss by level of severity from literature			
Trachoma				
Vision impairment due to trachoma	DisMod-MR 2.0 of proportion of all vision loss (not blindness) in countries that are known to have trachoma	0.74		
Moderate vision impairment due to trachoma	(1) DisMod-MR 2.0 of proportion of all vision loss (not blindness) in countries that are known to have trachoma; (2) split between moderate and severe vision loss from vision loss envelope			
Severe vision impairment due to trachoma	(1) DisMod-MR 2.0 of proportion of all vision loss (not blindness) in countries that are known to have trachoma; (2) split between moderate and severe vision loss from vision loss envelope			
Blindness due to trachoma	(1) DisMod-MR 2.0 of proportion of blindness in countries that are known to have trachoma	0.52		
Dengue	(1) Mixed effects negative binomial regression of reported cases; (2) adjustment for underreporting from ratios of country random effects from (1) and empirical data on underreporting	0.95		
Moderate dengue	Meta-analysis			
Severe dengue	Meta-analysis			
Post-dengue chronic fatigue syndrome	Proportion from literature			
Yellow fever	Negative binomial regression of reported cases accounting for underreporting borrowing estimates of underreporting from dengue model			
Asymptomatic yellow fever	Meta-analysis			
Moderate yellow fever	Meta-analysis			
Severe yellow fever	Meta-analysis			
Rabies	Natural history model of deaths from CODEM divided by case fatality proportion data from literature	0.98		
Intestinal nematode infections				
Ascariasis	(1) Bayesian geostatistical models of pre-control prevalence using environmental predictor variables; (2) post-control prevalence based on modelled reduction in prevalence due to preventive chemotherapy			
Heavy infestation of ascariasis	Proportion from literature			
Mild abdominopelvic problems due to ascariasis	Proportion from literature			
Severe wasting due to ascariasis	Proportion from literature			
Asymptomatic ascariasis	Proportion from literature			
Trichuriasis	(1) Bayesian geostatistical models of pre-control prevalence using environmental predictor variables; (2) post-control prevalence based on modelled reduction in prevalence due to preventive chemotherapy			
Heavy infestation of trichuriasis	Proportion from literature			
Mild abdominopelvic problems due to trichuriasis	Proportion from literature			
Severe wasting due to trichuriasis	Proportion from literature			
Asymptomatic trichuriasis	Proportion from literature			
Hookworm disease	(1) Bayesian geostatistical models of pre-control prevalence using environmental predictor variables; (2) post-control prevalence based on modelled reduction in prevalence due to preventive chemotherapy			
Heavy infestation of hookworm	Proportion from literature			
Mild abdominopelvic problems due to hookworm disease	Proportion from literature			
Severe wasting due to hookworm disease	Proportion from literature			
Mild anemia due to hookworm disease	(1) Mixed-effects regression to predict mean hemoglobin; (2) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (3) calculation of overall anemia prevalence for each cause using aetiology-specific prevalence from DisMod-MR 2.0 model and aetiology-specific meta-analysis of anemia severity; (4) Bayesian contingency table modeling of severity distribution for each cause			
Moderate anemia due to hookworm disease	(1) Mixed-effects regression to predict mean hemoglobin; (2) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (3) calculation of overall anemia prevalence for each cause using aetiology-specific prevalence from DisMod-MR 2.0 model and aetiology-specific meta-analysis of anemia severity; (4) Bayesian contingency table modeling of severity distribution for each cause			
Severe anemia due to hookworm disease	(1) Mixed-effects regression to predict mean hemoglobin; (2) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (3) calculation of overall anemia prevalence for each cause using aetiology-specific prevalence from DisMod-MR 2.0 model and aetiology-specific meta-analysis of anemia severity; (4) Bayesian contingency table modeling of severity distribution for each cause			
Asymptomatic hookworm disease	Empirical proportion			
Food-borne trematodiasis				
Asymptomatic clonorchiasis	(1) DisMod-MR 2.0 of prevalence only; (2) assigning prevalence in countries with a known problem and national prevalence estimates; (3) disability awarded to proportion of cases with heavy infection from meta-analysis			
Asymptomatic fascioliasis	(1) DisMod-MR 2.0 of prevalence only; (2) assigning prevalence in countries with a known problem and national prevalence estimates; (3) disability awarded to proportion of cases with heavy infection from meta-analysis			
Asymptomatic intestinal fluke infection	(1) DisMod-MR 2.0 of prevalence only; (2) assigning prevalence in countries with a known problem and national prevalence estimates; (3) disability awarded to proportion of cases with heavy infection from meta-analysis			
Asymptomatic opisthorchiasis	(1) DisMod-MR 2.0 of prevalence only; (2) assigning prevalence in countries with a known problem and national prevalence estimates; (3) disability awarded to proportion of cases with heavy infection from meta-analysis			
Asymptomatic paragonimiasis	(1) DisMod-MR 2.0 of prevalence only; (2) assigning prevalence in countries with a known problem and national prevalence estimates; (3) disability awarded to proportion of cases with heavy infection from meta-analysis			
Heavy opisthorchiasis due to food-borne trematodiasis	(1) DisMod-MR 2.0 of prevalence only; (2) assigning prevalence in countries with a known problem and national prevalence estimates; (3) disability awarded to proportion of cases with heavy infection from meta-analysis			
Heavy clonorchiasis due to food-borne trematodiasis	(1) DisMod-MR 2.0 of prevalence only; (2) assigning prevalence in countries with a known problem and national prevalence estimates; (3) disability awarded to proportion of cases with heavy infection from meta-analysis			
Heavy intestinal fluke infection due to food-borne trematodiasis	(1) DisMod-MR 2.0 of prevalence only; (2) assigning prevalence in countries with a known problem and national prevalence estimates; (3) disability awarded to proportion of cases with heavy infection from meta-analysis			
Heavy fascioliasis due to food-borne trematodiasis	(1) DisMod-MR 2.0 of prevalence only; (2) assigning prevalence in countries with a known problem and national prevalence estimates; (3) disability awarded to proportion of cases with heavy infection from meta-analysis			
Heavy paragonimiasis due to food-borne trematodiasis	(1) DisMod-MR 2.0 of prevalence only; (2) assigning prevalence in countries with a known problem and national prevalence estimates; (3) disability awarded to proportion of cases with heavy infection from meta-analysis			
Cerebral paragonimiasis	(1) DisMod-MR 2.0 of prevalence only; (2) assigning prevalence in countries with a known problem and national prevalence estimates; (3) disability awarded to proportion of cases with cerebral paragonimiasis from literature			
Clonorchiasis due to food-borne trematodiasis all countries	DisMod-MR 2.0	0.81		
Fascioliasis due to food-borne trematodiasis all countries	DisMod-MR 2.0	1.00		
Intestinal fluke infection due to food-borne trematodiasis all countries	DisMod-MR 2.0	0.64		
Opisthorchiasis due to food-borne trematodiasis all countries	DisMod-MR 2.0	1.00		
Paragonimiasis due to food-borne trematodiasis all countries	DisMod-MR 2.0	0.66		
Other neglected tropical diseases				
Acute infection due to other neglected tropical diseases	Ratio of YLD from acute NTD infections to YLL for those conditions multiplied by YLL estimated for other NTD from CODEM modelling			
Mild anemia due to other neglected tropical diseases	(1) Mixed-effects regression to predict mean hemoglobin; (2) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (3) calculation of overall anemia prevalence for each cause using aetiology-specific prevalence from DisMod-MR 2.0 model and aetiology-specific meta-analysis of anemia severity; (4) Bayesian contingency table modeling of severity distribution for each cause			
Moderate anemia due to other neglected tropical diseases	(1) Mixed-effects regression to predict mean hemoglobin; (2) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (3) calculation of overall anemia prevalence for each cause using aetiology-specific prevalence from DisMod-MR 2.0 model and aetiology-specific meta-analysis of anemia severity; (4) Bayesian contingency table modeling of severity distribution for each cause			

Appendix Table A.4: Model type and fit metrics: R-squared				
Cause, sequelae, or intermediate model	Model description	R-squared (prevalence)	R-squared (incidence)	R-squared (proportion)
Severe anemia due to other neglected tropical diseases	(1) Mixed-effects regression to predict mean hemoglobin; (2) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (3) calculation of overall anemia prevalence for each cause using aetiology-specific prevalence from DisMod-MR 2.0 model and aetiology-specific meta-analysis of anemia severity; (4) Bayesian contingency table modeling of severity distribution for each cause			
Maternal disorders				
Maternal hemorrhage	(1) DisMod-MR 2.0 of incidence per live birth; (2) multiplication of incidence by age-specific fertility rate to get incidence per population; (3) prevalence by multiplication of ..day duration		0.91	
Maternal hemorrhage (< 1L blood lost)	Meta-analysis			
Maternal hemorrhage (> 1L blood lost)	Meta-analysis			
Mild anemia due to maternal hemorrhage	(1) Mixed-effects regression to predict mean hemoglobin; (2) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (3) calculation of overall anemia prevalence for each cause using aetiology-specific prevalence from DisMod-MR 2.0 model and aetiology-specific meta-analysis of anemia severity; (4) Bayesian contingency table modeling of severity distribution for each cause			
Moderate anemia due to maternal hemorrhage	(1) Mixed-effects regression to predict mean hemoglobin; (2) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (3) calculation of overall anemia prevalence for each cause using aetiology-specific prevalence from DisMod-MR 2.0 model and aetiology-specific meta-analysis of anemia severity; (4) Bayesian contingency table modeling of severity distribution for each cause			
Severe anemia due to maternal hemorrhage	(1) Mixed-effects regression to predict mean hemoglobin; (2) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (3) calculation of overall anemia prevalence for each cause using aetiology-specific prevalence from DisMod-MR 2.0 model and aetiology-specific meta-analysis of anemia severity; (4) Bayesian contingency table modeling of severity distribution for each cause			
Maternal sepsis and other maternal infections				
Puerperal sepsis	(1) DisMod-MR 2.0 of incidence per live birth; (2) multiplication of incidence by age-specific fertility rate to get incidence per population; (3) prevalence by multiplication of ..day duration		0.77	
Other maternal infections	(1) DisMod-MR 2.0 of incidence per live birth; (2) multiplication of incidence by age-specific fertility rate to get incidence per population; (3) prevalence by multiplication of ..day duration		0.67	
Infertility due to puerperal sepsis	(1) assume same proportion of risk of infertility after pelvic inflammatory disease applies to puerperal sepsis; (2) DisMod-MR 2.0 of incidence infertility after puerperal sepsis to stream out prevalence until age 50			
Maternal hypertensive disorders	(1) DisMod-MR 2.0 of incidence per live birth; (2) multiplication of incidence by age-specific fertility rate to get incidence per population; (3) prevalence by multiplication of ..day duration		0.72	
Other hypertensive disorders of pregnancy	Proportion from literature			
Severe pre-eclampsia	Proportion from literature			
Long term sequelae of severe pre-eclampsia	Meta-analysis			
Eclampsia	(1) DisMod-MR 2.0 of incidence per live birth; (2) multiplication of incidence by age-specific fertility rate to get incidence per population; (3) prevalence by multiplication of ..day duration		0.69	
Long term sequelae of eclampsia	Meta-analysis			
Obstructed labor				
Obstructed labor, acute event	(1) DisMod-MR 2.0 of incidence per live birth; (2) multiplication of incidence by age-specific fertility rate to get incidence per population; (3) prevalence by multiplication of ..day duration		0.82	
Fistula	DisMod-MR 2.0 of prevalence, incidence, remission and excess mortality	0.69		
Rectovaginal fistula	Proportion from literature			
Vesicovaginal fistula	Proportion from literature			
Complications of abortion				
Maternal abortive outcome	(1) DisMod-MR 2.0 of incidence per live birth; (2) multiplication of incidence by age-specific fertility rate to get incidence per population; (3) prevalence by multiplication of ..day duration		0.42	
Other maternal disorders	YLD to YLL ratio for stated maternal disorders multiplied by YLL from other maternal causes from CODEM			
Neonatal disorders				
Preterm birth complications	(1) mixed effect models of birth prevalence all preterm births by three gestational age categories: <28 weeks; 28-31.9 weeks and 32-36.9 weeks; (2) mixed effects models of case fatality proportion in first 28 days, proportion with mild long term impairment and proportion with moderate to severe long term impairment, each for three gestational age categories; (3) DisMod-MR 2.0 to stream out prevalence of moderate to severe long term problems from birth prevalence x (1- case fatality proportion) x probability of long term impairment and SMR data from cerebral palsy literature; 4) for mild impairment we assume no excess mortality and hence keep birth prevalence constant at all ages; (5) severity distribution between sequelae and combinations of sequelae from literature			
Asymptomatic retinopathy of prematurity	Meta-analysis			
Mild vision impairment due to retinopathy of prematurity	Meta-analysis			
Moderate vision impairment due to retinopathy of prematurity	Meta-analysis			
Severe vision impairment due to retinopathy of prematurity	Meta-analysis			
Blindness due to retinopathy of prematurity	Meta-analysis			
Mild motor impairment due to neonatal preterm birth complications <28wks	Proportion from literature			
Mild motor plus cognitive impairments due to neonatal preterm birth complications <28wks	Proportion from literature			
Mild motor impairment due to neonatal preterm birth complications 28-32wks	Proportion from literature			
Mild motor plus cognitive impairments due to neonatal preterm birth complications 28-32wks	Proportion from literature			
Mild motor impairment due to neonatal preterm birth complications 32-36wks	Proportion from literature			
Mild motor plus cognitive impairments due to neonatal preterm birth complications 32-36wks	Proportion from literature			
Moderate to severe impairment due to neonatal preterm birth complications <28wks	(1) mixed effect models of birth prevalence all preterm births <28 weeks; (2) mixed effects models of case fatality proportion in first 28 days and proportion with moderate to severe long term impairment; (3) DisMod-MR 2.0 to stream out prevalence of moderate to severe long term problems from birth prevalence x (1- case fatality proportion) x probability of long term impairment and SMR data from cerebral palsy literature	0.83		
Moderate motor impairment due to neonatal preterm birth complications <28wks	Proportion from literature			
Moderate motor impairment with blindness due to neonatal preterm birth complications <28wks	Proportion from literature			
Moderate motor impairment with epilepsy due to neonatal preterm birth complications <28wks	Proportion from literature			
Moderate motor impairment with blindness and epilepsy due to neonatal preterm birth complications <28wks	Proportion from literature			
Moderate motor plus cognitive impairment with blindness due to neonatal preterm birth complications <28wks	Proportion from literature			
Moderate motor plus cognitive impairment with epilepsy due to neonatal preterm birth complications <28wks	Proportion from literature			
Moderate motor plus cognitive impairment with blindness and epilepsy due to neonatal preterm birth complications <28wks	Proportion from literature			
Severe motor impairment due to neonatal preterm birth complications <28wks	Proportion from literature			
Severe motor impairment with blindness due to neonatal preterm birth complications <28wks	Proportion from literature			

Appendix Table A.4: Model type and fit metrics: R-squared				
Cause, sequelae, or intermediate model	Model description	R-squared (prevalence)	R-squared (incidence)	R-squared (proportion)
Severe motor impairment with epilepsy due to neonatal preterm birth complications <28wks	Proportion from literature			
Severe motor impairment with blindness and epilepsy due to neonatal preterm birth complications <28wks	Proportion from literature			
Severe motor plus cognitive impairment with blindness due to neonatal preterm birth complications <28wks	Proportion from literature			
Severe motor plus cognitive impairment with epilepsy due to neonatal preterm birth complications <28wks	Proportion from literature			
Severe motor plus cognitive impairment with blindness and epilepsy due to neonatal preterm birth complications <28wks	Proportion from literature			
Moderate to severe impairment due to neonatal preterm birth complications 28-32wks	(1) mixed effect models of birth prevalence all preterm births 28-31.9 weeks; (2) mixed effects models of case fatality proportion in first 28 days and proportion with moderate to severe long term impairment; (3) DisMod-MR 2.0 to stream out prevalence of moderate to severe long term problems from birth prevalence x (1- case fatality proportion) x probability of long term impairment and SMR data from cerebral palsy literature	0.88		
Moderate motor impairment due to neonatal preterm birth complications 28-32wks	Proportion from literature			
Moderate motor impairment with blindness due to neonatal preterm birth complications 28-32wks	Proportion from literature			
Moderate motor impairment with epilepsy due to neonatal preterm birth complications 28-32wks	Proportion from literature			
Moderate motor impairment with blindness and epilepsy due to neonatal preterm birth complications 28-32wks	Proportion from literature			
Moderate motor plus cognitive impairment with blindness due to neonatal preterm birth complications 28-32wks	Proportion from literature			
Moderate motor plus cognitive impairment with epilepsy due to neonatal preterm birth complications 28-32wks	Proportion from literature			
Moderate motor plus cognitive impairment with blindness and epilepsy due to neonatal preterm birth complications 28-32wks	Proportion from literature			
Severe motor impairment due to neonatal preterm birth complications 28-32wks	Proportion from literature			
Severe motor impairment with blindness due to neonatal preterm birth complications 28-32wks	Proportion from literature			
Severe motor impairment with epilepsy due to neonatal preterm birth complications 28-32wks	Proportion from literature			
Severe motor impairment with blindness and epilepsy due to neonatal preterm birth complications 28-32wks	Proportion from literature			
Severe motor plus cognitive impairment with blindness due to neonatal preterm birth complications 28-32wks	Proportion from literature			
Severe motor plus cognitive impairment with epilepsy due to neonatal preterm birth complications 28-32wks	Proportion from literature			
Severe motor plus cognitive impairment with blindness and epilepsy due to neonatal preterm birth complications 28-32wks	Proportion from literature			
Moderate to severe impairment due to neonatal preterm birth complications 32-36wks	(1) mixed effect models of birth prevalence all preterm births 32-36.9 weeks; (2) mixed effects models of case fatality proportion in first 28 days and proportion with moderate to severe long term impairment; (3) DisMod-MR 2.0 to stream out prevalence of moderate to severe long term problems from birth prevalence x (1- case fatality proportion) x probability of long term impairment and SMR data from cerebral palsy literature	0.72		
Moderate motor impairment due to neonatal preterm birth complications 32-36wks	Proportion from literature			
Moderate motor impairment with blindness due to neonatal preterm birth complications 32-36wks	Proportion from literature			
Moderate motor impairment with epilepsy due to neonatal preterm birth complications 32-36wks	Proportion from literature			
Moderate motor impairment with blindness and epilepsy due to neonatal preterm birth complications 32-36wks	Proportion from literature			
Moderate motor plus cognitive impairment with blindness due to neonatal preterm birth complications 32-36wks	Proportion from literature			
Moderate motor plus cognitive impairment with epilepsy due to neonatal preterm birth complications 32-36wks	Proportion from literature			
Moderate motor plus cognitive impairment with blindness and epilepsy due to neonatal preterm birth complications 32-36wks	Proportion from literature			
Severe motor impairment due to neonatal preterm birth complications 32-36wks	Proportion from literature			
Severe motor impairment with blindness due to neonatal preterm birth complications 32-36wks	Proportion from literature			
Severe motor impairment with epilepsy due to neonatal preterm birth complications 32-36wks	Proportion from literature			
Severe motor impairment with blindness and epilepsy due to neonatal preterm birth complications 32-36wks	Proportion from literature			
Severe motor plus cognitive impairment with blindness due to neonatal preterm birth complications 32-36wks	Proportion from literature			
Severe motor plus cognitive impairment with epilepsy due to neonatal preterm birth complications 32-36wks	Proportion from literature			
Severe motor plus cognitive impairment with blindness and epilepsy due to neonatal preterm birth complications 32-36wks	Proportion from literature			
Neonatal encephalopathy due to birth asphyxia and trauma	(1) mixed effect models of birth prevalence, case fatality proportion in first 28 days, proportion with mild long term impairment and proportion with moderate to severe long term impairment; (2) for mild impairment we assume no excess mortality and hence keep birth prevalence constant at all ages; 3) DisMod-MR 2.0 to stream out prevalence of moderate to severe long term problems from birth prevalence x (1- case fatality proportion) x probability of long term impairment and SMR data from cerebral palsy literature; (4) severity distribution between sequelae and combinations of sequelae from literature			
Mild motor plus cognitive impairments due to neonatal encephalopathy due to birth asphyxia and trauma	Proportion from literature			
Mild motor impairment due to neonatal encephalopathy due to birth asphyxia and trauma	Proportion from literature			

Appendix Table A.4: Model type and fit metrics: R-squared				
Cause, sequelae, or intermediate model	Model description	R-squared (prevalence)	R-squared (incidence)	R-squared (proportion)
Moderate to severe impairment due to neonatal encephalopathy due to birth asphyxia and trauma	(1) mixed effect models of birth prevalence, case fatality proportion in first 28 days and proportion with moderate to severe long term impairment; (2) DisMod-MR 2.0 to stream out prevalence of moderate to severe long term problems from birth prevalence x (1- case fatality proportion) x probability of long term impairment and SMR data from cerebral palsy literature	0.99		
Moderate motor impairment due to neonatal encephalopathy due to birth asphyxia and trauma	Proportion from literature			
Moderate motor impairment with blindness due to neonatal encephalopathy due to birth asphyxia and trauma	Proportion from literature			
Moderate motor impairment with epilepsy due to neonatal encephalopathy due to birth asphyxia and trauma	Proportion from literature			
Moderate motor impairment with blindness and epilepsy due to neonatal encephalopathy due to birth asphyxia and trauma	Proportion from literature			
Moderate motor plus cognitive impairment with blindness due to neonatal encephalopathy due to birth asphyxia and trauma	Proportion from literature			
Moderate motor plus cognitive impairment with epilepsy due to neonatal encephalopathy due to birth asphyxia and trauma	Proportion from literature			
Moderate motor plus cognitive impairment with blindness and epilepsy due to neonatal encephalopathy due to birth asphyxia and trauma	Proportion from literature			
Severe motor impairment due to neonatal encephalopathy due to birth asphyxia and trauma	Proportion from literature			
Severe motor impairment with blindness due to neonatal encephalopathy due to birth asphyxia and trauma	Proportion from literature			
Severe motor impairment with epilepsy due to neonatal encephalopathy due to birth asphyxia and trauma	Proportion from literature			
Severe motor impairment with blindness and epilepsy due to neonatal encephalopathy due to birth asphyxia and trauma	Proportion from literature			
Severe motor plus cognitive impairment with blindness due to neonatal encephalopathy due to birth asphyxia and trauma	Proportion from literature			
Severe motor plus cognitive impairment with epilepsy due to neonatal encephalopathy due to birth asphyxia and trauma	Proportion from literature			
Severe motor plus cognitive impairment with blindness and epilepsy due to neonatal encephalopathy due to birth asphyxia and trauma	Proportion from literature			
Neonatal sepsis and other neonatal infections				
Severe infection due to neonatal sepsis and other neonatal infections	Natural history model of deaths from CODEM divided by 28-day case fatality proportion data from neonatal meningitis literature	0.97		
Hemolytic disease and other neonatal jaundice	1) mixed effects models of prevalence of Rh negativity; Rhogam doses distributed to countries in 2010; and proportion of children who are not firstborn; 2) proportion of Rh-incompatibility exposed who develop kernicterus from literature; 3) proportions from literature on risk of extreme hyperbilirubinemia in babies born with G6PD, pre-term babies and all other babies; 4) proportions from literature on risk of kernicterus in babies with extreme hyperbilirubinemia; 5) DisMod-MR 2.0 to stream out prevalence of moderate to severe long term outcomes from data on birth prevalence of kernicterus (steps 1-4) and SMR data from cerebral palsy literature			
Long-term, moderate, or severe consequences due to neonatal jaundice	DisMod-MR 2.0	0.78		
Moderate motor impairment due to hemolytic disease and other neonatal jaundice	Proportion from literature			
Moderate motor impairment with blindness due to hemolytic disease and other neonatal jaundice	Proportion from literature			
Moderate motor impairment with epilepsy due to hemolytic disease and other neonatal jaundice	Proportion from literature			
Moderate motor impairment with blindness and epilepsy due to hemolytic disease and other neonatal jaundice	Proportion from literature			
Moderate motor plus cognitive impairment with blindness due to hemolytic disease and other neonatal jaundice	Proportion from literature			
Moderate motor plus cognitive impairment with epilepsy due to hemolytic disease and other neonatal jaundice	Proportion from literature			
Moderate motor plus cognitive impairment with blindness and epilepsy due to hemolytic disease and other neonatal jaundice	Proportion from literature			
Severe motor impairment severe due to hemolytic disease and other neonatal jaundice	Proportion from literature			
Severe motor impairment with blindness due to hemolytic disease and other neonatal jaundice	Proportion from literature			
Severe motor impairment with epilepsy due to hemolytic disease and other neonatal jaundice	Proportion from literature			
Severe motor impairment with blindness and epilepsy due to hemolytic disease and other neonatal jaundice	Proportion from literature			
Severe motor plus cognitive impairment with blindness due to hemolytic disease and other neonatal jaundice	Proportion from literature			
Severe motor plus cognitive impairment with epilepsy due to hemolytic disease and other neonatal jaundice	Proportion from literature			
Severe motor plus cognitive impairment with blindness and epilepsy due to hemolytic disease and other neonatal jaundice	Proportion from literature			
Other neonatal disorders	YLD to YLL ratio for stated neonatal disorders applied to YLL of other neonatal conditions from CODEM analyses			
Nutritional deficiencies				
Protein-energy malnutrition				
Kwashiorkor due to protein-energy malnutrition	Natural history model of CODEM deaths, case fatality and average duration			
Marasmus due to protein-energy malnutrition	Natural history model of CODEM deaths, case fatality and average duration			
Severe wasting due to protein-energy malnutrition	Gaussian process regression of anthropometric data of prevalence 3 z scores below mean on weight for height			
Iodine deficiency				
Goiter due to iodine deficiency	DisMod-MR 2.0 of prevalence only	0.70		
Visible goiter without symptoms	Proportion from literature			
Visible goiter without heart failure due to iodine deficiency	Proportion from literature			

Appendix Table A.4: Model type and fit metrics: R-squared				
Cause, sequelae, or intermediate model	Model description	R-squared (prevalence)	R-squared (incidence)	R-squared (proportion)
Visible goiter with mild heart failure due to iodine deficiency	Proportion of visible goitre from literature and for heart failure: (1) DisMod-MR 2.0 of prevalence, incidence, no remission and excess mortality of all heart failure; (2) separate DisMod-MR 2.0 model for the proportion of all heart failure due to endocarditis (3) MEPS analysis of severity distribution of all heart failure			
Visible goiter with moderate heart failure due to iodine deficiency	Proportion of visible goitre from literature and for heart failure: (1) DisMod-MR 2.0 of prevalence, incidence, no remission and excess mortality of all heart failure; (2) separate DisMod-MR 2.0 model for the proportion of all heart failure due to endocarditis (3) MEPS analysis of severity distribution of all heart failure			
Visible goiter with severe heart failure due to iodine deficiency	Proportion of visible goitre from literature and for heart failure: (1) DisMod-MR 2.0 of prevalence, incidence, no remission and excess mortality of all heart failure; (2) separate DisMod-MR 2.0 model for the proportion of all heart failure due to endocarditis (3) MEPS analysis of severity distribution of all heart failure			
Visible goiter with signs and symptoms	Proportion from literature			
Intellectual disability due to iodine deficiency	DisMod-MR 2.0		0.97	
Severe intellectual disability due to iodine deficiency	(1) regression model of ratio of cretinism incidence to goitre prevalence; (2) DisMod-MR 2.0 of incidence from step (1) to stream out prevalence; (3) proportion of severe and profound intellectual disability from envelope of intellectual disability			
Profound intellectual disability due to iodine deficiency	(1) regression model of ratio of cretinism incidence to goitre prevalence; (2) DisMod-MR 2.0 of incidence from step (1) to stream out prevalence; (3) proportion of severe and profound intellectual disability from envelope of intellectual disability			
Vitamin A deficiency				
Vision loss due to vitamin A deficiency	DisMod-MR 2.0 of proportion of all vision loss in countries that are known to have vitamin A deficiency	0.46		
Moderate vision impairment loss due to vitamin A deficiency	(1) DisMod-MR 2.0 of proportion of all vision loss in countries that are known to have vitamin A deficiency; (2) split between moderate and severe vision loss and blindness from vision loss envelope			
Severe vision impairment loss due to vitamin A deficiency	(1) DisMod-MR 2.0 of proportion of all vision loss in countries that are known to have vitamin A deficiency; (2) split between moderate and severe vision loss and blindness from vision loss envelope			
Blindness due to vitamin A deficiency	(1) DisMod-MR 2.0 of proportion of all vision loss in countries that are known to have vitamin A deficiency; (2) split between moderate and severe vision loss and blindness from vision loss envelope			
Iron-deficiency anemia				
Mild iron-deficiency anemia	(1) Mixed-effects regression to predict mean hemoglobin; (2) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (3) age- and sex-specific redistribution to determine aetiology-specific overall anemia prevalence; (4) Bayesian contingency table modeling of severity distribution for each cause			
Moderate iron-deficiency anemia	(1) Mixed-effects regression to predict mean hemoglobin; (2) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (3) age- and sex-specific redistribution to determine aetiology-specific overall anemia prevalence; (4) Bayesian contingency table modeling of severity distribution for each cause			
Severe iron-deficiency anemia	(1) Mixed-effects regression to predict mean hemoglobin; (2) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (3) age- and sex-specific redistribution to determine aetiology-specific overall anemia prevalence; (4) Bayesian contingency table modeling of severity distribution for each cause			
Mild heart failure due to iron-deficiency anemia	(1) DisMod-MR 2.0 of prevalence, incidence, no remission and excess mortality of all heart failure; (2) separate DisMod-MR 2.0 model for the proportion of all heart failure due to endocarditis (3) MEPS analysis of severity distribution of all heart failure			
Moderate heart failure due to iron-deficiency anemia	(1) DisMod-MR 2.0 of prevalence, incidence, no remission and excess mortality of all heart failure; (2) separate DisMod-MR 2.0 model for the proportion of all heart failure due to endocarditis (3) MEPS analysis of severity distribution of all heart failure			
Severe heart failure due to iron-deficiency anemia	(1) DisMod-MR 2.0 of prevalence, incidence, no remission and excess mortality of all heart failure; (2) separate DisMod-MR 2.0 model for the proportion of all heart failure due to endocarditis (3) MEPS analysis of severity distribution of all heart failure			
Other nutritional deficiencies	YLD to YLL ratio of protein-energy malnutrition applied to YLL for other nutritional disorders			
Other communicable, maternal, neonatal, and nutritional diseases				
Sexually transmitted diseases excluding HIV				
Syphilis				
Adult tertiary syphilis	DisMod-MR 2.0	0.71		
Chlamydial infection	DisMod-MR 2.0 of incidence	0.56		
Asymptomatic chlamydial infection	Meta-analysis			
Mild chlamydial infection	Meta-analysis			
Epididymo-orchitis due to chlamydial infection	Meta-analysis			
Pelvic inflammatory diseases due to chlamydial infection	(1) DisMod-MR 2.0 incidence all pelvic inflammatory disease with remission setting reflecting average duration of 3-4 weeks; (2) DisMod-MR 2.0 proportion PID due to chlamydia			0.72
Moderate pelvic inflammatory diseases due to chlamydial infection	Meta-analysis			
Severe pelvic inflammatory diseases due to chlamydial infection	Meta-analysis			
Primary infertility due to chlamydial infection	(1) proportion of risk of infertility from literature applied to incidence of PID DisMod-MR 2.0 model; (2) prevalence of infertility streamed out from incidence in step (1) across fertile age range; (3) after subtracting causes that only cause primary infertility (Turner syndrome) or secondary infertility (maternal sepsis) the ratio of the remaining prevalence of primary and secondary infertility is applied to the prevalence of infertility from step (2)			
Secondary infertility due to chlamydial infection	(1) proportion of risk of infertility from literature applied to incidence of PID DisMod-MR 2.0 model; (2) prevalence of infertility streamed out from incidence in step (1) across fertile age range; (3) after subtracting causes that only cause primary infertility (Turner syndrome) or secondary infertility (maternal sepsis) the ratio of the remaining prevalence of primary and secondary infertility is applied to the prevalence of infertility from step (2)			
Gonococcal infection	DisMod-MR 2.0	0.67		
Asymptomatic gonococcal infection	Meta-analysis			
Mild gonococcal infection	Meta-analysis			
Epididymo-orchitis due to gonococcal infection	Meta-analysis			
Pelvic inflammatory diseases due to gonococcal infection	(1) DisMod-MR 2.0 incidence all pelvic inflammatory disease with remission setting reflecting average duration of 3-4 weeks; (2) DisMod-MR 2.0 proportion PID due to gonorrhoea			0.44
Moderate pelvic inflammatory diseases due to gonococcal infection	Meta-analysis			
Severe pelvic inflammatory diseases due to gonococcal infection	Meta-analysis			
Primary infertility due to gonococcal infection	(1) proportion of risk of infertility from literature applied to incidence of PID DisMod-MR 2.0 model; (2) prevalence of infertility streamed out from incidence in step (1) across fertile age range; (3) after subtracting causes that only cause primary infertility (Turner syndrome) or secondary infertility (maternal sepsis) the ratio of the remaining prevalence of primary and secondary infertility is applied to the prevalence of infertility from step (2)			
Secondary infertility due to gonococcal infection	(1) proportion of risk of infertility from literature applied to incidence of PID DisMod-MR 2.0 model; (2) prevalence of infertility streamed out from incidence in step (1) across fertile age range; (3) after subtracting causes that only cause primary infertility (Turner syndrome) or secondary infertility (maternal sepsis) the ratio of the remaining prevalence of primary and secondary infertility is applied to the prevalence of infertility from step (2)			
Trichomoniasis	DisMod-MR 2.0	0.71		
Asymptomatic trichomoniasis infection	Meta-analysis			
Acute trichomoniasis infection	Meta-analysis			
Genital herpes	DisMod-MR 2.0	0.62	0.44	
Asymptomatic genital herpes	Meta-analysis			
Symptomatic genital herpes	Meta-analysis			
Moderate infection due to initial genital herpes episode	Meta-analysis			
Other sexually transmitted diseases				
Pelvic inflammatory diseases due to other sexually transmitted diseases	(1) DisMod-MR 2.0 incidence all pelvic inflammatory disease with remission setting reflecting average duration of 3-4 weeks; (2) DisMod-MR 2.0 proportion PID due to other STDs			0.41

Appendix Table A.4: Model type and fit metrics: R-squared				
Cause, sequelae, or intermediate model	Model description	R-squared (prevalence)	R-squared (incidence)	R-squared (proportion)
Moderate pelvic inflammatory diseases due to other sexually transmitted diseases	Meta-analysis			
Severe pelvic inflammatory diseases due to other sexually transmitted diseases	Meta-analysis			
Primary infertility due to other sexually transmitted diseases	(1) proportion of risk of infertility from literature applied to incidence of PID DisMod-MR 2.0 model; (2) prevalence of infertility streamed out from incidence in step (1) across fertile age range; (3) after subtracting causes that only cause primary infertility (Turner syndrome) or secondary infertility (maternal sepsis) the ratio of the remaining prevalence of primary and secondary infertility is applied to the prevalence of infertility from step (2)			
Secondary infertility due to other sexually transmitted diseases	(1) proportion of risk of infertility from literature applied to incidence of PID DisMod-MR 2.0 model; (2) prevalence of infertility streamed out from incidence in step (1) across fertile age range; (3) after subtracting causes that only cause primary infertility (Turner syndrome) or secondary infertility (maternal sepsis) the ratio of the remaining prevalence of primary and secondary infertility is applied to the prevalence of infertility from step (2)			
Hepatitis				
Hepatitis A	catalytic Binomial Model of sero-prevalence	0.34		
Asymptomatic acute hepatitis A	Meta-analysis			
Mild acute hepatitis A	Meta-analysis of proportion symptomatic and proportion from literature on level of severity			
Moderate acute hepatitis A	Meta-analysis of proportion symptomatic and proportion from literature on level of severity			
Severe acute hepatitis A	Meta-analysis of proportion symptomatic and proportion from literature on level of severity			
Hepatitis B	(1) DisMod-MR 2.0 of seroprevalence Hb surface antigen; (2) division of (1) results by age-specific proportions who become chronic carrier; (3) assumed duration of 6 weeks for symptomatic cases	0.70		
Asymptomatic acute hepatitis B	Proportion from literature			
Moderate acute hepatitis B	Proportion from literature			
Severe acute hepatitis B	Proportion from literature			
Chronic Hepatitis B	Meta-analysis			
Hepatitis C	(1) DisMod-MR 2.0 of seroprevalence of anti-HCV; (3) assumed duration of 6 weeks for symptomatic cases	0.97		
Asymptomatic acute hepatitis C	Empirical proportion			
Moderate acute hepatitis C	Empirical proportion			
Severe acute hepatitis C	Empirical proportion			
Chronic Hepatitis C	Meta-analysis			
Hepatitis E	(1) DisMod-MR 2.0 of seroprevalence of anti hepatitis E; (2) assumed duration of 4 weeks in those symptomatic	0.60		
Asymptomatic acute hepatitis E	Empirical proportion			
Moderate acute hepatitis E	Empirical proportion			
Severe acute hepatitis E	Empirical proportion			
Leprosy	DisMod-MR 2.0		0.96	
Disfigurement level 1 due to leprosy	Empirical proportion			
Disfigurement level 2 due to leprosy	Empirical proportion			
Other infectious diseases				
Acute other infectious diseases	YLD to YLL ratio for all acute infectious disease health states applied to YLL from acute other infectious diseases			
Mild anemia due to other infectious diseases	(1) Mixed-effects regression to predict mean hemoglobin; (2) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (3) age- and sex-specific redistribution to determine aetiology-specific overall anemia prevalence; (4) Bayesian contingency table modeling of severity distribution for each cause			
Moderate anemia due to other infectious diseases	(1) Mixed-effects regression to predict mean hemoglobin; (2) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (3) age- and sex-specific redistribution to determine aetiology-specific overall anemia prevalence; (4) Bayesian contingency table modeling of severity distribution for each cause			
Severe anemia due to other infectious diseases	(1) Mixed-effects regression to predict mean hemoglobin; (2) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (3) age- and sex-specific redistribution to determine aetiology-specific overall anemia prevalence; (4) Bayesian contingency table modeling of severity distribution for each cause			
Guillain-Barré syndrome due to other infectious diseases	DisMod-MR 2.0 of incidence and remission data all GBS + meta-analysis of proportion of all cases following other infectious disease			
Non-communicable diseases				
Neoplasms				
Esophageal cancer	(1) custom model to generate incidence using incidence and mortality to incidence ratios from cancer registries and deaths estimated in CODEM; (2) prevalence estimated from survival data Duration based on literature review		0.97	
Diagnosis and primary therapy phase of esophageal cancer	Duration by subtraction of sum of durations of the other three health states in fatal cases and by subtraction from 10 years for those who survive			
Controlled phase of esophageal cancer	Duration based on SEER data			
Metastatic phase of esophageal cancer	Last month of life in fatal cases			
Terminal phase of esophageal cancer	Last month of life in fatal cases			
Stomach cancer	(1) custom model to generate incidence using incidence and mortality to incidence ratios from cancer registries and deaths estimated in CODEM; (2) prevalence estimated from survival data Duration based on literature review		0.94	
Diagnosis and primary therapy phase of stomach cancer	Duration by subtraction of sum of durations of the other three health states in fatal cases and by subtraction from 10 years for those who survive			
Controlled phase of stomach cancer	Duration based on SEER data			
Metastatic phase of stomach cancer	Last month of life in fatal cases			
Terminal phase of stomach cancer	Last month of life in fatal cases			
Liver cancer			0.96	
Liver cancer due to hepatitis B	(1) custom model to generate incidence using incidence and mortality to incidence ratios from cancer registries and deaths estimated in CODEM; (2) prevalence estimated from survival data; (3) DisMod-MR 2.0 of proportion of liver cancer due to hepatitis B			0.73
Diagnosis and primary therapy phase of liver cancer due to hepatitis B	Duration based on literature review			
Controlled phase of liver cancer due to hepatitis B	Duration by subtraction of sum of durations of the other three health states in fatal cases and by subtraction from 10 years for those who survive			
Metastatic phase of liver cancer due to hepatitis B	Duration based on SEER data			
Terminal phase of liver cancer due to hepatitis B	Last month of life in fatal cases			
Liver cancer due to hepatitis C	(1) custom model to generate incidence using incidence and mortality to incidence ratios from cancer registries and deaths estimated in CODEM; (2) prevalence estimated from survival data; (3) DisMod-MR 2.0 of proportion of liver cancer due to hepatitis C			0.63
Diagnosis and primary therapy phase of liver cancer due to hepatitis C	Duration based on literature review			
Controlled phase of liver cancer due to hepatitis C	Duration by subtraction of sum of durations of the other three health states in fatal cases and by subtraction from 10 years for those who survive			
Metastatic phase of liver cancer due to hepatitis C	Duration based on SEER data			
Terminal phase of liver cancer due to hepatitis C	Last month of life in fatal cases			
Liver cancer due to alcohol use	(1) custom model to generate incidence using incidence and mortality to incidence ratios from cancer registries and deaths estimated in CODEM; (2) prevalence estimated from survival data; (3) DisMod-MR 2.0 of proportion of liver cancer due to alcohol			0.55
Diagnosis and primary therapy phase of liver cancer due to alcohol use	Duration based on literature review			

Appendix Table A.4: Model type and fit metrics: R-squared

Cause, sequelae, or intermediate model	Model description	R-squared (prevalence)	R-squared (incidence)	R-squared (proportion)
Controlled phase of liver cancer due to alcohol use	Duration by subtraction of sum of durations of the other three health states in fatal cases and by subtraction from 10 years for those who survive			
Metastatic phase of liver cancer due to alcohol use	Duration based on SEER data			
Terminal phase of liver cancer due to alcohol use	Last month of life in fatal cases			
Liver cancer due to other causes	(1) custom model to generate incidence using incidence and mortality to incidence ratios from cancer registries and deaths estimated in CODEM; (2) prevalence estimated from survival data; (3) DisMod-MR 2.0 of proportion of liver cancer due to other causes			0.73
Diagnosis and primary therapy phase of liver cancer due to other causes	Duration based on literature review			
Controlled phase of liver cancer due to other causes	Duration by subtraction of sum of durations of the other three health states in fatal cases and by subtraction from 10 years for those who survive			
Metastatic phase of liver cancer due to other causes	Duration based on SEER data			
Terminal phase of liver cancer due to other causes	Last month of life in fatal cases			
Larynx cancer	(1) custom model to generate incidence using incidence and mortality to incidence ratios from cancer registries and deaths estimated in CODEM; (2) prevalence estimated from survival data		0.97	0.80
Diagnosis and primary therapy phase of larynx cancer	Duration based on literature review			
Controlled phase of larynx cancer	Duration by subtraction of sum of durations of the other three health states in fatal cases and by subtraction from 10 years for those who survive			
Metastatic phase of larynx cancer	Duration based on SEER data			
Terminal phase of larynx cancer	Last month of life in fatal cases			
Laryngectomy due to larynx cancer	(1) DisMod-MR 2.0 of proportion of cases undergoing laryngectomy applied to incident cases; (2) DisMod-MR 2.0 to stream out prevalence in those who survive and average duration applied to those who do not survive		0.97	
Tracheal, bronchus and lung cancer	(1) custom model to generate incidence using incidence and mortality to incidence ratios from cancer registries and deaths estimated in CODEM; (2) prevalence estimated from survival data		0.98	
Diagnosis and primary therapy phase of lung, bronchus, and trachea cancer	Duration based on literature review			
Controlled phase of lung, bronchus, and trachea cancer	Duration by subtraction of sum of durations of the other three health states in fatal cases and by subtraction from 10 years for those who survive			
Metastatic phase of lung, bronchus, and trachea cancer	Duration based on SEER data			
Terminal phase of lung, bronchus, and trachea cancer	Last month of life in fatal cases			
Breast cancer	(1) custom model to generate incidence using incidence and mortality to incidence ratios from cancer registries and deaths estimated in CODEM; (2) prevalence estimated from survival data		0.99	0.96
Diagnosis and primary therapy phase of breast cancer	Duration based on literature review			
Controlled phase of breast cancer	Duration by subtraction of sum of durations of the other three health states in fatal cases and by subtraction from 10 years for those who survive			
Metastatic phase of breast cancer	Duration based on SEER data			
Terminal phase of breast cancer	Last month of life in fatal cases			
Mastectomy due to breast cancer	(1) DisMod-MR 2.0 of proportion of cases undergoing mastectomy applied to incident cases; (2) DisMod-MR 2.0 to stream out prevalence in those who survive and average duration applied to those who do not survive		0.99	
Cervical cancer	(1) custom model to generate incidence using incidence and mortality to incidence ratios from cancer registries and deaths estimated in CODEM; (2) prevalence estimated from survival data		0.94	
Diagnosis and primary therapy phase of cervical cancer	Duration based on literature review			
Controlled phase of cervical cancer	Duration by subtraction of sum of durations of the other three health states in fatal cases and by subtraction from 10 years for those who survive			
Metastatic phase of cervical cancer	Duration based on SEER data			
Terminal phase of cervical cancer	Last month of life in fatal cases			
Uterine cancer	(1) custom model to generate incidence using incidence and mortality to incidence ratios from cancer registries and deaths estimated in CODEM; (2) prevalence estimated from survival data		0.92	
Diagnosis and primary therapy phase of uterine cancer	Duration based on literature review			
Controlled phase of uterine cancer	Duration by subtraction of sum of durations of the other three health states in fatal cases and by subtraction from 10 years for those who survive			
Metastatic phase of uterine cancer	Duration based on SEER data			
Terminal phase of uterine cancer	Last month of life in fatal cases			
Prostate cancer	(1) custom model to generate incidence using incidence and mortality to incidence ratios from cancer registries and deaths estimated in CODEM; (2) prevalence estimated from survival data		0.99	0.97
Diagnosis and primary therapy phase of prostate cancer	Duration based on literature review			
Controlled phase of prostate cancer	Duration by subtraction of sum of durations of the other three health states in fatal cases and by subtraction from 10 years for those who survive			
Metastatic phase of prostate cancer	Duration based on SEER data			
Terminal phase of prostate cancer	Last month of life in fatal cases			
Impotence and incontinence due to prostate cancer	(1) DisMod-MR 2.0 of proportion of cases with impotence and/or incontinence applied to incident cases; (2) DisMod-MR 2.0 to stream out prevalence in those who survive and average duration applied to those who do not survive		0.99	
Impotence due to prostate cancer	Proportion from literature			
Incontinence due to prostate cancer	Proportion from literature			
Colon and rectum cancer	(1) custom model to generate incidence using incidence and mortality to incidence ratios from cancer registries and deaths estimated in CODEM; (2) prevalence estimated from survival data		0.96	0.87
Diagnosis and primary therapy phase of colon and rectum cancers	Duration based on literature review			
Controlled phase of colon and rectum cancers	Duration by subtraction of sum of durations of the other three health states in fatal cases and by subtraction from 10 years for those who survive			
Metastatic phase of colon and rectum cancers	Duration based on SEER data			
Terminal phase of colon and rectum cancers	Last month of life in fatal cases			
Stoma due to colon and rectum cancer	(1) DisMod-MR 2.0 of proportion of cases with stoma applied to incident cases; (2) DisMod-MR 2.0 to stream out prevalence in those who survive and average duration applied to those who do not survive			
Lip and oral cavity cancer	(1) custom model to generate incidence using incidence and mortality to incidence ratios from cancer registries and deaths estimated in CODEM; (2) prevalence estimated from survival data		0.91	
Diagnosis and primary therapy phase of mouth cancer	Duration based on literature review			
Controlled phase of mouth cancer	Duration by subtraction of sum of durations of the other three health states in fatal cases and by subtraction from 10 years for those who survive			
Metastatic phase of mouth cancer	Duration based on SEER data			
Terminal phase of mouth cancer	Last month of life in fatal cases			
Nasopharynx cancer	(1) custom model to generate incidence using incidence and mortality to incidence ratios from cancer registries and deaths estimated in CODEM; (2) prevalence estimated from survival data		0.93	
Diagnosis and primary therapy phase of nasopharynx cancer	Duration based on literature review			
Controlled phase of nasopharynx cancer	Duration by subtraction of sum of durations of the other three health states in fatal cases and by subtraction from 10 years for those who survive			
Metastatic phase of nasopharynx cancer	Duration based on SEER data			
Terminal phase of nasopharynx cancer	Last month of life in fatal cases			
Other pharynx cancer	(1) custom model to generate incidence using incidence and mortality to incidence ratios from cancer registries and deaths estimated in CODEM; (2) prevalence estimated from survival data		0.96	

Appendix Table A.4: Model type and fit metrics: R-squared				
Cause, sequelae, or intermediate model	Model description	R-squared (prevalence)	R-squared (incidence)	R-squared (proportion)
Diagnosis and primary therapy phase of other pharynx cancer	Duration based on literature review			
Controlled phase of other pharynx cancer	Duration by subtraction of sum of durations of the other three health states in fatal cases and by subtraction from 10 years for those who survive			
Metastatic phase of other pharynx cancer	Duration based on SEER data			
Terminal phase of other pharynx cancer	Last month of life in fatal cases			
Gallbladder and biliary tract cancer	(1) custom model to generate incidence using incidence and mortality to incidence ratios from cancer registries and deaths estimated in CODEM; (2) prevalence estimated from survival data		0.95	
Diagnosis and primary therapy phase of gallbladder and biliary tract cancer	Duration based on literature review			
Controlled phase of gallbladder and biliary tract cancer	Duration by subtraction of sum of durations of the other three health states in fatal cases and by subtraction from 10 years for those who survive			
Metastatic phase of gallbladder and biliary tract cancer	Duration based on SEER data			
Terminal phase of gallbladder and biliary tract cancer	Last month of life in fatal cases			
Pancreatic cancer	(1) custom model to generate incidence using incidence and mortality to incidence ratios from cancer registries and deaths estimated in CODEM; (2) prevalence estimated from survival data		0.97	
Diagnosis and primary therapy phase of pancreatic cancer	Duration based on literature review			
Controlled phase of pancreatic cancer	Duration by subtraction of sum of durations of the other three health states in fatal cases and by subtraction from 10 years for those who survive			
Metastatic phase of pancreatic cancer	Duration based on SEER data			
Terminal phase of pancreatic cancer	Last month of life in fatal cases			
Malignant skin melanoma	(1) custom model to generate incidence using incidence and mortality to incidence ratios from cancer registries and deaths estimated in CODEM; (2) prevalence estimated from survival data		0.96	
Diagnosis and primary therapy phase of malignant skin melanoma	Duration based on literature review			
Controlled phase of malignant skin melanoma	Duration by subtraction of sum of durations of the other three health states in fatal cases and by subtraction from 10 years for those who survive			
Metastatic phase of malignant skin melanoma	Duration based on SEER data			
Terminal phase of malignant skin melanoma	Last month of life in fatal cases			
Non-melanoma skin cancer	(1) custom model to generate incidence using incidence and mortality to incidence ratios from cancer registries and deaths estimated in CODEM; (2) prevalence estimated from survival data		0.90	
Cutaneous squamous cell carcinoma	Duration based on literature review			
Diagnosis and primary therapy phase of cutaneous squamous cell carcinoma	Duration based on literature review			
Control phase of cutaneous squamous cell carcinoma	Duration by subtraction of sum of durations of the other three health states in fatal cases and by subtraction from 10 years for those who survive			
Metastatic phase of cutaneous squamous cell carcinoma	Duration based on SEER data			
Terminal phase of cutaneous squamous cell carcinoma	Last month of life in fatal cases			
Basal cell carcinoma	(1) duration estimated to vary between 1 and 10 years using covariate of health system access to differentiate estimates by country and year; DisMod-MR 2.0 of incidence and remission (inverse of duration estimates from (1))		0.98	
Disfigurement due to basal cell carcinoma	Proportion from literature			
Ovarian cancer	(1) custom model to generate incidence using incidence and mortality to incidence ratios from cancer registries and deaths estimated in CODEM; (2) prevalence estimated from survival data		0.94	
Diagnosis and primary therapy phase of ovarian cancer	Duration based on literature review			
Controlled phase of ovarian cancer	Duration by subtraction of sum of durations of the other three health states in fatal cases and by subtraction from 10 years for those who survive			
Metastatic phase of ovarian cancer	Duration based on SEER data			
Terminal phase of ovarian cancer	Last month of life in fatal cases			
Testicular cancer	(1) custom model to generate incidence using incidence and mortality to incidence ratios from cancer registries and deaths estimated in CODEM; (2) prevalence estimated from survival data		0.95	
Diagnosis and primary therapy phase of testicular cancer	Duration based on literature review			
Controlled phase of testicular cancer	Duration by subtraction of sum of durations of the other three health states in fatal cases and by subtraction from 10 years for those who survive			
Metastatic phase of testicular cancer	Duration based on SEER data			
Terminal phase of testicular cancer	Last month of life in fatal cases			
Kidney cancer	(1) custom model to generate incidence using incidence and mortality to incidence ratios from cancer registries and deaths estimated in CODEM; (2) prevalence estimated from survival data		0.92	
Diagnosis and primary therapy phase of kidney cancer	Duration based on literature review			
Controlled phase of kidney cancer	Duration by subtraction of sum of durations of the other three health states in fatal cases and by subtraction from 10 years for those who survive			
Metastatic phase of kidney cancer	Duration based on SEER data			
Terminal phase of kidney cancer	Last month of life in fatal cases			
Bladder cancer	(1) custom model to generate incidence using incidence and mortality to incidence ratios from cancer registries and deaths estimated in CODEM; (2) prevalence estimated from survival data		0.96	
Diagnosis and primary therapy phase of bladder cancer	Duration based on literature review			
Controlled phase of bladder cancer	Duration by subtraction of sum of durations of the other three health states in fatal cases and by subtraction from 10 years for those who survive			
Metastatic phase of bladder cancer	Duration based on SEER data			
Terminal phase of bladder cancer	Last month of life in fatal cases			
Urinary incontinence due to bladder cancer	DisMod-MR 2.0 proportion with urinary incontinence applied to incident cases; (2) DisMod-MR 2.0 to stream out prevalence in those who survive and average duration applied to those who do not survive		0.92	
Brain and nervous system cancer	(1) custom model to generate incidence using incidence and mortality to incidence ratios from cancer registries and deaths estimated in CODEM; (2) prevalence estimated from survival data		0.93	
Diagnosis and primary therapy phase of brain and nervous system cancers	Duration based on literature review			
Controlled phase of brain and nervous system cancers	Duration by subtraction of sum of durations of the other three health states in fatal cases and by subtraction from 10 years for those who survive			
Metastatic phase of brain and nervous system cancers	Duration based on SEER data			
Terminal phase of brain and nervous system cancers	Last month of life in fatal cases			
Thyroid cancer	(1) custom model to generate incidence using incidence and mortality to incidence ratios from cancer registries and deaths estimated in CODEM; (2) prevalence estimated from survival data		0.88	
Diagnosis and primary therapy phase of thyroid cancer	Duration based on literature review			
Controlled phase of thyroid cancer	Duration by subtraction of sum of durations of the other three health states in fatal cases and by subtraction from 10 years for those who survive			
Metastatic phase of thyroid cancer	Duration based on SEER data			
Terminal phase of thyroid cancer	Last month of life in fatal cases			
Mesothelioma	(1) custom model to generate incidence using incidence and mortality to incidence ratios from cancer registries and deaths estimated in CODEM; (2) prevalence estimated from survival data		0.94	

Appendix Table A.4: Model type and fit metrics: R-squared				
Cause, sequelae, or intermediate model	Model description	R-squared (prevalence)	R-squared (incidence)	R-squared (proportion)
Diagnosis and primary therapy phase of mesothelioma	Duration based on literature review			
Controlled phase of mesothelioma	Duration by subtraction of sum of durations of the other three health states in fatal cases and by subtraction from 10 years for those who survive			
Metastatic phase of mesothelioma	Duration based on SEER data			
Terminal phase of mesothelioma	Last month of life in fatal cases			
Hodgkin lymphoma	(1) custom model to generate incidence using incidence and mortality to incidence ratios from cancer registries and deaths estimated in CODEM; (2) prevalence estimated from survival data		0.90	
Diagnosis and primary therapy phase of Hodgkin disease	Duration based on literature review			
Controlled phase of Hodgkin disease	Duration by subtraction of sum of durations of the other three health states in fatal cases and by subtraction from 10 years for those who survive			
Metastatic phase of Hodgkin disease	Duration based on SEER data			
Terminal phase of Hodgkin disease	Last month of life in fatal cases			
Non-Hodgkin lymphoma	(1) custom model to generate incidence using incidence and mortality to incidence ratios from cancer registries and deaths estimated in CODEM; (2) prevalence estimated from survival data		0.85	
Diagnosis and primary therapy phase of non-Hodgkin lymphoma	Duration based on literature review			
Controlled phase of non-Hodgkin lymphoma	Duration by subtraction of sum of durations of the other three health states in fatal cases and by subtraction from 10 years for those who survive			
Metastatic phase of non-Hodgkin lymphoma	Duration based on SEER data			
Terminal phase of non-Hodgkin lymphoma	Last month of life in fatal cases			
Multiple myeloma	(1) custom model to generate incidence using incidence and mortality to incidence ratios from cancer registries and deaths estimated in CODEM; (2) prevalence estimated from survival data		0.95	
Diagnosis and primary therapy phase of multiple myeloma	Duration based on literature review			
Controlled phase of multiple myeloma	Duration by subtraction of sum of durations of the other three health states in fatal cases and by subtraction from 10 years for those who survive			
Metastatic phase of multiple myeloma	Duration based on SEER data			
Terminal phase of multiple myeloma	Last month of life in fatal cases			
Leukemia	(1) custom model to generate incidence using incidence and mortality to incidence ratios from cancer registries and deaths estimated in CODEM; (2) prevalence estimated from survival data		0.93	
Diagnosis and primary therapy phase of leukemia	Duration based on literature review			
Controlled phase of leukemia	Duration by subtraction of sum of durations of the other three health states in fatal cases and by subtraction from 10 years for those who survive			
Metastatic phase of leukemia	Duration based on SEER data			
Terminal phase of leukemia	Last month of life in fatal cases			
Other neoplasms	(1) custom model to generate incidence using incidence and mortality to incidence ratios from cancer registries and deaths estimated in CODEM; (2) prevalence estimated from survival data		0.93	
Diagnosis and primary therapy phase of other neoplasms	Duration based on literature review			
Controlled phase of other neoplasms	Duration by subtraction of sum of durations of the other three health states in fatal cases and by subtraction from 10 years for those who survive			
Metastatic phase of other neoplasms	Duration based on SEER data			
Terminal phase of other neoplasms	Last month of life in fatal cases			
Cardiovascular diseases				
Rheumatic heart disease	DisMod-MR 2.0 of prevalence run separately for data from high and low income countries to better reflect differences in age pattern			
Rheumatic heart disease - Low income	DisMod-MR 2.0	0.56		
Rheumatic heart disease - High income	DisMod-MR 2.0	0.93		
Rheumatic heart disease, without heart failure	subtraction of heart failure cases from DisMod-MR 2.0 prevalence of all rheumatic heart disease			
Mild heart failure due to rheumatic heart disease	(1) DisMod-MR 2.0 of prevalence, incidence, no remission and excess mortality of all heart failure; (2) separate DisMod-MR 2.0 model for the proportion of all heart failure due to rheumatic heart disease; (3) MEPS analysis of severity distribution of all heart failure			
Moderate heart failure due to rheumatic heart disease	(1) DisMod-MR 2.0 of prevalence, incidence, no remission and excess mortality of all heart failure; (2) separate DisMod-MR 2.0 model for the proportion of all heart failure due to rheumatic heart disease; (3) MEPS analysis of severity distribution of all heart failure			
Severe heart failure due to rheumatic heart disease	(1) DisMod-MR 2.0 of prevalence, incidence, no remission and excess mortality of all heart failure; (2) separate DisMod-MR 2.0 model for the proportion of all heart failure due to rheumatic heart disease; (3) MEPS analysis of severity distribution of all heart failure			
Ischemic heart disease				
Myocardial infarction due to ischemic heart disease	(1) Proportional model of CODEM deaths from ischemic heart disease that are due to myocardial infarction; (2) DisMod-MR 2.0 of incidence, excess mortality and cause-specific mortality due to myocardial infarction and remission assumption to reflect 28 duration		0.95	
Asymptomatic ischemic heart disease following myocardial infarction	Empirical proportion			
Acute myocardial infarction first 2 days	application of higher disability weight for the first two days following myocardial infarction			
Acute myocardial infarction 3 to 28 days	application of lower disability weight days 3-28 following myocardial infarction			
Angina due to ischemic heart disease	DisMod-MR 2.0 of prevalence, incidence, excess mortality	0.62		
Asymptomatic angina due to ischemic heart disease	MEPS regression analysis	0.43		
Mild angina due to ischemic heart disease	MEPS regression analysis	0.43		
Moderate angina due to ischemic heart disease	MEPS regression analysis	0.43		
Severe angina due to ischemic heart disease	MEPS regression analysis	0.43		
Mild heart failure due to ischemic heart disease	(1) DisMod-MR 2.0 of prevalence, incidence, no remission and excess mortality of all heart failure; (2) separate DisMod-MR 2.0 model for the proportion of all heart failure due to ischemic heart disease; (3) MEPS analysis of severity distribution of all heart failure			
Moderate heart failure due to ischemic heart disease	(1) DisMod-MR 2.0 of prevalence, incidence, no remission and excess mortality of all heart failure; (2) separate DisMod-MR 2.0 model for the proportion of all heart failure due to ischemic heart disease; (3) MEPS analysis of severity distribution of all heart failure			
Severe heart failure due to ischemic heart disease	(1) DisMod-MR 2.0 of prevalence, incidence, no remission and excess mortality of all heart failure; (2) separate DisMod-MR 2.0 model for the proportion of all heart failure due to ischemic heart disease; (3) MEPS analysis of severity distribution of all heart failure			
MI to IHD ratio	intermediate model of ratio deaths coded to myocardial infarction to all deaths from ischemic heart disease			0.95
Cerebrovascular disease				
Cerebrovascular disease acute first ever	DisMod-MR 2.0		0.96	
Cerebrovascular disease acute	DisMod-MR 2.0		0.96	
Cerebrovascular disease chronic	DisMod-MR 2.0	0.79	0.99	
Ischemic stroke				
Asymptomatic chronic ischemic stroke	MEPS regression analysis	0.43		
Chronic ischemic stroke severity level 1	MEPS regression analysis	0.43		
Chronic ischemic stroke severity level 2	MEPS regression analysis	0.43		
Chronic ischemic stroke severity level 4	MEPS regression analysis	0.43		
Chronic ischemic stroke severity level 3	MEPS regression analysis	0.43		
Chronic ischemic stroke severity level 5	MEPS regression analysis	0.43		

Appendix Table A.4: Model type and fit metrics: R-squared				
Cause, sequelae, or intermediate model	Model description	R-squared (prevalence)	R-squared (incidence)	R-squared (proportion)
Acute ischemic stroke first ever	DisMod-MR 2.0		0.95	
Acute ischemic stroke	(1) split CODEM cause-specific mortality due to stroke into mortality from early and late stroke deaths based on estimated cause specific mortality from an early iteration of DisMod-MR 2.0 models of acute and chronic stroke; (2) DisMod-MR 2.0 of incidence of acute ischemic stroke, excess mortality and remission setting to reflect 28 day duration; (3) result from acute ischemic and hemorrhagic stroke DisMod models scaled to prevalence from another DisMod-MR 2.0 model of incidence of all stroke, excess mortality and cause-specific mortality due to acute stroke from (1)		0.95	
Acute ischemic stroke severity level 1	MEPS regression analysis	0.43		
Acute ischemic stroke severity level 2	MEPS regression analysis	0.43		
Acute ischemic stroke severity level 4	MEPS regression analysis	0.43		
Acute ischemic stroke severity level 3	MEPS regression analysis	0.43		
Acute ischemic stroke severity level 5	MEPS regression analysis	0.43		
Hemorrhagic stroke				
Asymptomatic chronic hemorrhagic stroke	MEPS regression analysis	0.43		
Chronic hemorrhagic stroke severity level 1	MEPS regression analysis	0.43		
Chronic hemorrhagic stroke severity level 2	MEPS regression analysis	0.43		
Chronic hemorrhagic stroke severity level 4	MEPS regression analysis	0.43		
Chronic hemorrhagic stroke severity level 3	MEPS regression analysis	0.43		
Chronic hemorrhagic stroke severity level 5	MEPS regression analysis	0.43		
Acute hemorrhagic stroke first ever	DisMod-MR 2.0		0.84	
Acute hemorrhagic stroke	(1) split CODEM cause-specific mortality due to stroke into mortality from early and late stroke deaths based on estimated cause specific mortality from an early iteration of DisMod-MR 2.0 models of acute and chronic stroke; (2) DisMod-MR 2.0 of incidence of acute hemorrhagic stroke, excess mortality and remission setting to reflect 28 day duration; (3) result from acute ischemic and hemorrhagic stroke DisMod models scaled to prevalence from another DisMod-MR 2.0 model of incidence of all stroke, excess mortality and cause-specific mortality due to acute stroke from (1)		0.85	
Acute hemorrhagic stroke severity level 1	MEPS regression analysis	0.43		
Acute hemorrhagic stroke severity level 2	MEPS regression analysis	0.43		
Acute hemorrhagic stroke severity level 4	MEPS regression analysis	0.43		
Acute hemorrhagic stroke severity level 3	MEPS regression analysis	0.43		
Acute hemorrhagic stroke severity level 5	MEPS regression analysis	0.43		
Hypertensive heart disease				0.52
Mild heart failure due to hypertensive heart disease	(1) DisMod-MR 2.0 of prevalence, incidence, no remission and excess mortality of all heart failure; (2) separate DisMod-MR 2.0 model for the proportion of all heart failure due to hypertensive heart disease; (3) MEPS analysis of severity distribution of all heart failure			
Moderate heart failure due to hypertensive heart disease	(1) DisMod-MR 2.0 of prevalence, incidence, no remission and excess mortality of all heart failure; (2) separate DisMod-MR 2.0 model for the proportion of all heart failure due to hypertensive heart disease; (3) MEPS analysis of severity distribution of all heart failure			
Severe heart failure due to hypertensive heart disease	(1) DisMod-MR 2.0 of prevalence, incidence, no remission and excess mortality of all heart failure; (2) separate DisMod-MR 2.0 model for the proportion of all heart failure due to hypertensive heart disease; (3) MEPS analysis of severity distribution of all heart failure			
Cardiomyopathy and myocarditis				
Acute myocarditis	DisMod-MR 2.0 of incidence only model and estimation of prevalence based on duration of 3 months		0.95	
Mild heart failure due to cardiomyopathy and myocarditis	(1) DisMod-MR 2.0 of prevalence, incidence, no remission and excess mortality of all heart failure; (2) separate DisMod-MR 2.0 model for the proportion of all heart failure due to cardiomyopathy; (3) MEPS analysis of severity distribution of all heart failure			
Moderate heart failure due to cardiomyopathy and myocarditis	(1) DisMod-MR 2.0 of prevalence, incidence, no remission and excess mortality of all heart failure; (2) separate DisMod-MR 2.0 model for the proportion of all heart failure due to cardiomyopathy; (3) MEPS analysis of severity distribution of all heart failure			
Severe heart failure due to cardiomyopathy and myocarditis	(1) DisMod-MR 2.0 of prevalence, incidence, no remission and excess mortality of all heart failure; (2) separate DisMod-MR 2.0 model for the proportion of all heart failure due to cardiomyopathy; (3) MEPS analysis of severity distribution of all heart failure			
Atrial fibrillation and flutter	DisMod-MR 2.0 of incidence, prevalence and excess mortality data and remission set to zero	0.67	0.78	
Asymptomatic atrial fibrillation and flutter	MEPS regression analysis	0.43		
Symptomatic atrial fibrillation and flutter	MEPS regression analysis	0.43		
Peripheral vascular disease	DisMod-MR 2.0 prevalence Ankle Brachial Index <0.9	0.79		
Proportion of peripheral vascular disease with intermittent claudication	DisMod-MR 2.0 of proportion Ankle Brachial Index <0.9 who report symptoms of claudication			0.50
Asymptomatic peripheral vascular disease	(1) DisMod-MR 2.0 all cases with Ankle Brachial Index <0.9; (2) DisMod-MR 2.0 proportion of people with ABI<.9 who report symptoms; (3) multiplication of results from step (1) by 1 minus results from step (2)			
Symptomatic claudication due to peripheral vascular disease	(1) DisMod-MR 2.0 all cases with Ankle Brachial Index <0.9; (2) DisMod-MR 2.0 proportion of people with ABI<.9 who report symptoms; (3) multiplication of results from step (1) by results from step (2)			
Endocarditis	DisMod-MR 2.0 incidence, excess mortality and remission		0.83	
Moderate endocarditis	Proportion from literature			
Severe endocarditis	Proportion from literature			
Mild heart failure due to endocarditis	(1) DisMod-MR 2.0 of prevalence, incidence, no remission and excess mortality of all heart failure; (2) separate DisMod-MR 2.0 model for the proportion of all heart failure due to endocarditis (3) MEPS analysis of severity distribution of all heart failure			
Moderate heart failure due to endocarditis	(1) DisMod-MR 2.0 of prevalence, incidence, no remission and excess mortality of all heart failure; (2) separate DisMod-MR 2.0 model for the proportion of all heart failure due to endocarditis (3) MEPS analysis of severity distribution of all heart failure			
Severe heart failure due to endocarditis	(1) DisMod-MR 2.0 of prevalence, incidence, no remission and excess mortality of all heart failure; (2) separate DisMod-MR 2.0 model for the proportion of all heart failure due to endocarditis (3) MEPS analysis of severity distribution of all heart failure			
Other cardiovascular and circulatory diseases				
Mild heart failure due to other cardiovascular diseases	(1) DisMod-MR 2.0 of prevalence, incidence, no remission and excess mortality of all heart failure; (2) separate DisMod-MR 2.0 model for the proportion of all heart failure due to other cardiovascular diseases (3) MEPS analysis of severity distribution of all heart failure			
Moderate heart failure due to other cardiovascular diseases	(1) DisMod-MR 2.0 of prevalence, incidence, no remission and excess mortality of all heart failure; (2) separate DisMod-MR 2.0 model for the proportion of all heart failure due to other cardiovascular diseases (3) MEPS analysis of severity distribution of all heart failure			
Severe heart failure due to other cardiovascular diseases	(1) DisMod-MR 2.0 of prevalence, incidence, no remission and excess mortality of all heart failure; (2) separate DisMod-MR 2.0 model for the proportion of all heart failure due to other cardiovascular diseases (3) MEPS analysis of severity distribution of all heart failure			
Asymptomatic other cardiovascular diseases	MEPS regression analysis	0.43		
Mild other cardiovascular diseases	MEPS regression analysis	0.43		
Moderate other cardiovascular diseases	MEPS regression analysis	0.43		
Severe other cardiovascular diseases	MEPS regression analysis	0.43		
Chronic respiratory diseases				
Chronic obstructive pulmonary disease	DisMod-MR 2.0 of prevalence, incidence, excess mortality and zero remission of all COPD cases	0.67		
Mild chronic obstructive pulmonary disease proportion	(1) DisMod-MR 2.0 of proportion by Gold class; map USA proportion to MEPS regression analysis severity; apply ratios to all other countries			0.67
Moderate chronic obstructive pulmonary disease proportion	DisMod-MR 2.0			0.32
Severe chronic obstructive pulmonary disease proportion	DisMod-MR 2.0			0.64

Appendix Table A.4: Model type and fit metrics: R-squared

Cause, sequelae, or intermediate model	Model description	R-squared (prevalence)	R-squared (incidence)	R-squared (proportion)
Severe interstitial lung disease and pulmonary sarcoidosis without heart failure	MEPS regression analysis	0.43		
Mild heart failure due to severe interstitial lung disease and pulmonary sarcoidosis	MEPS regression analysis severity of interstitial lung disease and for heart failure: (1) DisMod-MR 2.0 of prevalence, incidence, no remission and excess mortality of all heart failure; (2) separate DisMod-MR 2.0 model for the proportion of all heart failure due to other cardiovascular diseases (3) MEPS analysis of severity distribution of all heart failure			
Moderate heart failure due to severe interstitial lung disease and pulmonary sarcoidosis	MEPS regression analysis severity of interstitial lung disease and for heart failure: (1) DisMod-MR 2.0 of prevalence, incidence, no remission and excess mortality of all heart failure; (2) separate DisMod-MR 2.0 model for the proportion of all heart failure due to other cardiovascular diseases (3) MEPS analysis of severity distribution of all heart failure			
Severe heart failure due to severe interstitial lung disease and pulmonary sarcoidosis	MEPS regression analysis severity of interstitial lung disease and for heart failure: (1) DisMod-MR 2.0 of prevalence, incidence, no remission and excess mortality of all heart failure; (2) separate DisMod-MR 2.0 model for the proportion of all heart failure due to other cardiovascular diseases (3) MEPS analysis of severity distribution of all heart failure			
Other chronic respiratory diseases	YLD to YLL ratio for COPD, pneumoconiosis and interstitial lung disease applied to YLL from other chronic respiratory disease			
Cirrhosis	DisMod-MR 2.0 of prevalence, cause-specific mortality rates and excess mortality rates (for countries with prevalence data derived from an earlier iteration of DisMod-MR 2.0 model)	0.90		
Cirrhosis due to hepatitis B	DisMod-MR 2.0 proportion cirrhosis due to hepatitis B			0.91
Cirrhosis due to hepatitis C	DisMod-MR 2.0 proportion cirrhosis due to hepatitis C			0.75
Cirrhosis due to alcohol use	DisMod-MR 2.0 proportion cirrhosis due to alcohol			0.87
Cirrhosis due to other causes	DisMod-MR 2.0 proportion cirrhosis due to other causes			
Cirrhosis of the liver due to other cause	DisMod-MR 2.0			0.32
Digestive diseases				
Peptic ulcer disease				
Peptic ulcer disease, symptomatic episodes	DisMod-MR 2.0 of incidence and prevalence and remission setting to reflect 2 week duration		0.37	
Mild anemia due to peptic ulcer disease	calculation of overall anemia prevalence for each cause using aetiology-specific prevalence from DisMod-MR 2.0 model and aetiology-specific meta-analysis of anemia severity			
Moderate anemia due to peptic ulcer disease	calculation of overall anemia prevalence for each cause using aetiology-specific prevalence from DisMod-MR 2.0 model and aetiology-specific meta-analysis of anemia severity			
Severe anemia due to peptic ulcer disease	calculation of overall anemia prevalence for each cause using aetiology-specific prevalence from DisMod-MR 2.0 model and aetiology-specific meta-analysis of anemia severity			
Gastritis and duodenitis				
Gastritis and duodenitis, symptomatic episodes	DisMod-MR 2.0 of incidence and prevalence and remission setting to reflect 1 week duration		0.55	
Mild anemia due to gastritis and duodenitis	calculation of overall anemia prevalence for each cause using aetiology-specific prevalence from DisMod-MR 2.0 model and aetiology-specific meta-analysis of anemia severity			
Moderate anemia due to gastritis and duodenitis	calculation of overall anemia prevalence for each cause using aetiology-specific prevalence from DisMod-MR 2.0 model and aetiology-specific meta-analysis of anemia severity			
Severe anemia due to gastritis and duodenitis	calculation of overall anemia prevalence for each cause using aetiology-specific prevalence from DisMod-MR 2.0 model and aetiology-specific meta-analysis of anemia severity			
Appendicitis	DisMod-MR 2.0 of incidence and remission setting to reflect 2 week duration		0.94	
Paralytic ileus and intestinal obstruction	DisMod-MR 2.0 of incidence and remission setting to reflect 2 week duration		0.96	
Inguinal, femoral, and abdominal hernia	(1) regression model to estimate waiting time for surgery based on health system access; (2) DisMod-MR 2.0 of incidence and remission from step (1)		0.36	
Inflammatory bowel disease				
Ulcerative colitis	(1) DisMod-MR 2.0 of incidence, prevalence and excess mortality data and zero remission setting; (2) adjustment of prevalence for (small) fraction of cases of 'undetermined colitis'	0.51	0.52	
Crohn's disease	(1) DisMod-MR 2.0 of incidence, prevalence and excess mortality data and zero remission setting; (2) adjustment of prevalence for (small) fraction of cases of 'undetermined colitis'	0.91	0.57	
Vascular intestinal disorders	DisMod-MR 2.0 of incidence and remission setting to reflect 6 week duration		0.93	
Gallbladder and biliary diseases	DisMod-MR 2.0 of incidence and remission setting to reflect 2-6 week duration	0.44	0.94	
Pancreatitis	DisMod-MR 2.0 of incidence and remission setting to reflect 6 week duration	0.86	0.87	
Other digestive diseases	YLD to YLL ratio for stated digestive diseases applied to YLL from other digestive diseases			
Neurological disorders				
Alzheimer disease and other dementias	DisMod-MR 2.0 of incidence, prevalence and excess mortality data and zero remission	0.82	0.72	
Mild Alzheimer disease and other dementias	Meta-analysis			
Moderate Alzheimer disease and other dementias	Meta-analysis			
Severe Alzheimer disease and other dementias	Meta-analysis			
Parkinson disease	DisMod-MR 2.0 of incidence, prevalence and excess mortality data and zero remission	0.76		
Mild Parkinson disease	Meta-analysis			
Moderate Parkinson disease	Meta-analysis			
Severe Parkinson disease	Meta-analysis			
Epilepsy	(1) DisMod-MR 2.0 of 'envelope' of epilepsy based on incidence, prevalence, excess mortality and remission data; (2) mixed effects models of (a) the proportion idiopathic vs secondary epilepsy, (b) the proportion with severe epilepsy (i.e. one or more seizures per month), (c) the proportion treated and (d) the proportion seizure-free (i.e. no seizure in last year) while on treatment	0.40	0.34	
Seizure-free, treated epilepsy	epilepsy envelope x % idiopathic x (1 - % severe) x % treated x % seizure-free on treatment			
Less severe epilepsy	epilepsy envelope x % idiopathic x (1 - % severe) x (1 - % treated x % seizure-free on treatment)			
Severe epilepsy	epilepsy envelope x % idiopathic x % severe			
Multiple sclerosis	DisMod-MR 2.0 of incidence, prevalence and excess mortality data and zero remission	0.76	0.38	
Mild multiple sclerosis	Meta-analysis			
Moderate multiple sclerosis	Meta-analysis			
Severe multiple sclerosis	Meta-analysis			
Migraine	DisMod-MR 2.0 of prevalence only	0.68		
Asymptomatic migraine	Meta-analysis duration and frequency of episodes			
Symptomatic migraine	Meta-analysis duration and frequency of episodes			
Tension-type headache	DisMod-MR 2.0 of prevalence only	0.78		
Asymptomatic tension-type headache	Meta-analysis duration and frequency of episodes			
Symptomatic tension-type headache	Meta-analysis duration and frequency of episodes			
Medication overuse headache	DisMod-MR 2.0	0.77		
Asymptomatic medication overuse headache	Proportion from literature			
Symptomatic medication overuse headache	Proportion from literature			
Other neurological disorders				
Other neurological disorders	YLD to YLL ratio for dementia, Parkinson's and multiple sclerosis applied to YLL from other neurological disorders			
Guillain-Barré syndrome due to other neurological disorders	DisMod-MR 2.0 of incidence and remission data all GBS + meta-analysis of proportion of all cases not attributed to an underlying infectious disease			
Mental and substance use disorders				
Schizophrenia	DisMod-MR 2.0 of prevalence, incidence, remission and excess mortality	0.89	0.69	
Schizophrenia residual state	Meta-analysis			
Schizophrenia acute state	Meta-analysis			
Alcohol use disorders				
Alcohol dependence cases	DisMod-MR 2.0 of prevalence, incidence, remission and excess mortality	0.69		
Asymptomatic alcohol dependence	MEPS, NESARC, and NSMHWB regression analysis	0.43		

Appendix Table A.4: Model type and fit metrics: R-squared

Cause, sequelae, or intermediate model	Model description	R-squared (prevalence)	R-squared (incidence)	R-squared (proportion)
Very mild alcohol dependence	MEPS, NESARC, and NSMHWB regression analysis	0.43		
Mild alcohol dependence	MEPS, NESARC, and NSMHWB regression analysis	0.43		
Moderate alcohol dependence	MEPS, NESARC, and NSMHWB regression analysis	0.43		
Severe alcohol dependence	MEPS, NESARC, and NSMHWB regression analysis	0.43		
Fetal alcohol syndrome cases	DisMod-MR 2.0 of prevalence, excess mortality and zero remission	0.51		
Asymptomatic fetal alcohol syndrome	Meta-analysis of IQ loss in fetal alcohol syndrome assuming mild FAS corresponds with IQ 70-84; moderate FAS with IQ50-69 and severe FAS with IQ<50 based on the descriptions of intellectual disability in the lay descriptions for FAS that were used in the disability surveys			
Mild fetal alcohol syndrome	Meta-analysis of IQ loss in fetal alcohol syndrome assuming mild FAS corresponds with IQ 70-84; moderate FAS with IQ50-69 and severe FAS with IQ<50 based on the descriptions of intellectual disability in the lay descriptions for FAS that were used in the disability surveys			
Moderate fetal alcohol syndrome	Meta-analysis of IQ loss in fetal alcohol syndrome assuming mild FAS corresponds with IQ 70-84; moderate FAS with IQ50-69 and severe FAS with IQ<50 based on the descriptions of intellectual disability in the lay descriptions for FAS that were used in the disability surveys			
Severe fetal alcohol syndrome	Meta-analysis of IQ loss in fetal alcohol syndrome assuming mild FAS corresponds with IQ 70-84; moderate FAS with IQ50-69 and severe FAS with IQ<50 based on the descriptions of intellectual disability in the lay descriptions for FAS that were used in the disability surveys			
Drug use disorders				
Opioid use disorders	DisMod-MR 2.0 of prevalence, excess mortality and remission data	0.82		
Asymptomatic opioid dependence	NESARC % asymptomatic applied to subset of cases identifiable through surveys (from DisMod-MR 2.0 coefficient for survey data vs 'indirect' or estimates triangulated between needle exchange, treatment and judiciary data sources)			
Mild opioid dependence	(1) NESARC % asymptomatic applied to subset of cases identifiable through surveys (from DisMod-MR 2.0 coefficient for survey data vs 'indirect' or estimates triangulated between needle exchange, treatment and judiciary data sources); (2) proportion mild and severe from analysis of Australian cohort			
Severe opioid dependence	(1) NESARC % asymptomatic applied to subset of cases identifiable through surveys (from DisMod-MR 2.0 coefficient for survey data vs 'indirect' or estimates triangulated between needle exchange, treatment and judiciary data sources); (2) proportion mild and severe from analysis of Australian cohort			
Cocaine use disorders	DisMod-MR 2.0 of prevalence, excess mortality and remission data	0.66		
Asymptomatic cocaine dependence	NESARC % asymptomatic			
Mild cocaine dependence	(1) NESARC % asymptomatic; (2) proportion mild and severe from analysis of Australian cohort			
Severe cocaine dependence	(1) NESARC % asymptomatic; (2) proportion mild and severe from analysis of Australian cohort			
Amphetamine use disorders	DisMod-MR 2.0 of prevalence, excess mortality and remission data	0.58		
Asymptomatic amphetamine dependence	NESARC % asymptomatic			
Mild amphetamine dependence	(1) NESARC % asymptomatic; (2) proportion mild and severe from analysis of Australian cohort			
Severe amphetamine dependence	(1) NESARC % asymptomatic; (2) proportion mild and severe from analysis of Australian cohort			
Cannabis use disorders	DisMod-MR 2.0 of prevalence, excess mortality and remission data	0.70		
Asymptomatic cannabis dependence	NESARC			
Mild cannabis dependence	NESARC			
Severe cannabis dependence	NESARC			
Other drug use disorders	prevalence ratio other drugs to cocaine and amphetamine dependence from NESARC applied to YLD from those two drugs by country/year/age/sex			
Depressive disorders				
Major depressive disorder	DisMod-MR 2.0 of prevalence only	0.60		
Major depressive disorder, currently without symptoms	MEPS, NESARC, and NSMHWB regression analysis	0.43		
Mild major depressive disorder	MEPS, NESARC, and NSMHWB regression analysis	0.43		
Moderate major depressive disorder	MEPS, NESARC, and NSMHWB regression analysis	0.43		
Severe major depressive disorder	MEPS, NESARC, and NSMHWB regression analysis	0.43		
Dysthymia	DisMod-MR 2.0 of prevalence only	0.53		
Dysthymia, currently without symptoms	MEPS, NESARC, and NSMHWB regression analysis	0.43		
Symptomatic dysthymia	MEPS, NESARC, and NSMHWB regression analysis	0.43		
Bipolar disorder	DisMod-MR 2.0 of prevalence, excess mortality and remission data	0.39		
Bipolar disorder residual state	Meta-analysis			
Bipolar disorder depressive state	Meta-analysis			
Bipolar disorder manic state	Meta-analysis			
Anxiety disorders	DisMod-MR 2.0 of prevalence and remission data and assumption of zero excess mortality	0.71		
Anxiety disorders, currently without symptoms	MEPS, NESARC, and NSMHWB regression analysis	0.43		
Mild anxiety disorders	MEPS, NESARC, and NSMHWB regression analysis	0.43		
Moderate anxiety disorders	MEPS, NESARC, and NSMHWB regression analysis	0.43		
Severe anxiety disorders	MEPS, NESARC, and NSMHWB regression analysis	0.43		
Eating disorders				
Anorexia nervosa	DisMod-MR 2.0 of incidence, prevalence, excess mortality and remission data			
Bulimia nervosa	DisMod-MR 2.0 of incidence, prevalence and remission data and assumption of zero excess mortality	0.83		
Autistic spectrum disorders				
Autism	DisMod-MR 2.0 of incidence, prevalence, excess mortality and remission data	0.43	0.40	
Asperger syndrome	DisMod-MR 2.0 of incidence and prevalence and remission data assuming zero excess mortality	0.55	0.78	
Attention-deficit/hyperactivity disorder	DisMod-MR 2.0 of incidence, prevalence and remission data and assumption of zero excess mortality	0.09		
Attention-deficit/hyperactivity disorder, currently without symptoms	Proportion from literature			
Symptomatic attention-deficit/hyperactivity disorder	Proportion from literature			
Conduct disorder	DisMod-MR 2.0 of incidence, prevalence and remission data and assumption of zero excess mortality	0.53	0.11	
Conduct disorder, currently without symptoms	Proportion from literature			
Symptomatic conduct disorder	Proportion from literature			
Idiopathic intellectual disability				
Borderline idiopathic intellectual disability	(1) DisMod-MR 2.0 of all intellectual disability with IQ <70; (2) meta-analysis of ratio of prevalence IQ70-84 to IQ<70; (3) subtraction of all stated causes of borderline intellectual disability from envelope to get idiopathic borderline intellectual disability			
Mild idiopathic intellectual disability	(1) DisMod-MR 2.0 of all intellectual disability with IQ <70; (2) meta-analysis of ratio of prevalence IQ50-69 to IQ<70; (3) subtraction of all stated causes of mild intellectual disability from envelope to get idiopathic mild intellectual disability			
Moderate idiopathic intellectual disability	(1) DisMod-MR 2.0 of all intellectual disability with IQ <70; (2) meta-analysis of ratio of prevalence IQ50-69 to IQ<70; (3) subtraction of all stated causes of moderate intellectual disability from envelope to get idiopathic moderate intellectual disability			
Severe idiopathic intellectual disability	(1) DisMod-MR 2.0 of all intellectual disability with IQ <70; (2) meta-analysis of ratio of prevalence IQ50-69 to IQ<70; (3) subtraction of all stated causes of severe intellectual disability from envelope to get idiopathic severe intellectual disability			
Profound idiopathic intellectual disability	(1) DisMod-MR 2.0 of all intellectual disability with IQ <70; (2) meta-analysis of ratio of prevalence IQ50-69 to IQ<70; (3) subtraction of all stated causes of profound intellectual disability from envelope to get idiopathic profound intellectual disability			
Other mental and substance use disorders	Prevalence of personality disorders in NESARC and NSMHWB in individuals who do not have a diagnosis of any of the stated mental or substance use disorders			

Appendix Table A.4: Model type and fit metrics: R-squared

Cause, sequelae, or intermediate model	Model description	R-squared (prevalence)	R-squared (incidence)	R-squared (proportion)
Other mental disorders, currently without symptoms	NESARC and NSMHWB regression analysis			
Mild other mental disorders	NESARC and NSMHWB regression analysis			
Moderate other mental disorders	NESARC and NSMHWB regression analysis			
Severe other mental disorders	NESARC and NSMHWB regression analysis			
Diabetes, urogenital, blood, and endocrine diseases				
Diabetes mellitus	(1) calculated crosswalks for non-reference case definitions in NHANES; (2) DisMod-MR 2.0 of crosswalked incidence and prevalence, and excess mortality assuming no remission	0.81	0.72	
Uncomplicated diabetes mellitus	residual of DisMod-MR 2.0 proportions with complications			
Diabetic neuropathy	DisMod-MR 2.0 proportion model			0.71
Diabetic foot due to neuropathy	DisMod-MR 2.0 proportion model			0.64
Diabetic neuropathy and amputation with treatment	Proportion from literature			
Diabetic neuropathy and amputation without treatment	Proportion from literature			
Moderate vision impairment due to diabetes mellitus	(1) DisMod-MR 2.0 of prevalence of vision loss (not blindness) due to diabetes; (2) split into moderate and severe based on vision loss envelope			
Severe vision impairment due to diabetes mellitus	(1) DisMod-MR 2.0 of prevalence of vision loss (not blindness) due to diabetes; (2) split into moderate and severe based on vision loss envelope			
Blindness due to diabetes mellitus	(1) DisMod-MR 2.0 of prevalence of blindness due to diabetes			
Amputation due to diabetes mellitus proportion	DisMod-MR 2.0 proportion model	0.87	0.36	
Vision impairment due to diabetes mellitus	DisMod-MR 2.0 of prevalence of vision loss (not blindness) due to diabetes	0.86		
Acute glomerulonephritis			0.17	
Chronic kidney disease				
Stage III chronic kidney disease	DisMod-MR 2.0	0.72		
Stage IV chronic kidney disease	DisMod-MR 2.0	0.67		
End-stage renal disease after transplant	DisMod-MR 2.0	0.43		
End-stage renal disease on dialysis	DisMod-MR 2.0	0.93	0.82	
Stage V chronic kidney disease untreated	DisMod-MR 2.0	0.73		
Chronic kidney disease due to diabetes mellitus				0.89
Stage III chronic kidney disease without anemia due to diabetes mellitus	(1) DisMod-MR 2.0 of prevalence of stage III chronic kidney disease only; (2) DisMod-MR 2.0 of proportion that is due to diabetes; subtraction of health states combined with anemia			
Stage III chronic kidney disease and mild anemia due to diabetes mellitus	(1) DisMod-MR 2.0 of prevalence of stage III chronic kidney disease only; (2) DisMod-MR 2.0 of proportion that is due to diabetes; for anemia: (1) Mixed-effects regression to predict mean hemoglobin; (2) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (3) calculation of overall anemia prevalence for each cause using aetiology-specific prevalence from DisMod-MR 2.0 model and aetiology-specific meta-analysis of anemia severity; (4) Bayesian contingency table modeling of severity distribution for each cause			
Stage III chronic kidney disease and moderate anemia due to diabetes mellitus	(1) DisMod-MR 2.0 of prevalence of stage III chronic kidney disease only; (2) DisMod-MR 2.0 of proportion that is due to diabetes; for anemia: (1) Mixed-effects regression to predict mean hemoglobin; (2) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (3) calculation of overall anemia prevalence for each cause using aetiology-specific prevalence from DisMod-MR 2.0 model and aetiology-specific meta-analysis of anemia severity; (4) Bayesian contingency table modeling of severity distribution for each cause			
Stage III chronic kidney disease and severe anemia due to diabetes mellitus	(1) DisMod-MR 2.0 of prevalence of stage III chronic kidney disease only; (2) DisMod-MR 2.0 of proportion that is due to diabetes; for anemia: (1) Mixed-effects regression to predict mean hemoglobin; (2) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (3) calculation of overall anemia prevalence for each cause using aetiology-specific prevalence from DisMod-MR 2.0 model and aetiology-specific meta-analysis of anemia severity; (4) Bayesian contingency table modeling of severity distribution for each cause			
Stage IV chronic kidney disease without anemia due to diabetes mellitus	(1) DisMod-MR 2.0 of prevalence of stage IV chronic kidney disease only; (2) DisMod-MR 2.0 of proportion that is due to diabetes; subtraction of health states combined with anemia			
Stage IV chronic kidney disease and mild anemia due to diabetes mellitus	(1) DisMod-MR 2.0 of prevalence of stage IV chronic kidney disease only; (2) DisMod-MR 2.0 of proportion that is due to diabetes; for anemia: (1) Mixed-effects regression to predict mean hemoglobin; (2) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (3) calculation of overall anemia prevalence for each cause using aetiology-specific prevalence from DisMod-MR 2.0 model and aetiology-specific meta-analysis of anemia severity; (4) Bayesian contingency table modeling of severity distribution for each cause			
Stage IV chronic kidney disease and moderate anemia due to diabetes mellitus	(1) DisMod-MR 2.0 of prevalence of stage IV chronic kidney disease only; (2) DisMod-MR 2.0 of proportion that is due to diabetes; for anemia: (1) Mixed-effects regression to predict mean hemoglobin; (2) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (3) calculation of overall anemia prevalence for each cause using aetiology-specific prevalence from DisMod-MR 2.0 model and aetiology-specific meta-analysis of anemia severity; (4) Bayesian contingency table modeling of severity distribution for each cause			
Stage IV chronic kidney disease and severe anemia due to diabetes mellitus	(1) DisMod-MR 2.0 of prevalence of stage IV chronic kidney disease only; (2) DisMod-MR 2.0 of proportion that is due to diabetes; for anemia: (1) Mixed-effects regression to predict mean hemoglobin; (2) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (3) calculation of overall anemia prevalence for each cause using aetiology-specific prevalence from DisMod-MR 2.0 model and aetiology-specific meta-analysis of anemia severity; (4) Bayesian contingency table modeling of severity distribution for each cause			
Stage V chronic kidney disease untreated due to diabetes mellitus	(1) DisMod-MR 2.0 of prevalence only; (2) DisMod-MR 2.0 proportion due to diabetes			
End-stage renal disease after transplant due to diabetes mellitus	(1) DisMod-MR 2.0 of prevalence, incidence, excess mortality and remission; (2) DisMod-MR 2.0 proportion due to diabetes			
End-stage renal disease on dialysis due to diabetes mellitus	(1) DisMod-MR 2.0 of prevalence, incidence, excess mortality and remission; (2) DisMod-MR 2.0 proportion due to diabetes			
Chronic kidney disease due to hypertension				0.45
Stage III chronic kidney disease without anemia due to hypertension	(1) DisMod-MR 2.0 of prevalence of stage III chronic kidney disease only; (2) DisMod-MR 2.0 of proportion that is due to hypertension; subtraction of health states combined with anemia			
Stage III chronic kidney disease and mild anemia due to hypertension	(1) DisMod-MR 2.0 of prevalence of stage III chronic kidney disease only; (2) DisMod-MR 2.0 of proportion that is due to hypertension; for anemia: (1) Mixed-effects regression to predict mean hemoglobin; (2) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (3) calculation of overall anemia prevalence for each cause using aetiology-specific prevalence from DisMod-MR 2.0 model and aetiology-specific meta-analysis of anemia severity; (4) Bayesian contingency table modeling of severity distribution for each cause			
Stage III chronic kidney disease and moderate anemia due to hypertension	(1) DisMod-MR 2.0 of prevalence of stage III chronic kidney disease only; (2) DisMod-MR 2.0 of proportion that is due to hypertension; for anemia: (1) Mixed-effects regression to predict mean hemoglobin; (2) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (3) calculation of overall anemia prevalence for each cause using aetiology-specific prevalence from DisMod-MR 2.0 model and aetiology-specific meta-analysis of anemia severity; (4) Bayesian contingency table modeling of severity distribution for each cause			
Stage III chronic kidney disease and severe anemia due to hypertension	(1) DisMod-MR 2.0 of prevalence of stage III chronic kidney disease only; (2) DisMod-MR 2.0 of proportion that is due to hypertension; for anemia: (1) Mixed-effects regression to predict mean hemoglobin; (2) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (3) calculation of overall anemia prevalence for each cause using aetiology-specific prevalence from DisMod-MR 2.0 model and aetiology-specific meta-analysis of anemia severity; (4) Bayesian contingency table modeling of severity distribution for each cause			
Stage IV chronic kidney disease without anemia due to hypertension	(1) DisMod-MR 2.0 of prevalence of stage IV chronic kidney disease only; (2) DisMod-MR 2.0 of proportion that is due to hypertension; subtraction of health states combined with anemia			

Appendix Table A.4: Model type and fit metrics: R-squared

Cause, sequelae, or intermediate model	Model description	R-squared (prevalence)	R-squared (incidence)	R-squared (proportion)
Stage IV chronic kidney disease and severe anemia due to other causes	(1) DisMod-MR 2.0 of prevalence of stage IV chronic kidney disease only; (2) DisMod-MR 2.0 of proportion that is due to other causes; for anemia: (1) Mixed-effects regression to predict mean hemoglobin; (2) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (3) calculation of overall anemia prevalence for each cause using aetiology-specific prevalence from DisMod-MR 2.0 model and aetiology-specific meta-analysis of anemia severity; (4) Bayesian contingency table modeling of severity distribution for each cause			
Stage V chronic kidney disease untreated due to other causes	(1) DisMod-MR 2.0 of prevalence, incidence, excess mortality and remission; (2) DisMod-MR 2.0 proportion due to other causes			
End-stage renal disease after transplant due to other causes	(1) DisMod-MR 2.0 of prevalence only; (2) DisMod-MR 2.0 proportion due to other causes			
End-stage renal disease on dialysis due to other causes	(1) DisMod-MR 2.0 of prevalence, incidence, excess mortality and remission; (2) DisMod-MR 2.0 proportion due to other causes			
Urinary diseases and male infertility				
Interstitial nephritis and urinary tract infections	DisMod-MR 2.0 of incidence data and remission setting consistent with one week duration		0.80	
Mild interstitial nephritis and urinary tract infections	MEPS regression analysis	0.43		
Moderate interstitial nephritis and urinary tract infections	MEPS regression analysis	0.43		
Urolithiasis				
Acute urolithiasis	DisMod-MR 2.0 of incidence data and remission setting consistent with two week duration		0.93	
Chronic urolithiasis	DisMod-MR 2.0 of incidence and prevalence data assuming zero remission and cap on excess mortality of 0.01	0.88	0.82	
Benign prostatic hyperplasia	DisMod-MR 2.0 of incidence and prevalence data assuming range of remission from 0 to 0.1 and no excess mortality	0.94	0.10	
Asymptomatic benign prostatic hyperplasia	MEPS regression analysis	0.43		
Symptomatic benign prostatic hyperplasia	MEPS regression analysis	0.43		
Male infertility due to other causes				
Primary male infertility	(1) DisMod-MR 2.0 prevalence among 'exposed' couples (i.e. with child wish but no live birth and no contraceptives used in last five years); (2) DisMod-MR 2.0 of proportion 'exposed' out of total population; (3) DisMod-MR 2.0 proportion of primary infertility in men; (4) subtraction of infertility due to Klinefelter			
Secondary male infertility	(1) DisMod-MR 2.0 prevalence among 'exposed' couples (i.e. with child wish and no contraceptives used in five years since last live birth); (2) DisMod-MR 2.0 of proportion 'exposed' out of total population; (3) DisMod-MR 2.0 proportion of secondary infertility in men			
Other urinary diseases	YLD to YLL ratio of urinary tract infections and urolithiasis applied to YLL from other urinary diseases			
Gynecological diseases				
Uterine fibroids	DisMod-MR 2.0	0.17	0.71	
Asymptomatic uterine fibroids	MEPS regression analysis	0.43		
Mild abdominal pain due to uterine fibroids, without anemia	MEPS regression analysis of symptomatic cases	0.43		
Mild abdominal pain due to uterine fibroids, with mild anemia	(1) MEPS regression analysis of symptomatic cases (2) Mixed-effects regression to predict mean hemoglobin; (3) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (4) age- and sex-specific redistribution to determine aetiology-specific overall anemia prevalence; (5) Bayesian contingency table modeling of severity distribution for each cause			
Mild abdominal pain due to uterine fibroids, with moderate anemia	(1) MEPS regression analysis of symptomatic cases (2) Mixed-effects regression to predict mean hemoglobin; (3) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (4) age- and sex-specific redistribution to determine aetiology-specific overall anemia prevalence; (5) Bayesian contingency table modeling of severity distribution for each cause			
Mild abdominal pain due to uterine fibroids, with severe anemia	(1) MEPS regression analysis of symptomatic cases (2) Mixed-effects regression to predict mean hemoglobin; (3) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (4) age- and sex-specific redistribution to determine aetiology-specific overall anemia prevalence; (5) Bayesian contingency table modeling of severity distribution for each cause			
Polycystic ovarian syndrome	DisMod-MR 2.0	0.48		
Asymptomatic polycystic ovarian syndrome	Proportion from literature			
Hirsutism due to polycystic ovarian syndrome	Proportion from literature			
Hirsutism and primary infertility due to polycystic ovarian syndrome	Proportion with androgenic features and infertility from literature; proportion primary and secondary infertility from envelope of infertility after subtraction of causes that only cause primary (Turner) or secondary (maternal sepsis) infertility			
Primary infertility due to polycystic ovarian syndrome	Proportion infertility from literature; proportion primary and secondary infertility from envelope of infertility after subtraction of causes that only cause primary (Turner) or secondary (maternal sepsis) infertility			
Hirsutism and secondary infertility due to polycystic ovarian syndrome	Proportion with androgenic features and infertility from literature; proportion primary and secondary infertility from envelope of infertility after subtraction of causes that only cause primary (Turner) or secondary (maternal sepsis) infertility			
Secondary infertility due to polycystic ovarian syndrome	Proportion infertility from literature; proportion primary and secondary infertility from envelope of infertility after subtraction of causes that only cause primary (Turner) or secondary (maternal sepsis) infertility			
Female infertility due to other causes				
Idiopathic primary female infertility	(1) DisMod-MR 2.0 prevalence among 'exposed' couples (i.e. with child wish but no live birth and no contraceptives used in last five years); (2) DisMod-MR 2.0 of proportion 'exposed' out of total population; (3) DisMod-MR 2.0 proportion of primary infertility in women; (4) subtraction of primary infertility due to Turner syndrome, endometriosis, polycystic ovarian syndrome, and sexually transmitted diseases			
Idiopathic secondary female infertility	(1) DisMod-MR 2.0 prevalence among 'exposed' couples (i.e. with child wish and no contraceptives used in five years since last live birth); (2) DisMod-MR 2.0 of proportion 'exposed' out of total population; (3) DisMod-MR 2.0 proportion of secondary infertility in women; (4) subtraction of primary infertility due to Turner syndrome, endometriosis, polycystic ovarian syndrome, maternal sepsis and sexually transmitted diseases			
Endometriosis	DisMod-MR 2.0		0.18	
Asymptomatic endometriosis	Proportion from literature			
Mild abdominal pain due to endometriosis	Proportion from literature			
Moderate abdominal pain due to endometriosis	Proportion from literature			
Severe endometriosis	Proportion from literature			
Primary infertility due to endometriosis	Proportion infertility from literature; proportion primary and secondary infertility from envelope of infertility after subtraction of causes that only cause primary (Turner) or secondary (maternal sepsis) infertility			
Mild abdominal pain and primary infertility due to endometriosis	Proportion with abdominal pain and infertility from literature; proportion primary and secondary infertility from envelope of infertility after subtraction of causes that only cause primary (Turner) or secondary (maternal sepsis) infertility			
Moderate abdominal pain and primary infertility due to endometriosis	Proportion with abdominal pain and infertility from literature; proportion primary and secondary infertility from envelope of infertility after subtraction of causes that only cause primary (Turner) or secondary (maternal sepsis) infertility			
Severe abdominal pain and primary infertility due to endometriosis	Proportion with abdominal pain and infertility from literature; proportion primary and secondary infertility from envelope of infertility after subtraction of causes that only cause primary (Turner) or secondary (maternal sepsis) infertility			
Secondary infertility due to endometriosis	Proportion with abdominal pain and infertility from literature; proportion primary and secondary infertility from envelope of infertility after subtraction of causes that only cause primary (Turner) or secondary (maternal sepsis) infertility			
Mild abdominal pain and secondary infertility due to endometriosis	Proportion with abdominal pain and infertility from literature; proportion primary and secondary infertility from envelope of infertility after subtraction of causes that only cause primary (Turner) or secondary (maternal sepsis) infertility			
Moderate abdominal pain and secondary infertility due to endometriosis	Proportion with abdominal pain and infertility from literature; proportion primary and secondary infertility from envelope of infertility after subtraction of causes that only cause primary (Turner) or secondary (maternal sepsis) infertility			
Severe abdominal pain and secondary infertility due to endometriosis	Proportion with abdominal pain and infertility from literature; proportion primary and secondary infertility from envelope of infertility after subtraction of causes that only cause primary (Turner) or secondary (maternal sepsis) infertility			

Appendix Table A.4: Model type and fit metrics: R-squared				
Cause, sequelae, or intermediate model	Model description	R-squared (prevalence)	R-squared (incidence)	R-squared (proportion)
Genital prolapse	DisMod-MR 2.0	0.68		
Asymptomatic genital prolapse	Proportion from literature			
Abdominal pain due to genital prolapse	Proportion from literature			
Stress incontinence due to genital prolapse	Proportion from literature			
Abdominal pain and stress incontinence due to genital prolapse	Proportion from literature			
Premenstrual syndrome	DisMod-MR 2.0 proportion model	0.38		
Asymptomatic premenstrual syndrome	Proportion from literature			
Abdominal pain and depression due to premenstrual syndrome	Proportion from literature			
Abdominal pain due to premenstrual syndrome	Proportion from literature			
Depression due to premenstrual syndrome	Proportion from literature			
Other gynecological diseases	DisMod-MR 2.0 of prevalence from hospital admission data of other gynaecological disorders that do not lead to anemia	0.78		
Asymptomatic other gynecological disorders	MEPS regression analysis	0.43		
Mild other gynecological disorders	MEPS regression analysis	0.43		
Moderate other gynecological disorders	MEPS regression analysis	0.43		
Severe other gynecological disorders	MEPS regression analysis	0.43		
Mild anemia due to other gynecological diseases	(1) Mixed-effects regression to predict mean hemoglobin; (2) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (3) age- and sex-specific redistribution to determine aetiology-specific overall anemia prevalence; (4) Bayesian contingency table modeling of severity distribution for each cause			
Moderate anemia due to other gynecological diseases	(1) Mixed-effects regression to predict mean hemoglobin; (2) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (3) age- and sex-specific redistribution to determine aetiology-specific overall anemia prevalence; (4) Bayesian contingency table modeling of severity distribution for each cause			
Severe anemia due to other gynecological diseases	(1) Mixed-effects regression to predict mean hemoglobin; (2) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (3) age- and sex-specific redistribution to determine aetiology-specific overall anemia prevalence; (4) Bayesian contingency table modeling of severity distribution for each cause			
Hemoglobinopathies and hemolytic anemias				
Thalassemias				
Other combined sequelae of beta-thalassemia major	intermediate DisMod-MR 2.0 of birth prevalence and excess mortality assuming no remission	0.91		
Beta-thalassemia major, with mild anemia	(1) mixed-effects regression to predict mean hemoglobin; (2) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (3) calculation of overall anemia prevalence for each cause using aetiology-specific prevalence from DisMod-MR 2.0 model and aetiology-specific meta-analysis of anemia severity; (4) Bayesian contingency table modeling of severity distribution for each cause			
Beta-thalassemia major, with moderate anemia	(1) mixed-effects regression to predict mean hemoglobin; (2) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (3) calculation of overall anemia prevalence for each cause using aetiology-specific prevalence from DisMod-MR 2.0 model and aetiology-specific meta-analysis of anemia severity; (4) Bayesian contingency table modeling of severity distribution for each cause			
Beta-thalassemia major, with severe anemia	(1) mixed-effects regression to predict mean hemoglobin; (2) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (3) calculation of overall anemia prevalence for each cause using aetiology-specific prevalence from DisMod-MR 2.0 model and aetiology-specific meta-analysis of anemia severity; (4) Bayesian contingency table modeling of severity distribution for each cause			
Beta-thalassemia major, severe infection with severe anemia	(1) Meta-analysis of cases of severe infection (2) mixed-effects regression to predict mean hemoglobin; (3) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (4) calculation of overall anemia prevalence for each cause using aetiology-specific prevalence from DisMod-MR 2.0 model and aetiology-specific meta-analysis of anemia severity; (5) Bayesian contingency table modeling of severity distribution for each cause			
Other combined sequelae of hemoglobin E/beta-thalassemia	intermediate DisMod-MR 2.0 of birth prevalence and excess mortality assuming no remission	0.93		
Hemoglobin E/beta-thalassemia, with mild anemia	(1) mixed-effects regression to predict mean hemoglobin; (2) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (3) calculation of overall anemia prevalence for each cause using aetiology-specific prevalence from DisMod-MR 2.0 model and aetiology-specific meta-analysis of anemia severity; (4) Bayesian contingency table modeling of severity distribution for each cause			
Hemoglobin E/beta-thalassemia, with moderate anemia	(1) mixed-effects regression to predict mean hemoglobin; (2) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (3) calculation of overall anemia prevalence for each cause using aetiology-specific prevalence from DisMod-MR 2.0 model and aetiology-specific meta-analysis of anemia severity; (4) Bayesian contingency table modeling of severity distribution for each cause			
Hemoglobin E/beta-thalassemia, with severe anemia	(1) mixed-effects regression to predict mean hemoglobin; (2) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (3) calculation of overall anemia prevalence for each cause using aetiology-specific prevalence from DisMod-MR 2.0 model and aetiology-specific meta-analysis of anemia severity; (4) Bayesian contingency table modeling of severity distribution for each cause			
Hemoglobin E/beta-thalassemia, severe infection with severe anemia	(1) Meta-analysis of cases of severe infection (2) mixed-effects regression to predict mean hemoglobin; (3) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (4) calculation of overall anemia prevalence for each cause using aetiology-specific prevalence from DisMod-MR 2.0 model and aetiology-specific meta-analysis of anemia severity; (5) Bayesian contingency table modeling of severity distribution for each cause			
Other combined sequelae of hemoglobin H disease	intermediate DisMod-MR 2.0 of birth prevalence and excess mortality assuming no remission	0.24		
Hemoglobin H disease, with mild anemia	(1) mixed-effects regression to predict mean hemoglobin; (2) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (3) calculation of overall anemia prevalence for each cause using aetiology-specific prevalence from DisMod-MR 2.0 model and aetiology-specific meta-analysis of anemia severity; (4) Bayesian contingency table modeling of severity distribution for each cause			
Hemoglobin H disease, with moderate anemia	(1) mixed-effects regression to predict mean hemoglobin; (2) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (3) calculation of overall anemia prevalence for each cause using aetiology-specific prevalence from DisMod-MR 2.0 model and aetiology-specific meta-analysis of anemia severity; (4) Bayesian contingency table modeling of severity distribution for each cause			
Hemoglobin H disease, with severe anemia	(1) mixed-effects regression to predict mean hemoglobin; (2) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (3) calculation of overall anemia prevalence for each cause using aetiology-specific prevalence from DisMod-MR 2.0 model and aetiology-specific meta-analysis of anemia severity; (4) Bayesian contingency table modeling of severity distribution for each cause			
Hemoglobin H disease, severe infection with severe anemia	(1) Meta-analysis of cases of severe infection (2) mixed-effects regression to predict mean hemoglobin; (3) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (4) calculation of overall anemia prevalence for each cause using aetiology-specific prevalence from DisMod-MR 2.0 model and aetiology-specific meta-analysis of anemia severity; (5) Bayesian contingency table modeling of severity distribution for each cause			
Mild heart failure due to thalassemias	(1) DisMod-MR 2.0 of prevalence, incidence, no remission and excess mortality of all heart failure; (2) separate DisMod-MR 2.0 model for the proportion of all heart failure due to other cardiovascular diseases (3) MEPS analysis of severity distribution of all heart failure			
Moderate heart failure due to thalassemias	(1) DisMod-MR 2.0 of prevalence, incidence, no remission and excess mortality of all heart failure; (2) separate DisMod-MR 2.0 model for the proportion of all heart failure due to other cardiovascular diseases (3) MEPS analysis of severity distribution of all heart failure			
Severe heart failure due to thalassemias	(1) DisMod-MR 2.0 of prevalence, incidence, no remission and excess mortality of all heart failure; (2) separate DisMod-MR 2.0 model for the proportion of all heart failure due to other cardiovascular diseases (3) MEPS analysis of severity distribution of all heart failure			
Hemoglobin H disease, without anemia	subtraction of hemoglobin H disease with anemia sequelae from DisMod-MR 2.0 parent model of hemoglobin H disease			
Beta-thalassemia major, without anemia	subtraction of beta-thalassaemia major with anemia sequelae from DisMod-MR 2.0 parent model of beta-thalassaemia major			
Hemoglobin E/beta-thalassemia, without anemia	subtraction of hemoglobin E/beta-thalassemia with anemia sequelae from DisMod-MR 2.0 parent model of hemoglobin E/beta-thalassemia			
Thalassemia trait				

Appendix Table A.4: Model type and fit metrics: R-squared

Cause, sequelae, or intermediate model	Model description	R-squared (prevalence)	R-squared (incidence)	R-squared (proportion)
Severe anemia due to endocrine, metabolic, blood, and immune disorders	(1) mixed-effects regression to predict mean hemoglobin; (2) weibull fit based on mean hemoglobin and subsequent calculation of mild, moderate and severe anemia prevalence based on 2011 WHO classification; (3) calculation of overall anemia prevalence for each cause using aetiology-specific prevalence from DisMod-MR 2.0 model and aetiology-specific meta-analysis of anemia severity; (4) Bayesian contingency table modeling of severity distribution for each cause			
Mild heart failure due to endocrine, metabolic, blood, and immune disorders	(1) DisMod-MR 2.0 of prevalence, incidence, no remission and excess mortality of all heart failure; (2) separate DisMod-MR 2.0 model for the proportion of all heart failure due to other cardiovascular diseases (3) MEPS analysis of severity distribution of all heart failure			
Moderate heart failure due to endocrine, metabolic, blood, and immune disorders	(1) DisMod-MR 2.0 of prevalence, incidence, no remission and excess mortality of all heart failure; (2) separate DisMod-MR 2.0 model for the proportion of all heart failure due to other cardiovascular diseases (3) MEPS analysis of severity distribution of all heart failure			
Severe heart failure due to endocrine, metabolic, blood, and immune disorders	(1) DisMod-MR 2.0 of prevalence, incidence, no remission and excess mortality of all heart failure; (2) separate DisMod-MR 2.0 model for the proportion of all heart failure due to other cardiovascular diseases (3) MEPS analysis of severity distribution of all heart failure			
Musculoskeletal disorders				
Rheumatoid arthritis	DisMod-MR 2.0 of incidence, prevalence, excess mortality and remission data	0.69	0.30	
Mild rheumatoid arthritis	Meta-analysis			
Moderate rheumatoid arthritis	Meta-analysis			
Severe rheumatoid arthritis	Meta-analysis			
Osteoarthritis				
Osteoarthritis of the hip	DisMod-MR 2.0 of incidence, prevalence, excess mortality and remission data	0.75	0.61	
Mild osteoarthritis of the hip	Meta-analysis			
Moderate osteoarthritis of the hip	Meta-analysis			
Severe osteoarthritis of the hip	Meta-analysis			
Osteoarthritis of the knee	DisMod-MR 2.0 of incidence, prevalence, excess mortality and remission data	0.49	0.11	
Mild osteoarthritis of the knee	Meta-analysis			
Moderate osteoarthritis of the knee	Meta-analysis			
Severe osteoarthritis of the knee	Meta-analysis			
Low back and neck pain				
Low back pain	DisMod-MR 2.0 model of prevalence only	0.60		
Mild low back pain without leg pain	MEPS regression analysis	0.43		
Mild low back pain with leg pain	MEPS regression analysis	0.43		
Moderate low back pain without leg pain	MEPS regression analysis	0.43		
Moderate low back pain with leg pain	MEPS regression analysis	0.43		
Severe low back pain without leg pain	MEPS regression analysis	0.43		
Severe low back pain with leg pain	MEPS regression analysis	0.43		
Most severe low back pain without leg pain	MEPS regression analysis	0.43		
Most severe low back pain with leg pain	MEPS regression analysis	0.43		
Neck pain	DisMod-MR 2.0 model of prevalence only	0.69		
Mild neck pain	MEPS regression analysis	0.43		
Moderate neck pain	MEPS regression analysis	0.43		
Severe neck pain	MEPS regression analysis	0.43		
Most severe neck pain	MEPS regression analysis	0.43		
Gout	DisMod-MR 2.0 of incidence, prevalence, excess mortality and remission data	0.71		
Asymptomatic gout	Meta-analysis			
Symptomatic episodes of gout	DisMod-MR 2.0			
Polyarticular gout	Meta-analysis			
Other musculoskeletal disorders	DisMod-MR 2.0 of prevalence only	0.87		
Asymptomatic other musculoskeletal disorders	MEPS regression analysis	0.43		
Other musculoskeletal disorders severity level 2	MEPS regression analysis	0.43		
Other musculoskeletal disorders severity level 3	MEPS regression analysis	0.43		
Other musculoskeletal disorders severity level 5	MEPS regression analysis	0.43		
Other musculoskeletal disorders severity level 6	MEPS regression analysis	0.43		
Other musculoskeletal disorders severity level 1	MEPS regression analysis	0.43		
Other musculoskeletal disorders severity level 4	MEPS regression analysis	0.43		
Other non-communicable diseases				
Congenital anomalies				
Neural tube defects				
Moderate motor impairment due to moderate neural tube defects	(1) SMR from literature; (2) estimation of excess mortality by age, sex, country year from SMR and all-cause mortality rates; (3) DisMod-MR 2.0 of birth prevalence and excess mortality assuming no remission	0.61		
Severe neural tube defects	(1) SMR from literature; (2) estimation of excess mortality by age, sex, country year from SMR and all-cause mortality rates; (3) DisMod-MR 2.0 of birth prevalence and excess mortality assuming no remission	0.61		
Severe motor impairment due to severe neural tube defects	Meta-analysis			
Severe motor plus cognitive impairments due to severe neural tube defects	Meta-analysis			
Severe motor impairment with incontinence due to severe neural tube defects	Meta-analysis			
Congenital heart anomalies				
Less severe congenital heart anomalies	(1) SMR from literature; (2) estimation of excess mortality by age, sex, country year from SMR and all-cause mortality rates; (3) DisMod-MR 2.0 of birth prevalence and excess mortality assuming no remission	0.42		
Asymptomatic less severe congenital heart anomalies	(1) SMR from literature; (2) estimation of excess mortality by age, sex, country year from SMR and all-cause mortality rates; (3) DisMod-MR 2.0 of birth prevalence and excess mortality assuming no remission			
Symptomatic less severe congenital heart anomalies	(1) SMR from literature; (2) estimation of excess mortality by age, sex, country year from SMR and all-cause mortality rates; (3) DisMod-MR 2.0 of birth prevalence and excess mortality assuming no remission			
Severe congenital heart anomalies	(1) SMR from literature; (2) estimation of excess mortality by age, sex, country year from SMR and all-cause mortality rates; (3) DisMod-MR 2.0 of birth prevalence and excess mortality assuming no remission	0.31		
Critical congenital heart anomalies	(1) SMR from literature; (2) estimation of excess mortality by age, sex, country year from SMR and all-cause mortality rates; (3) DisMod-MR 2.0 of birth prevalence and excess mortality assuming no remission	0.28		
Mild heart failure due to congenital heart anomalies	(1) DisMod-MR 2.0 of prevalence, incidence, no remission and excess mortality of all heart failure; (2) separate DisMod-MR 2.0 model for the proportion of all heart failure due to congenital heart disease; (3) MEPS analysis of severity distribution of all heart failure			
Moderate heart failure due to congenital heart anomalies	(1) DisMod-MR 2.0 of prevalence, incidence, no remission and excess mortality of all heart failure; (2) separate DisMod-MR 2.0 model for the proportion of all heart failure due to congenital heart disease; (3) MEPS analysis of severity distribution of all heart failure			
Severe heart failure due to congenital heart anomalies	(1) DisMod-MR 2.0 of prevalence, incidence, no remission and excess mortality of all heart failure; (2) separate DisMod-MR 2.0 model for the proportion of all heart failure due to congenital heart disease; (3) MEPS analysis of severity distribution of all heart failure			
Orofacial clefts	DisMod-MR 2.0			
Asymptomatic orofacial clefts	Proportion from literature			
Disfigurement level 1 due to orofacial clefts	Proportion from literature			

Appendix Table A.4: Model type and fit metrics: R-squared

Cause, sequelae, or intermediate model	Model description	R-squared (prevalence)	R-squared (incidence)	R-squared (proportion)
Disfigurement level 2 due to orofacial clefts	Proportion from literature			
Disfigurement level 2 and speech problems due to orofacial clefts	Proportion from literature			
Down syndrome	(1) meta-analysis of SMR data for Down syndrome; (2) estimation of excess mortality by age, sex, country year from pooled SMR value and all-cause mortality rates; (3) DisMod-MR 2.0 of birth prevalence and excess mortality assuming no remission	0.48		
Asymptomatic Down syndrome	Proportion from literature			
Intellectual disability due to Down syndrome	Proportion from literature			
Intellectual disability with congenital heart disease due to Down syndrome	Proportion from literature			
Intellectual disability with dementia due to Down syndrome	Proportion from literature			
Intellectual disability with congenital heart disease and dementia due to Down syndrome	Proportion from literature			
Isolated congenital heart disease due to Down syndrome	Proportion from literature			
Turner syndrome	(1) SMR from literature; (2) estimation of excess mortality by age, sex, country year from SMR and all-cause mortality rates; (3) DisMod-MR 2.0 of birth prevalence and excess mortality assuming no remission	0.24		
Asymptomatic Turner syndrome	Proportion from literature			
Congenital heart disease due to Turner syndrome	Proportion from literature			
Primary infertility due to Turner syndrome	Proportion from literature			
Congenital heart disease with infertility due to Turner syndrome	Proportion from literature			
Klinefelter syndrome	(1) SMR from literature; (2) estimation of excess mortality by age, sex, country year from SMR and all-cause mortality rates; (3) DisMod-MR 2.0 of birth prevalence and excess mortality assuming no remission	0.21		
Asymptomatic Klinefelter syndrome	Proportion from literature			
Borderline intellectual disability due to Klinefelter syndrome	Proportion from literature			
Borderline intellectual disability with infertility due to Klinefelter syndrome	Proportion from literature			
Mild intellectual disability due to Klinefelter syndrome	Proportion from literature			
Mild intellectual disability with infertility due to Klinefelter syndrome	Proportion from literature			
Primary infertility due to Klinefelter syndrome	Proportion from literature			
Chromosomal unbalanced rearrangements	(1) meta-analysis of SMR data for Down syndrome; (2) estimation of excess mortality by age, sex, country year from pooled SMR value and all-cause mortality rates; (3) DisMod-MR 2.0 of birth prevalence and excess mortality assuming no remission	0.63		
Asymptomatic chromosomal unbalanced rearrangements	assumed same distribution of sequelae as for Down syndrome			
Intellectual disability due to chromosomal unbalanced rearrangements	assumed same distribution of sequelae as for Down syndrome			
Intellectual disability with congenital heart disease due to chromosomal unbalanced rearrangements	assumed same distribution of sequelae as for Down syndrome			
Intellectual disability with dementia due to chromosomal unbalanced rearrangements	assumed same distribution of sequelae as for Down syndrome			
Intellectual disability with congenital heart disease and dementia due to chromosomal unbalanced rearrangements	assumed same distribution of sequelae as for Down syndrome			
Isolated congenital heart disease due to chromosomal unbalanced rearrangements	assumed same distribution of sequelae as for Down syndrome			
Other congenital anomalies				
Hearing loss due to other congenital anomalies	DisMod-MR 2.0	0.45		
Mild hearing loss due to other congenital anomalies	(1) DisMod-MR 2.0 model of hearing loss by severity from all causes; (2) assumption that birth prevalence reflects prevalence of congenital hearing loss that remains constant with age as there is no excess mortality			
Mild hearing loss with ringing due to other congenital anomalies	(1) DisMod-MR 2.0 model of hearing loss by severity from all causes; (2) assumption that birth prevalence reflects prevalence of congenital hearing loss that remains constant with age as there is no excess mortality			
Moderate hearing loss due to other congenital anomalies	(1) DisMod-MR 2.0 model of hearing loss by severity from all causes; (2) assumption that birth prevalence reflects prevalence of congenital hearing loss that remains constant with age as there is no excess mortality			
Moderate hearing loss with ringing due to other congenital anomalies	(1) DisMod-MR 2.0 model of hearing loss by severity from all causes; (2) assumption that birth prevalence reflects prevalence of congenital hearing loss that remains constant with age as there is no excess mortality			
Moderately severe hearing loss due to other congenital anomalies	(1) DisMod-MR 2.0 model of hearing loss by severity from all causes; (2) assumption that birth prevalence reflects prevalence of congenital hearing loss that remains constant with age as there is no excess mortality			
Moderately severe hearing loss with ringing due to other congenital anomalies	(1) DisMod-MR 2.0 model of hearing loss by severity from all causes; (2) assumption that birth prevalence reflects prevalence of congenital hearing loss that remains constant with age as there is no excess mortality			
Severe hearing loss due to other congenital anomalies	(1) DisMod-MR 2.0 model of hearing loss by severity from all causes; (2) assumption that birth prevalence reflects prevalence of congenital hearing loss that remains constant with age as there is no excess mortality			
Severe hearing loss with ringing due to other congenital anomalies	(1) DisMod-MR 2.0 model of hearing loss by severity from all causes; (2) assumption that birth prevalence reflects prevalence of congenital hearing loss that remains constant with age as there is no excess mortality			
Profound hearing loss due to other congenital anomalies	(1) DisMod-MR 2.0 model of hearing loss by severity from all causes; (2) assumption that birth prevalence reflects prevalence of congenital hearing loss that remains constant with age as there is no excess mortality			
Profound hearing loss with ringing due to other congenital anomalies	(1) DisMod-MR 2.0 model of hearing loss by severity from all causes; (2) assumption that birth prevalence reflects prevalence of congenital hearing loss that remains constant with age as there is no excess mortality			
Complete hearing loss due to other congenital anomalies	(1) DisMod-MR 2.0 model of hearing loss by severity from all causes; (2) assumption that birth prevalence reflects prevalence of congenital hearing loss that remains constant with age as there is no excess mortality			
Complete hearing loss with ringing due to other congenital anomalies	(1) DisMod-MR 2.0 model of hearing loss by severity from all causes; (2) assumption that birth prevalence reflects prevalence of congenital hearing loss that remains constant with age as there is no excess mortality			
Other congenital anomalies	YLD to YLL ratio for congenital heart disease and neural tube defects applied to YLL for other congenital anomalies			
Skin and subcutaneous diseases				
Dermatitis				
Mild eczema	MEPS regression analysis	0.43		
Moderate eczema	MEPS regression analysis	0.43		
Severe eczema	MEPS regression analysis	0.43		
Asymptomatic contact dermatitis	MEPS regression analysis	0.43		
Mild contact dermatitis	MEPS regression analysis	0.43		
Severe contact dermatitis	MEPS regression analysis	0.43		
Asymptomatic seborrheic dermatitis	MEPS regression analysis	0.43		
Symptomatic seborrheic dermatitis	MEPS regression analysis	0.43		
Eczema	DisMod-MR 2.0 of prevalence, no excess mortality and remission bounded between 0 and 0.2	0.52		
Contact dermatitis	DisMod-MR 2.0 of prevalence only			
Seborrheic dermatitis	DisMod-MR 2.0 of prevalence only	0.81		
Psoriasis	DisMod-MR 2.0 of incidence and prevalence; setting on remission to range between 0.05 and 0.15	0.83	0.88	
Mild psoriasis	MEPS regression analysis	0.43		
Moderate psoriasis	MEPS regression analysis	0.43		
Severe psoriasis	MEPS regression analysis	0.43		
Cellulitis	DisMod-MR 2.0 of incidence and setting on remission consistent with a range of 10 day to 4 week duration		0.73	

Appendix Table A.4: Model type and fit metrics: R-squared				
Cause, sequelae, or intermediate model	Model description	R-squared (prevalence)	R-squared (incidence)	R-squared (proportion)
Mild cellulitis	MEPS regression analysis	0.43		
Severe cellulitis	MEPS regression analysis	0.43		
Pyoderma				
Impetigo	DisMod-MR 2.0 of incidence and setting on remission consistent with a range of 2 to 4 week duration		0.69	
Abscess and other bacterial skin diseases	DisMod-MR 2.0 of incidence and setting on remission consistent with a range of 1 to 3 week duration		0.62	
Scabies		0.70	0.50	
Fungal skin diseases				
Tinea capitis	DisMod-MR 2.0 of prevalence only	0.67		
Other fungal skin diseases	DisMod-MR 2.0 of prevalence only	0.59		
Viral skin diseases				
Mild molluscum contagiosum	MEPS regression analysis	0.43		
Severe molluscum contagiosum	MEPS regression analysis	0.43		
Viral warts	DisMod-MR 2.0 of incidence and prevalence and setting on remission consistent with a range of 6 months to 4 year duration	0.63		
Mild viral warts	MEPS regression analysis	0.43		
Severe viral warts	MEPS regression analysis	0.43		
Molluscum contagiosum	DisMod-MR 2.0 of incidence and prevalence and setting on remission consistent with a range of 6 months to 1 year duration		0.58	
Acne vulgaris		0.90		
Alopecia areata	DisMod-MR 2.0 of prevalence only	0.17		
Mild alopecia areata	MEPS regression analysis	0.43		
Severe alopecia areata	MEPS regression analysis	0.43		
Pruritus				
Urticaria	DisMod-MR 2.0 of prevalence only	0.75		
Mild urticaria	MEPS regression analysis	0.43		
Severe urticaria	MEPS regression analysis	0.43		
Decubitus ulcer	DisMod-MR 2.0 of incidence and prevalence and setting on remission consistent with a range of 2 months to 2 year duration		0.95	
Mild decubitus ulcer	MEPS regression analysis	0.43		
Moderate decubitus ulcer	MEPS regression analysis	0.43		
Severe decubitus ulcer	MEPS regression analysis	0.43		
Other skin and subcutaneous diseases	DisMod-MR 2.0 model of prevalence only from MEPS			
Asymptomatic other skin and subcutaneous diseases	MEPS regression analysis	0.43		
Symptomatic other skin and subcutaneous diseases	MEPS regression analysis	0.43		
Sense organ diseases				
Glaucoma				
Vision impairment due to glaucoma	DisMod-MR 2.0 of prevalence of vision loss (not blindness) due to glaucoma	0.75		
Moderate vision impairment due to glaucoma	(1) DisMod-MR 2.0 of prevalence of vision loss (not blindness) due to glaucoma (2) split into moderate and severe based on vision loss envelope			
Severe vision impairment due to glaucoma	(1) DisMod-MR 2.0 of prevalence of vision loss (not blindness) due to glaucoma (2) split into moderate and severe based on vision loss envelope			
Blindness due to glaucoma	DisMod-MR 2.0 of prevalence of blindness due to glaucoma	0.91		
Cataract				
Vision impairment due to cataract	DisMod-MR 2.0 of prevalence of vision loss (not blindness) due to cataract	0.86		
Moderate vision impairment due to cataract	(1) DisMod-MR 2.0 of prevalence of vision loss (not blindness) due to cataract (2) split into moderate and severe based on vision loss envelope			
Severe vision impairment due to cataract	(1) DisMod-MR 2.0 of prevalence of vision loss (not blindness) due to cataract (2) split into moderate and severe based on vision loss envelope			
Blindness due to cataract	DisMod-MR 2.0 of prevalence of blindness due to cataract			
Macular degeneration				
Vision impairment due to macular degeneration	DisMod-MR 2.0 of prevalence of vision loss (not blindness) due to macular degeneration	0.61		
Moderate vision impairment due to macular degeneration	(1) DisMod-MR 2.0 of prevalence of vision loss (not blindness) due to macular degeneration (2) split into moderate and severe based on vision loss envelope			
Severe vision impairment due to macular degeneration	(1) DisMod-MR 2.0 of prevalence of vision loss (not blindness) due to macular degeneration (2) split into moderate and severe based on vision loss envelope			
Blindness due to macular degeneration	DisMod-MR 2.0 of prevalence of blindness due to macular degeneration	0.99		
Uncorrected refractive error				
Moderate vision impairment due to uncorrected refractive error	Mixed effects regression of vision loss data by age, separately for level of severity, from studies that presented both 'best corrected' and 'presenting' vision. Difference between presenting and best corrected vision loss reflect uncorrected refractive error			
Severe vision impairment due to uncorrected refractive error	Mixed effects regression of vision loss data by age, separately for level of severity, from studies that presented both 'best corrected' and 'presenting' vision. Difference between presenting and best corrected vision loss reflect uncorrected refractive error			
Blindness due to uncorrected refractive error	Mixed effects regression of vision loss data by age, separately for level of severity, from studies that presented both 'best corrected' and 'presenting' vision. Difference between presenting and best corrected vision loss reflect uncorrected refractive error			
Near vision impairment due to presbyopia due to uncorrected refractive error	DisMod-MR 2.0 of prevalence presbyopia in people who do not have long-distance vision loss			
Age-related and other hearing loss		0.32		
Mild hearing loss due to age-related and other hearing loss	(1) DisMod-MR 2.0 of prevalence of all age-related and other hearing loss ; (2) severity split based on hearing loss envelope			
Mild hearing loss with ringing due to age-related and other hearing loss	(1) DisMod-MR 2.0 of prevalence of all age-related and other hearing loss ; (2) severity split based on hearing loss envelope			
Moderate hearing loss due to age-related and other hearing loss	(1) DisMod-MR 2.0 of prevalence of all age-related and other hearing loss ; (2) severity split based on hearing loss envelope			
Moderate hearing loss with ringing due to age-related and other hearing loss	(1) DisMod-MR 2.0 of prevalence of all age-related and other hearing loss ; (2) severity split based on hearing loss envelope			
Moderately severe hearing loss due to age-related and other hearing loss	(1) DisMod-MR 2.0 of prevalence of all age-related and other hearing loss ; (2) severity split based on hearing loss envelope			
Moderately severe hearing loss with ringing due to age-related and other hearing loss	(1) DisMod-MR 2.0 of prevalence of all age-related and other hearing loss ; (2) severity split based on hearing loss envelope			
Severe hearing loss with ringing due to age-related and other hearing loss	(1) DisMod-MR 2.0 of prevalence of all age-related and other hearing loss ; (2) severity split based on hearing loss envelope			
Severe hearing loss due to age-related and other hearing loss	(1) DisMod-MR 2.0 of prevalence of all age-related and other hearing loss ; (2) severity split based on hearing loss envelope			
Profound hearing loss due to age-related and other hearing loss	(1) DisMod-MR 2.0 of prevalence of all age-related and other hearing loss ; (2) severity split based on hearing loss envelope			
Profound hearing loss with ringing due to age-related and other hearing loss	(1) DisMod-MR 2.0 of prevalence of all age-related and other hearing loss ; (2) severity split based on hearing loss envelope			
Complete hearing loss due to age-related and other hearing loss	(1) DisMod-MR 2.0 of prevalence of all age-related and other hearing loss ; (2) severity split based on hearing loss envelope			
Complete hearing loss with ringing due to age-related and other hearing loss	(1) DisMod-MR 2.0 of prevalence of all age-related and other hearing loss ; (2) severity split based on hearing loss envelope			

Appendix Table A.4: Model type and fit metrics: R-squared

Cause, sequelae, or intermediate model	Model description	R-squared (prevalence)	R-squared (incidence)	R-squared (proportion)
Other vision loss				
Vision impairment due to other vision loss	DisMod-MR 2.0 of prevalence of other vision loss from surveys that at least measured vision loss from glaucoma, cataract and macular degeneration explicitly	0.44		
Moderate vision impairment due to other vision loss	DisMod-MR 2.0 of prevalence of other vision loss from surveys that at least measured vision loss from glaucoma, cataract and macular degeneration explicitly, split into moderate and severe			
Severe vision impairment due to other vision loss	DisMod-MR 2.0 of prevalence of other vision loss from surveys that at least measured vision loss from glaucoma, cataract and macular degeneration explicitly, split into moderate and severe			
Blindness due to other vision loss	DisMod-MR 2.0 of prevalence of other vision loss from surveys that at least measured vision loss from glaucoma, cataract and macular degeneration explicitly	0.73		
Other sense organ diseases	DisMod-MR 2.0 based on USA outpatient data	0.59		
Asymptomatic other sense organ diseases	MEPS regression analysis	0.43		
Mild other sense organ diseases	MEPS regression analysis	0.43		
Moderate other sense organ diseases	MEPS regression analysis	0.43		
Severe other sense organ diseases	MEPS regression analysis	0.43		
Oral disorders				
Deciduous caries	DisMod-MR 2.0 of prevalence and incidence data assuming remission that is consistent with average duration of 7 to 18 months	0.27	0.28	
Asymptomatic deciduous caries	Meta-analysis			
Tooth pain due to deciduous caries	Meta-analysis			
Permanent caries	(1) DisMod-MR 2.0 of prevalence, incidence and no excess mortality; remission set to range consistent with a duration of 2 to 12 months; (2) correction for proportion of population who are edentulous	0.65	0.19	
Asymptomatic permanent caries	Meta-analysis			
Tooth pain due to permanent caries	Meta-analysis			
Periodontal diseases	(1) DisMod-MR 2.0 of prevalence, incidence and excess mortality; (2) correction for proportion of population who are edentulous	0.67		
Chronic periodontal diseases	(1) DisMod-MR 2.0 of prevalence, incidence and excess mortality; (2) correction for proportion of population who are edentulous			
Edentulism and severe tooth loss	DisMod-MR 2.0 of prevalence, incidence and excess mortality	0.83		
Asymptomatic edentulism and severe tooth loss	Meta-analysis			
Difficulty eating due to edentulism and severe tooth loss	Meta-analysis			
Other oral disorders	DisMod-MR 2.0 of prevalence	0.53		
Mild other oral disorders	MEPS regression analysis	0.43		
Severe other oral disorders	MEPS regression analysis	0.43		
Injuries	<i>See injuries analysis appendix section for all injuries listed</i>			
Transport injuries				
Road injuries			0.76	
Pedestrian road injuries			0.43	
Cyclist road injuries			0.79	
Motorcyclist road injuries			0.82	
Motor vehicle road injuries			0.39	
Other road injuries			0.43	
Other transport injuries			0.76	
Unintentional injuries				
Falls			0.85	
Drowning			0.45	
Fire, heat, and hot substances			0.57	
Poisonings			0.60	
Exposure to mechanical forces			0.69	
Unintentional firearm injuries			0.64	
Unintentional suffocation			0.68	
Other exposure to mechanical forces			0.69	
Adverse effects of medical treatment			0.79	
Animal contact			0.68	
Venomous animal contact			0.48	
Non-venomous animal contact			0.59	
Foreign body				
Pulmonary aspiration and foreign body in airway			0.68	
Foreign body in eyes			0.63	
Foreign body in other body part			0.62	
Other unintentional injuries			0.78	
Self-harm and interpersonal violence				
Self-harm			0.32	
Interpersonal violence			0.65	
Assault by firearm			0.60	
Assault by sharp object			0.77	
Assault by other means			0.70	
Forces of nature, war, and legal intervention				
Exposure to forces of nature				
Collective violence and legal intervention				

Appendix Table A.5: ICD-9-CM mapped to MEPS data by GBD 2013 cause list

Cause name	Sequelae name	ICD-9-CM
Acne vulgaris	Acne	706
Alcohol use disorders	Alcohol use disorders	291, 303
Alopecia areata	Alopecia	704
Alzheimer disease and other dementias	Alzheimer's disease and other dementias	209-331
Anxiety disorders	Anxiety disorders	300, 308
Asthma	Asthma	493
Atrial fibrillation and flutter	Atrial fibrillation and flutter	427
Attention-deficit/hyperactivity disorder	ADHD	314
Benign prostatic hyperplasia	Hyperplasia of prostate	600
Bipolar disorder	Bipolar affective disorder	296
Bladder cancer	Bladder cancer	188
Brain and nervous system cancer	Brain and nervous system cancers	191-192
Breast cancer	Breast cancer	174-175
Cardiomyopathy and myocarditis	Cardiomyopathy and myocarditis	422, 425
Cataract	Cataracts	366
Cerebrovascular disease	Cerebrovascular disease	342, 430-438
Cervical cancer	Cervix uteri cancer	180
Chromosomal unbalanced rearrangements	Other chromosomal abnormalities	758
Chronic kidney disease	Chronic kidney diseases	581-589
Chronic kidney disease due to hypertension	CKD due to hypertension	403
Chronic obstructive pulmonary disease	Chronic obstructive pulmonary disease (COPD)	490-492, 494, 495, 513, 515-516
Cirrhosis	Cirrhosis of the liver	570-571
Orofacial clefts	Cleft lip and cleft palate	749
Colon and rectum cancer	Colon and rectum cancers	153-154
Conduct disorder	Conduct disorder	312
Congenital heart anomalies	Congenital heart anomalies	745-747
Decubitus ulcer	Skin ulcer	707
Dermatitis	Dermatitis (eczema)	690-692
Diabetes mellitus	Diabetes mellitus	250
Endocrine, metabolic, blood, and immune disorders	Other Endocrine, nutritional, blood and immune disorders	251-259, 270-271, 273, 277, 279, 286-289, 242-246
Endometriosis	Endometriosis	617
Epilepsy	Epilepsy	345
Esophageal cancer	Oesophagus cancer	150
Female infertility due to other causes	Infertility (female)	628
Fungal skin diseases	Dermatophytosis	110-111
Gallbladder and biliary diseases	Gall bladder and bile duct disease	574-576
Gastritis and duodenitis	Gastritis and duodenitis	535
Genital prolapse	Genital prolapse	618
Glaucoma	Glaucoma	365
Gout	Gout	274
HIV/AIDS resulting in other diseases	HIV/AIDS	42
Hodgkin lymphoma	Hodgkin's disease	201
Hypertensive heart disease	Hypertensive heart disease	402, 404
Idiopathic intellectual disability	Intellectual disability	317-319
Inflammatory bowel disease	Noninfective inflammatory bowel disease	555-556, 558
Inguinal, femoral, and abdominal hernia	Inguinal/femoral hernia	550
Interstitial lung disease and pulmonary sarcoidosis	Sarcoidosis	135
Interstitial nephritis and urinary tract infections	Acute tubulointerstitial nephritis , pyelonephritis and Urinary tract infections	590, 595, 597
Iodine deficiency	Goitre and Hypothyroidism	240-241
Iron-deficiency anemia	Iron-deficiency anemia	280-281
Kidney cancer	Kidney and other urinary organ cancers	189
Larynx cancer	Larynx cancer	161
Leukemia	Leukemia	204-208
Liver cancer	Liver cancer	155
Tracheal, bronchus and lung cancer	Trachea, bronchus and lung cancers	162
Major depressive disorder	Unipolar depressive disorders	311
Malignant skin melanoma	Malignant melanoma of skin	172
Maternal hypertensive disorders	Hypertensive disorders of pregnancy	642
Meningitis	Meningitis and encephalitis	36, 48-49, 62-64, 320-323

Appendix Table A.5: ICD-9-CM mapped to MEPS data by GBD 2013 cause list

Cause name	Sequelae name	ICD-9-CM
Migraine	Migraine	346
Lip and oral cavity cancer	Mouth cancer	140-146
Multiple myeloma	Multiple myeloma	203
Multiple sclerosis	Multiple sclerosis	340
Neck pain	Neck pain	723
Neural tube defects	Neural tube defects	740-741
Non-Hodgkin lymphoma	Non-Hodgkin's lymphoma	202
Osteoarthritis	Osteoarthritis	715
Other cardiovascular and circulatory diseases	Other circulatory diseases	420, 423-424, 426, 429, 441-442, 444, 446-448, 451, 453-459
Other chronic respiratory diseases	Other respiratory diseases	470-471, 478, 495, 508, 510-512, 517-519
Other congenital anomalies	Other congenital anomalies	742-744, 748, 750-757, 759
Other gynecological diseases	Other gynecological disorders	610-611, 620-626, 629
Other maternal disorders	Other maternal conditions	643-648, 650-659, 661-665, 667-669, 671-677
Other mental and substance use disorders	Other mental and behavioral disorders	301-302, 306-307, 309-310, 313, 315-316
Other musculoskeletal disorders	Other musculoskeletal disorders	710-713, 716-720, 725-729, 731-739
Other neoplasms	Other malignant neoplasms	152, 158, 160, 163-164, 170-171, 176, 181, 184, 187, 190, 194, 196-198, 200
Other neurological disorders	Other neurological conditions	324-326, 333-337, 341, 344, 347-359
Other nutritional deficiencies	Other nutritional disorders	265-269
Other oral disorders	Other oral	520, 522, 524, 526-529
Other pneumoconiosis	Pneumoconiosis	500-506
Other sense organ diseases	Other sense organ disorders	360, 370-377, 379-380, 384, 386, 388
Other skin and subcutaneous diseases	Residual skin conditions	132, 685, 694-695, 697, 700-703, 705, 709
Other urinary diseases	Other urinary diseases	591, 593, 596, 598-599, 601-608
Otitis media	Otitis media	381-383
Pancreatic cancer	Pancreas cancer	157
Pancreatitis	Pancreatitis	577
Parkinson disease	Parkinson's disease	332
Peptic ulcer disease	Peptic ulcer disease	531-534
Peripheral vascular disease	Peripheral vascular disease	440
Prostate cancer	Prostate cancer	185
Protein-energy malnutrition	Protein-energy malnutrition	260-263
Pruritus	Pruritus	698
Psoriasis	Psoriasis	696
Rheumatic heart disease	Rheumatic heart disease	390-398
Rheumatoid arthritis	Rheumatoid arthritis	714
Scabies	Scabies	133
Schizophrenia	Schizophrenia	293-294, 297-299, 295
Stomach cancer	Stomach cancer	151
Testicular cancer	Testis cancer	186
Thyroid cancer	Thyroid cancer	193
Tuberculosis	Tuberculosis	10-18, 137
Uncorrected refractive error	Refraction and accommodation disorders	367, 368, 378
Urolithiasis	Urolithiasis	592, 594
Urticaria	Urticaria	708
Uterine cancer	Corpus uteri cancer	180
Uterine fibroids	Fibroids	218
Varicella and herpes zoster	Varicella (chickenpox)	52
Vascular intestinal disorders	Vascular insufficiency of intestine	557
Viral skin diseases	Viral wart	78
N/A	Amputation of finger(s) (with or without thumb or toe)	885-886, 895
N/A	Burns	940-949
N/A	Severe chest injury	860-862, 874, 901, 908
N/A	Long term outcome of dislocation of hip/knee/shoulder	831, 835-836, 844
N/A	Injury Requiring Emergency Care	863-869, 902
N/A	Fracture of radius or ulna	813
N/A	Fracture of wrist and other distal part of hand, fracture of foot except ankle	814-819, 827
N/A	Fracture of femur	821
N/A	Fracture of clavicle, scapula, humerus, or skull	800-801, 803, 810-812
N/A	Fracture of Hip	820

Appendix Table A.5: ICD-9-CM mapped to MEPS data by GBD 2013 cause list

Cause name	Sequelae name	ICD-9-CM
N/A	Fracture of patella, tibia, fibula, or ankle	822-824
N/A	Fracture of pelvis	808-809
N/A	Fracture of sternum, rib, or face bone	802, 807, 825-826
N/A	Fracture of vertebral column	805
N/A	Head Injury	804, 850-854, 905
N/A	Injured nerves	951, 953-957
N/A	Open wound, superficial injuries and dislocations	830, 832-834, 837-843, 845-848 870-873, 875-884, 890-894, 900, 903-904, 906, 910-920
N/A	Spinal Cord Lesion	806, 952
N/A	Injury Requiring Urgent Care	925-929, 935-939, 960-989, 990, 992-999
N/A	Allergic rhinitis	477
N/A	Hemolytic anemias	282-285
N/A	Candidiasis	112
N/A	Cerebral palsy	343
N/A	Gastroesophageal reflux disease	530
N/A	Hearing loss not due to other diseases or injuries	385, 387, 389
N/A	Hepatitis	70
N/A	Drug use disorders	292, 304-305
N/A	Other neoplasms	210-217, 219-234, 236-239
N/A	Non-melanoma skin cancer	173
N/A	Unspecified cancer site	149, 159, 165, 179, 183, 195, 199, 235
N/A	Neonatal conditions	760-779
N/A	Osteomyelitis	730
N/A	Unspecified symptoms	780-799
N/A	Pelvic inflammatory disease	614-615
N/A	Poliomyelitis	138
N/A	Pulmonary heart disease	415-417
N/A	Chronic sinusitis	473
N/A	Other vision loss	361-364, 369
N/A	Any heart failure	428
N/A	Angina pectoris	413
N/A	Back pain	721, 724
N/A	Intervertebral disk disorders	722
N/A	Bacterial skin infection (abscess and cellulitis)	35, 680, 683, 686, 135, 681-682
N/A	Bacterial skin infection (impetigo)	684

Web Table A.6-Disability weight lay descriptions

Healthstate ID	Healthstate Name	Healthstate Description	hhsseqid (Healthstate sequela ID?)	Disability Weight
351	Infectious disease, acute episode, mild	has a low fever and mild discomfort, but no difficulty with daily activities.	207	0.006 (0.002-0.012)
352	Infectious disease, acute episode, moderate	has a fever and aches, and feels weak, which causes some difficulty with daily activities.	208	0.051 (0.032-0.074)
353	Infectious disease, acute episode, severe	has a high fever and pain, and feels very weak, which causes great difficulty with daily activities.	209	0.133 (0.088-0.19)
354	Infectious disease, post-acute consequences (fatigue, emotional lability, insomnia)	is always tired and easily upset. The person feels pain all over the body and is depressed.	210	0.219 (0.148-0.308)
355	Diarrhea, mild	has diarrhea three or more times a day with occasional discomfort in the belly.	145	0.074 (0.049-0.104)
356	Diarrhea, moderate	has diarrhea three or more times a day, with painful cramps in the belly and feeling thirsty	146	0.188 (0.125-0.264)
357	Diarrhea, severe	has diarrhea three or more times a day with severe belly cramps. The person is very thirsty and feels nauseous and tired.	147	0.247 (0.164-0.348)
358	Epididymo-orchitis	has swelling and tenderness in the testicles and pain during urination.	155	0.128 (0.086-0.18)
359	Herpes zoster	has a blistering skin rash that causes pain, with some burning and itching.	202	0.058 (0.035-0.09)
360	HIV cases, symptomatic, pre-AIDS	has weight loss, fatigue, and frequent infections.	203	0.274 (0.184-0.377)
361	HIV/AIDS cases, receiving ARV treatment	has occasional fevers and infections. The person takes daily medication that sometimes causes diarrhea.	205	0.078 (0.052-0.111)
362	AIDS cases, not receiving ARV treatment	has severe weight loss, weakness, fatigue, cough and fever, and frequent infections, skin rashes and diarrhea.	204	0.582 (0.406-0.743)
363	Intestinal nematode infections, symptomatic	has cramping pain and a bloated feeling in the belly.	212	0.027 (0.015-0.043)
364	Lymphatic filariasis, symptomatic	has swollen legs with hard and thick skin, which causes difficulty in moving around.	221	0.109 (0.073-0.154)
365	Ear pain	has an ear-ache that causes some difficulty with daily activities.	28	0.013 (0.007-0.024)
366	Tuberculosis, not HIV infected	has a persistent cough and fever, is short of breath, feels weak, and has lost a lot of weight.	102	0.333 (0.234-0.454)
367	Tuberculosis, HIV infected	has a persistent cough and fever, shortness of breath, night sweats, weakness and fatigue and severe weight loss.	249	0.408 (0.274-0.549)
368	Cancer, diagnosis and primary therapy	has pain, nausea, fatigue, weight loss and high anxiety.	127	0.288 (0.193-0.399)
369	Cancer, metastatic	has severe pain, extreme fatigue, weight loss and high anxiety.	128	0.451 (0.307-0.6)
370	Mastectomy	had one of her breasts removed and sometimes has pain or swelling in the arms.	130	0.036 (0.02-0.057)
371	Stoma	has a pouch attached to an opening in the belly to collect and empty stools.	131	0.095 (0.063-0.131)
372	Terminal phase, with medication (for cancers, end-stage kidney/liver disease)	has lost a lot of weight and regularly uses strong medication to avoid constant pain. The person has no appetite, feels nauseous, and needs to spend most of the day in bed.	21	0.54 (0.377-0.687)
373	Terminal phase, without medication (for cancers, end-stage kidney/liver disease)	has lost a lot of weight and has constant pain. The person has no appetite, feels nauseous, and needs to spend most of the day in bed.	129	0.569 (0.389-0.727)
374	Acute myocardial infarction, days 1-2	has severe chest pain that becomes worse with any physical activity. The person feels nauseous, short of breath, and very anxious.	112	0.432 (0.288-0.579)
375	Acute myocardial infarction, days 3-28	gets short of breath after heavy physical activity, and tires easily, but has no problems when at rest. The person has to take medication every day and has some anxiety.	113	0.074 (0.049-0.105)
376	Angina pectoris, mild	has chest pain that occurs with strenuous physical activity, such as running or lifting heavy objects. After a brief rest, the pain goes away.	96	0.033 (0.02-0.052)
377	Angina pectoris, moderate	has chest pain that occurs with moderate physical activity, such as walking uphill or more than half a kilometer (around a quarter-mile) on level ground. After a brief rest, the pain goes away.	115	0.08 (0.052-0.113)
378	Angina pectoris, severe	has chest pain that occurs with minimal physical activity, such as walking only a short distance. After a brief rest, the pain goes away. The person avoids most physical activities because of the pain.	116	0.167 (0.11-0.24)
379	Cardiac conduction disorders and cardiac dysrhythmias	has periods of rapid and irregular heartbeats and occasional fainting.	132	0.224 (0.151-0.312)
380	Claudication	has cramping pains in the legs after walking a medium distance. The pain goes away after a short rest.	136	0.014 (0.007-0.025)
381	Heart failure, mild	is short of breath and easily tires with moderate physical activity, such as walking uphill or more than a quarter-mile on level ground. The person feels comfortable at rest or during activities requiring less effort.	200	0.041 (0.026-0.062)
382	Heart failure, moderate	is short of breath and easily tires with minimal physical activity, such as walking only a short distance. The person feels comfortable at rest but avoids moderate activity.	201	0.072 (0.047-0.103)
383	Heart failure, severe	is short of breath and feels tired when at rest. The person avoids any physical activity, for fear of worsening the breathing problems.	101	0.179 (0.122-0.251)
384	Stroke, long-term consequences, mild	has some difficulty in moving around and some weakness in one hand, but is able to walk without help.	243	0.019 (0.01-0.032)
385	Stroke, long-term consequences, moderate	has some difficulty in moving around, and in using the hands for lifting and holding things, dressing and grooming.	244	0.07 (0.046-0.099)
386	Stroke, long-term consequences, moderate plus cognition problems	has some difficulty in moving around, in using the hands for lifting and holding things, dressing and grooming, and in speaking. The person is often forgetful and confused.	245	0.316 (0.206-0.437)
387	Stroke, long-term consequences, severe	is confined to bed or a wheelchair, has difficulty speaking and depends on others for feeding, toileting and dressing.	246	0.552 (0.377-0.707)
388	Stroke, long-term consequences, severe plus cognition problems	is confined to bed or a wheelchair, depends on others for feeding, toileting and dressing, and has difficulty speaking, thinking clearly and remembering things.	247	0.588 (0.411-0.744)
389	Diabetic foot	has a sore on the foot that is swollen and causes some difficulty in walking.	143	0.02 (0.01-0.034)
390	Diabetic neuropathy	has pain, tingling and numbness in the arms, legs, hands and feet. The person sometimes gets cramps and muscle weakness.	144	0.133 (0.089-0.187)
391	Chronic kidney disease (stage IV)	tires easily, has nausea, reduced appetite and difficulty sleeping.	215	0.104 (0.07-0.147)
392	End-stage renal disease, with kidney transplant	sometimes feels tired and down, and has some difficulty with daily activities.	216	0.024 (0.014-0.039)
393	End-stage renal disease, on dialysis	is tired and has itching, cramps, headache, joint pains and shortness of breath. The person needs intensive medical care every other day lasting about half a day.	217	0.571 (0.398-0.725)
394	Decompensated cirrhosis of the liver	has a swollen belly and swollen legs. The person feels weakness, fatigue and loss of appetite.	135	0.178 (0.123-0.25)
395	Gastric bleeding	vomits blood and feels nauseous.	181	0.325 (0.209-0.462)
396	Crohn disease or ulcerative colitis	has cramping abdominal pain, has diarrhea several times a day, and feels very tired for two months every year. When the person does not have symptoms, there is anxiety about them returning.	104	0.231 (0.156-0.32)
397	Benign prostatic hypertrophy, symptomatic cases	feels the urge to urinate frequently, but when passing urine it comes out slowly and sometimes is painful.	120	0.067 (0.043-0.097)
398	Urinary incontinence	cannot control urinating.	251	0.139 (0.094-0.198)
793	Stress incontinence	loses small amounts of urine without meaning to when coughing, sneezing, laughing or during physical exercise.	345	0.02 (0.011-0.035)
399	Impotence	has difficulty in obtaining or maintaining an erection.	206	0.017 (0.009-0.03)
400	Infertility, primary	wants to have a child and has a fertile partner, but the couple cannot conceive.	1	0.008 (0.003-0.015)
401	Infertility, secondary	has at least one child, and wants to have more children. The person has a fertile partner, but the couple cannot conceive.	2	0.005 (0.002-0.011)
402	Asthma, controlled	has wheezing and cough once a month, which does not cause difficulty with daily activities.	117	0.015 (0.007-0.026)
403	Asthma, partially controlled	has wheezing and cough once a week, which causes some difficulty with daily activities.	118	0.036 (0.022-0.055)
404	Asthma, uncontrolled	has wheezing, cough and shortness of breath more than twice a week, which causes difficulty with daily activities and sometimes wakes the person at night.	119	0.133 (0.086-0.192)
405	COPD and other chronic respiratory problems, mild	has cough and shortness of breath after heavy physical activity, but is able to walk long distances and climb stairs.	138	0.019 (0.011-0.033)
406	COPD and other chronic respiratory problems, moderate	has cough, wheezing and shortness of breath, even after light physical activity. The person feels tired and can walk only short distances or climb only a few stairs.	139	0.225 (0.153-0.31)
407	COPD and other chronic respiratory problems, severe	has cough, wheezing and shortness of breath all the time. The person has great difficulty walking even short distances or climbing any stairs, feels tired when at rest, and is anxious.	140	0.408 (0.273-0.556)
408	Dementia, mild	has some trouble remembering recent events, and finds it hard to concentrate and make decisions and plans.	25	0.069 (0.046-0.099)
409	Dementia, moderate	has memory problems and confusion, feels disoriented, at times hears voices that are not real, and needs help with some daily activities.	26	0.377 (0.252-0.508)

Web Table A.6-Disability weight lay descriptions

Healthstate ID	Healthstate Name	Healthstate Description	hhsqid (Healthstate sequela ID?)	Disability Weight
410	Dementia, severe	has complete memory loss; no longer recognizes close family members; and requires help with all daily activities.	27	0.449 (0.304-0.595)
411	Headache, migraine	has severe, throbbing head pain and nausea that cause great difficulty in daily activities and sometimes confine the person to bed. Moving around, light, and noise make it worse.	184	0.441 (0.294-0.588)
412	Headache, tension-type	has a moderate headache that also affects the neck, which causes difficulty in daily activities.	186	0.037 (0.022-0.057)
413	Headache, medication overuse	has daily headaches, felt as dull pain and often lasting all day, with poor sleep, nausea and fatigue. The person takes medicine for the headaches, which provides little relief but is needed to avoid having worse symptoms.	188	0.217 (0.138-0.311)
414	Multiple sclerosis, mild	has mild loss of feeling in one hand, is a little unsteady while walking, has slight loss of vision in one eye, and often needs to urinate urgently.	106	0.183 (0.124-0.253)
415	Multiple sclerosis, moderate	needs help walking, has difficulty with writing and arm coordination, has loss of vision in one eye and cannot control urinating.	107	0.463 (0.313-0.613)
416	Multiple sclerosis, severe	has slurred speech and difficulty swallowing. The person has weak arms and hands, very limited and stiff leg movement, has loss of vision in both eyes and cannot control urinating.	108	0.719 (0.534-0.858)
417	Epilepsy, treated, seizure free			#N/A
418	Epilepsy, treated, with recent seizures			#N/A
419	Epilepsy, untreated			#N/A
420	Epilepsy, severe			#N/A
745	Epilepsy, severe (seizures >= once per month)	has sudden seizures one or more times each month, with violent muscle contractions and stiffness, loss of consciousness, and loss of urine or bowel control. Between seizures the person has memory loss and difficulty concentrating.	318	0.552 (0.375-0.71)
746	Epilepsy, less severe (seizures < once per month)	has sudden seizures two to five times a year, with violent muscle contractions and stiffness, loss of consciousness, and loss of urine or bowel control.	319	0.263 (0.173-0.367)
421	Parkinson disease, mild	has mild tremors and moves a little slowly, but is able to walk and do daily activities without assistance.	59	0.01 (0.005-0.019)
422	Parkinson disease, moderate	has moderate tremors and moves slowly, which causes some difficulty in walking and daily activities. The person has some trouble swallowing, talking, sleeping, and remembering things.	60	0.267 (0.181-0.372)
423	Parkinson disease, severe	has severe tremors and moves very slowly, which causes great difficulty in walking and daily activities. The person falls easily and has a lot of difficulty talking, swallowing, sleeping, and remembering things.	61	0.575 (0.396-0.73)
747	Alcohol use disorder, very mild	drinks alcohol daily and has difficulty controlling the urge to drink. When sober, the person functions normally, drinks a lot of alcohol and sometimes has difficulty controlling the urge to drink. While intoxicated, the person has difficulty performing daily activities.	320	0.123 (0.082-0.177)
424	Alcohol use disorder, mild	drinks a lot, gets drunk almost every week and has great difficulty controlling the urge to drink. Drinking and recovering cause great difficulty in daily activities, sleep loss, and fatigue.	32	0.235 (0.16-0.327)
425	Alcohol use disorder, moderate	gets drunk almost every day and is unable to control the urge to drink. Drinking and recovering replace most daily activities. The person has difficulty thinking, remembering and communicating, and feels constant pain and fatigue.	33	0.373 (0.248-0.508)
426	Alcohol use disorder, severe	is a little slow in developing physically and mentally, which causes some difficulty in learning but no other difficulties in daily activities.	34	0.57 (0.396-0.732)
427	Fetal alcohol syndrome, mild	is slow in developing physically and mentally, which causes some difficulty in daily activities.	161	0.016 (0.008-0.03)
428	Fetal alcohol syndrome, moderate	is very slow in developing physically and mentally, which causes great difficulty in daily activities.	162	0.056 (0.035-0.083)
429	Fetal alcohol syndrome, severe	uses marijuana at least once a week and has some difficulty controlling the habit. When not using, the person functions normally.	163	0.179 (0.119-0.257)
586	Cannabis dependence, mild	uses marijuana daily and has difficulty controlling the habit. The person sometimes has mood swings, anxiety and hallucinations, and has some difficulty in daily activities.	321	0.039 (0.024-0.06)
430	Cannabis dependence	uses stimulants (drugs) at least once a week and has some difficulty controlling the habit. When not using, the person functions normally.	36	0.266 (0.178-0.364)
583	Amphetamine dependence, mild	uses stimulants (drugs) and has difficulty controlling the habit. The person sometimes has depression, hallucinations and mood swings, and has difficulty in daily activities.	322	0.079 (0.051-0.114)
431	Amphetamine dependence	uses cocaine at least once a week and has some difficulty controlling the habit. When not using, the person functions normally.	153	0.486 (0.329-0.637)
580	Cocaine dependence, mild	uses cocaine and has difficulty controlling the habit. The person sometimes has mood swings, anxiety, paranoia, hallucinations and sleep problems, and has some difficulty in daily activities.	323	0.116 (0.074-0.165)
432	Cocaine dependence	uses heroin (or methadone) daily and has difficulty controlling the habit. When not using, the person functions normally.	154	0.479 (0.324-0.634)
577	Heroin and other opioid dependence, mild	uses heroin daily and has difficulty controlling the habit. When the effects wear off, the person feels severe nausea, agitation, vomiting and fever. The person has a lot of difficulty in daily activities.	324	0.335 (0.221-0.473)
433	Heroin and other opioid dependence	feels mildly anxious and worried, which makes it slightly difficult to concentrate, remember things, and sleep. The person tires easily but is able to perform daily activities.	35	0.697 (0.51-0.843)
434	Anxiety disorders, mild	feels anxious and worried, which makes it difficult to concentrate, remember things, and sleep. The person tires easily and finds it difficult to perform daily activities.	22	0.03 (0.018-0.046)
435	Anxiety disorders, moderate	constantly feels very anxious and worried, which makes it difficult to concentrate, remember things and sleep. The person has lost pleasure in life and thinks about suicide.	23	0.133 (0.091-0.186)
436	Anxiety disorders, severe	feels persistent sadness and has lost interest in usual activities. The person sometimes sleeps badly, feels tired, or has trouble concentrating but still manages to function in daily life with extra effort.	24	0.823 (0.362-0.677)
437	Major depressive disorder, mild episode	has constant sadness and has lost interest in usual activities. The person has some difficulty in daily life, sleeps badly, has trouble concentrating, and sometimes thinks about harming himself (or herself).	285	0.145 (0.099-0.209)
438	Major depressive disorder, moderate episode	has overwhelming, constant sadness and cannot function in daily life. The person sometimes loses touch with reality and wants to harm or kill himself (or herself).	30	0.396 (0.267-0.531)
439	Major depressive disorder, severe episode	is hyperactive, hears and believes things that are not real, and engages in impulsive and aggressive behavior that endanger the person and others.	31	0.658 (0.477-0.807)
440	Bipolar disorder, manic episode	has mild mood swings, irritability and some difficulty with daily activities.	37	0.492 (0.341-0.646)
441	Bipolar disorder, residual state	hears and sees things that are not real and is afraid, confused, and sometimes violent. The person has great difficulty with communication and daily activities, and sometimes wants to harm or kill himself (or herself).	121	0.032 (0.018-0.051)
442	Schizophrenia, acute state	hears and sees things that are not real and has trouble communicating. The person can be forgetful, has difficulty with daily activities, and thinks about hurting himself (or herself).	38	0.588 (0.606-0.9)
443	Schizophrenia, residual state	feels an overwhelming need to starve and exercises excessively to lose weight. The person is very thin, weak and anxious.	238	0.224 (0.411-0.754)
444	Anorexia nervosa	has uncontrolled overeating followed by guilt, starving, and vomiting to lose weight.	39	0.224 (0.15-0.312)
445	Bulimia nervosa	is hyperactive and has difficulty concentrating, remembering things, and completing tasks.	40	0.223 (0.149-0.311)
446	Attention deficit hyperactivity disorder	has frequent behavior problems, which are sometimes violent. The person often has difficulty interacting with other people and feels irritable.	43	0.045 (0.028-0.066)
447	Conduct disorder	has difficulty interacting with other people, and is slow to understand or respond to questions. The person is often preoccupied with one thing and has some difficulty with basic daily activities.	134	0.241 (0.159-0.341)
448	Asperger syndrome	has severe problems interacting with others and difficulty understanding simple questions or directions. The person has great difficulty with basic daily activities and becomes distressed by any change in routine.	42	0.104 (0.071-0.147)
449	Autism	is slow in learning at school. As an adult, the person has some difficulty doing complex or unfamiliar tasks but otherwise functions independently.	41	0.262 (0.176-0.365)
450	Borderline intellectual functioning	has low intelligence and is slow in learning at school. As an adult, the person can live independently, but often needs help to raise children and can only work at simple supervised jobs.	286	0.011 (0.005-0.02)
451	Intellectual disability / mental retardation, mild	has low intelligence, and is slow in learning to speak and to do even simple tasks. As an adult, the person requires a lot of support to live independently and raise children. The person can only work at the simplest supervised jobs.	287	0.043 (0.026-0.064)
452	Intellectual disability / mental retardation, moderate	has very low intelligence and cannot speak more than a few words, needs constant supervision and help with most daily activities, and can do only the simplest tasks.	288	0.1 (0.066-0.142)
453	Intellectual disability / mental retardation, severe	has very low intelligence, has almost no language, and does not understand even the most basic requests or instructions. The person requires constant supervision and help for all activities.	289	0.16 (0.107-0.226)
454	Intellectual disability / mental retardation, profound	is unable to hear and understand another person talking in a noisy place (for example, on an urban street), and has difficulty hearing another person talking even in a quiet place or on the phone.	290	0.2 (0.133-0.285)
455	Hearing loss, mild		307	0.01 (0.004-0.019)
456	Hearing loss, moderate		309	0.027 (0.015-0.042)

Web Table A.6-Disability weight lay descriptions

Healthstate ID	Healthstate Name	Healthstate Description	hhsqid (Healthstate sequela ID?)	Disability Weight
457	Hearing loss, severe	is unable to hear and understand another person talking, even in a quiet place, and unable to take part in a phone conversation. Difficulties with communicating and relating to others cause emotional impact at times (for example worry or depression).	311	0.158 (0.105-0.227)
458	Hearing loss, profound	is unable to hear and understand another person talking, even in a quiet place, is unable to take part in a phone conversation, and has great difficulty hearing anything in any other situation. Difficulties with communicating and relating to others often cause worry, depression or loneliness.	313	0.204 (0.134-0.288)
459	Hearing loss, complete	cannot hear at all in any situation, including even the loudest sounds, and cannot communicate verbally or use a phone. Difficulties with communicating and relating to others often cause worry, depression or loneliness.	315	0.215 (0.144-0.307)
460	Hearing loss, mild, with ringing	has great difficulty hearing and understanding another person talking in a noisy place (for example, on an urban street), and sometimes has annoying ringing in the ears.	308	0.021 (0.012-0.036)
461	Hearing loss, moderate, with ringing	is unable to hear and understand another person talking in a noisy place (for example, on an urban street), has difficulty hearing another person talking even in a quiet place or on the phone, and has annoying ringing in the ears for 5 minutes at a time, almost every day.	310	0.074 (0.049-0.107)
462	Hearing loss, severe, with ringing	is unable to hear and understand another person talking, even in a quiet place, is unable to take part in a phone conversation, and has annoying ringing in the ears for more than 5 minutes at a time, almost every day. Difficulties with communicating and relating to others cause emotional impact at times (for example worry or depression).	312	0.261 (0.175-0.36)
463	Hearing loss, profound, with ringing	is unable to hear and understand another person talking, even in a quiet place, is unable to take part in a phone conversation, has great difficulty hearing anything in any other situation, and has annoying ringing in the ears for more than 5 minutes at a time, several times a day. Difficulties with communicating and relating to others often cause worry, depression, or loneliness.	314	0.277 (0.182-0.387)
464	Hearing loss, complete, with ringing	cannot hear at all in any situation, including even the loudest sounds, and cannot communicate verbally or use a phone, and has very annoying ringing in the ears for more than half of the day. Difficulties with communicating and relating to others often cause worry, depression or loneliness.	316	0.316 (0.212-0.435)
465	Distance vision, mild impairment	has some difficulty with distance vision, for example reading signs, but no other problems with eyesight.	3	0.003 (0.001-0.007)
466	Distance vision, moderate impairment	has vision problems that make it difficult to recognize faces or objects across a room.	4	0.031 (0.019-0.049)
467	Distance vision, severe impairment	has severe vision loss, which causes difficulty in daily activities, some emotional impact (for example worry), and some difficulty going outside the home without assistance.	5	0.184 (0.125-0.258)
468	Distance vision blindness	is completely blind, which causes great difficulty in some daily activities, worry and anxiety, and great difficulty going outside the home without assistance.	6	0.187 (0.124-0.26)
469	Presbyopia	has difficulty seeing things that are nearer than 3 feet, but has no difficulty with seeing things at a distance.	252	0.011 (0.005-0.02)
704	Distance vision, monocular	is blind in one eye and has difficulty judging distances	79	0.017 (0.009-0.029)
748	Low back pain, mild	has mild back pain, which causes some difficulty dressing, standing, and lifting things.	325	0.02 (0.011-0.035)
749	Low back pain, moderate	has moderate back pain, which causes difficulty dressing, sitting, standing, walking, and lifting things.	326	0.054 (0.035-0.079)
470	Back pain, severe, without leg pain	has severe back pain, which causes difficulty dressing, sitting, standing, walking, and lifting things. The person sleeps poorly and feels worried.	44	0.272 (0.182-0.373)
471	Back pain, severe, with leg pain	has severe back and leg pain, which causes difficulty dressing, sitting, standing, walking, and lifting things. The person sleeps poorly and feels worried.	45	0.325 (0.219-0.446)
472	Back pain, most severe, without leg pain	has constant back pain, which causes difficulty dressing, sitting, standing, walking, and lifting things. The person sleeps poorly, is worried, and has lost some enjoyment in life.	46	0.372 (0.25-0.506)
473	Back pain, most severe, with leg pain	has constant back and leg pain, which causes difficulty dressing, sitting, standing, walking, and lifting things. The person sleeps poorly, is worried, and has lost some enjoyment in life.	47	0.384 (0.256-0.518)
474	Neck pain, mild	has neck pain, and has difficulty turning the head and lifting things.	283	0.053 (0.034-0.078)
476	Neck pain, moderate	has constant neck pain, and has difficulty turning the head, holding arms up, and lifting things	284	0.114 (0.075-0.162)
475	Neck pain, severe	has severe neck pain, and difficulty turning the head and lifting things. The person gets headaches and arm pain, sleeps poorly, and feels tired and worried.	48	0.229 (0.153-0.317)
477	Neck pain, most severe	has constant neck pain and arm pain, and difficulty turning the head, holding arms up, and lifting things. The person gets headaches, sleeps poorly, and feels tired and worried.	49	0.304 (0.202-0.415)
478	Musculoskeletal problems, lower limbs, mild	has pain in the leg, which causes some difficulty running, walking long distances, and getting up and down.	223	0.023 (0.013-0.037)
479	Musculoskeletal problems, lower limbs, moderate	has moderate pain in the leg, which makes the person limp, and causes some difficulty walking, standing, lifting and carrying heavy things, getting up and down and sleeping.	53	0.079 (0.054-0.11)
480	Musculoskeletal problems, lower limbs, severe	has severe pain in the leg, which makes the person limp and causes a lot of difficulty walking, standing, lifting and carrying heavy things, getting up and down, and sleeping.	52	0.165 (0.112-0.232)
481	Musculoskeletal problems, upper limbs, mild	has mild pain and stiffness in the arms and hands. The person has some difficulty lifting, carrying and holding things.	226	0.028 (0.017-0.045)
482	Musculoskeletal problems, upper limbs, moderate	has moderate pain and stiffness in the arms and hands, which causes difficulty lifting, carrying, and holding things, and trouble sleeping because of the pain.	55	0.117 (0.08-0.163)
483	Musculoskeletal problems, generalized, moderate	has pain and deformity in most joints, causing difficulty moving around, getting up and down, and using the hands for lifting and carrying. The person often feels fatigue.	224	0.317 (0.216-0.44)
484	Musculoskeletal problems, generalized, severe	has severe, constant pain and deformity in most joints, causing difficulty moving around, getting up and down, eating, dressing, lifting, carrying and using the hands. The person often feels sadness, anxiety and extreme fatigue.	225	0.581 (0.403-0.739)
485	Gout, acute	has severe pain and swelling in the leg, making it very difficult to get up and down, stand, walk, lift, and carry heavy things. The person has trouble sleeping because of the pain.	54	0.295 (0.196-0.409)
486	Amputation of finger(s), excluding thumb	has lost a finger of one hand. At times there is pain and tingling in the stump.	295	0.005 (0.002-0.01)
487	Amputation of thumb (long term)	has lost one thumb, causing some difficulty in using the hand, pain, and tingling in the stump.	86	0.011 (0.005-0.021)
488	Amputation of one upper limb (long term, with treatment)	has lost one hand and part of the arm, leaving pain and tingling in the stump. The person has an artificial arm that makes it possible to lift objects and do daily activities such as cooking, with some extra effort.	294	0.039 (0.024-0.059)
756	Amputation of one upper limb (long term, without treatment)	has lost one hand and part of the arm, leaving pain and tingling in the stump. The person needs help from others to lift objects or do daily activities such as cooking.	328	0.118 (0.079-0.167)
489	Amputation of both upper limbs (long term, with treatment)	has lost part of both arms, leaving pain and tingling in the stumps. The person has two artificial arms that make it possible to do daily activities, with a great deal of extra effort.	300	0.123 (0.081-0.176)
490	Amputation of both upper limbs (long term, without treatment)	has lost part of both arms, leaving pain and tingling in the stumps. The person needs a great deal of help from others to do even basic daily activities such as eating and using the toilet, and the person is very limited in other activities.	299	0.383 (0.251-0.525)
491	Amputation of toe(s)	has lost one toe, leaving occasional pain and tingling in the stump.	114	0.006 (0.002-0.012)
492	Amputation of one lower limb (long term, with treatment)	has lost part of one leg, leaving pain and tingling in the stump. The person has an artificial leg that helps in moving around.	296	0.039 (0.023-0.059)
493	Amputation of one lower limb (long term, without treatment)	has lost part of one leg, leaving pain and tingling in the stump. The person does not have an artificial leg, has frequent sores, and uses crutches.	89	0.173 (0.118-0.24)
494	Amputation of both lower limbs (long term, with treatment)	has lost part of both legs, leaving pain and tingling in the stumps. The person has two artificial legs that make moving around possible, with extra effort.	297	0.088 (0.057-0.124)
495	Amputation of both lower limbs (long term, without treatment)	has lost part of both legs, leaving pain, tingling, and frequent sores in the stumps. The person has great difficulty moving around, has episodes of depression and anxiety, and needs help from others to do many daily activities.	298	0.443 (0.297-0.589)
496	Burns, <20% total burned surface area without lower airway burns (short term, with or without treatment)	has a burn on part of the body. Parts of the burned area are painful, and other parts have lost feeling.	125	0.141 (0.094-0.196)
497	Burns, <20% total burned surface area or <10% total burned surface area if head/neck or hands/wrist involved (long term, with or without treatment)	has scars caused by a burn. The scars are sometimes painful and itchy.	73	0.016 (0.008-0.028)
498	Burns, >20% total burned surface area (short term, with or without treatment)	has a painful burn over a large part of the body. Parts of the burned area have lost feeling, and the person feels anxious and unwell.	126	0.314 (0.211-0.441)
499	Burns, >20% total burned surface area or >10% total burned surface area if head/neck or hands/wrist involved (long term, with treatment)	has scars caused by burns over a large part of the body. The scars are frequently painful and itchy, and the person is often sad.	71	0.135 (0.092-0.19)
500	Burns, >20% total burned surface area or >10% total burned surface area if head/neck or hands/wrist involved (long term, without treatment)	has severe, disfiguring and itchy scars caused by burns over a large part of the body. The person cannot move some joints, feels sad, and has great difficulty with self-care such as dressing and toileting.	72	0.455 (0.302-0.601)
501	Lower airway burns (with or without treatment)	has a burn in the throat and lungs, which causes great difficulty breathing and a lot of anxiety.	124	0.376 (0.24-0.524)
502	Crush injury (short or long term, with or without treatment)	had part of the body crushed, leaving pain, swelling, tingling and limited feeling in the affected area.	141	0.132 (0.089-0.189)
503	Dislocation of hip (long term, with or without treatment)	walks with a limp and feels discomfort when walking.	151	0.016 (0.008-0.028)
504	Dislocation of knee (long term, with or without treatment)	has a knee out of joint, causing pain and difficulty moving the knee, which sometimes gives way. The person needs crutches for walking and help with self-care such as dressing.	93	0.113 (0.075-0.16)
505	Dislocation of shoulder (long term, with or without treatment)	has a shoulder that is out of joint, causing pain and difficulty moving. The person has difficulty with daily activities such as dressing and cooking.	92	0.062 (0.041-0.088)

Web Table A.6-Disability weight lay descriptions

Healthstate ID	Healthstate Name	Healthstate Description	hhsseqid (Healthstate sequela ID?)	Disability Weight
506	Other injuries of muscle and tendon (includes sprains, strains and dislocations other than shoulder, knee, hip)	has a strained muscle that causes pain and swelling.	227	0.038 (0.003-0.015)
507	Drowning and nonfatal submersion (short or long term, with or without treatment)	has breathlessness, anxiety, cough, and vomiting.	152	0.247 (0.164-0.341)
508	Fracture of clavicle, scapula or humerus (short or long term, with or without treatment)	has a broken shoulder bone, which is painful and swollen. The person cannot use the affected arm and has difficulty with getting dressed.	166	0.035 (0.021-0.053)
509	Fracture of face bone (short or long term, with or without treatment)	has a broken cheek bone or a broken nose or chipped teeth, with swelling and severe pain.	305	0.067 (0.044-0.097)
510	Fracture of foot bones (short term, with or without treatment)	has a broken foot bone, which causes pain, swelling, and difficulty walking.	168	0.026 (0.015-0.043)
511	Fracture of foot bones (long term, without treatment)	had a broken foot in the past that did not heal properly. The person now has pain in the foot and has some difficulty walking.	169	0.026 (0.015-0.042)
512	Fracture of hand (short term, with or without treatment)	has a broken hand, causing pain and swelling.	170	0.01 (0.005-0.019)
513	Fracture of hand (long term, without treatment)	has stiffness in the hand and a weak grip.	171	0.014 (0.007-0.025)
514	Fracture of neck of femur (short term, with or without treatment)	has broken a hip and is in pain. The person cannot stand or walk, and needs help washing, dressing, and going to the toilet.	172	0.258 (0.172-0.356)
515	Fracture of neck of femur (long term, with treatment)	had a broken hip in the past, which was fixed with treatment. The person can only walk short distances, has discomfort when moving around, and has some difficulty in daily activities.	75	0.058 (0.038-0.084)
516	Fracture of neck of femur (long term, without treatment)	had a broken hip bone in the past, which was never treated and did not heal properly. The person cannot get out of bed and needs help washing and going to the toilet.	74	0.402 (0.269-0.541)
517	Fracture, other than femoral neck (short term, with or without treatment)	has a broken thigh bone. The person has severe pain and swelling and cannot walk.	179	0.111 (0.074-0.156)
518	Fracture, other than femoral neck (long term, without treatment)	had a broken thigh bone in the past, which was never treated and did not heal properly. The person now has a limp and discomfort when walking.	76	0.042 (0.027-0.063)
519	Fracture of patella, tibia or fibula or ankle (short term, with or without treatment)	has a broken shin bone, which causes severe pain, swelling, and difficulty walking.	173	0.05 (0.032-0.075)
520	Fracture of patella, tibia or fibula or ankle (long term, with or without treatment)	had a broken shin bone in the past that did not heal properly. The person has pain in the knee and ankle, and has difficulty walking.	82	0.055 (0.036-0.081)
521	Fracture of pelvis (short term)	has a broken pelvis bone, with swelling and bruising. The person has severe pain, and cannot walk or do daily activities.	174	0.279 (0.188-0.384)
522	Fracture of pelvis (long term)	had a broken pelvis in the past and now walks with a limp. There is often pain in the back and groin, and when urinating and sitting for a long time.	78	0.182 (0.123-0.253)
523	Fracture of radius or ulna (short term, with or without treatment)	has a broken forearm, which causes severe pain, swelling, and limited movement.	175	0.028 (0.016-0.046)
524	Fracture of radius or ulna (long term, without treatment)	had a broken forearm in the past that did not heal properly, causing some pain and limited movement in the elbow and wrist. The person has difficulty with daily activities such as dressing.	81	0.043 (0.028-0.064)
525	Fracture of skull (short or long term, with or without treatment)	has a broken skull, but does not have brain damage. The broken area is painful and swollen.	176	0.071 (0.048-0.1)
526	Fracture of sternum and/or fracture of one or two ribs (short term, with or without treatment)	has a broken rib that causes severe pain in the chest, especially when breathing in. The person has difficulty with daily activities such as dressing.	177	0.103 (0.068-0.145)
527	Fracture of vertebral column (short or long term, with or without treatment)	has broken back bones and is in pain, but still has full use of arms and legs.	178	0.111 (0.075-0.156)
528	Fractures, treated (long term)	has slight pain in a bone that was broken in the past.	180	0.005 (0.002-0.01)
529	Injured nerves (short term)	has a nerve injury, which causes difficulty moving and some loss of feeling in the affected area.	211	0.1 (0.067-0.14)
530	Injured nerves (long term)	had a nerve injury in the past, which continues to cause some difficulty moving. The person often injures the affected part because it is numb.	80	0.113 (0.076-0.157)
531	Injury to eyes (short term)	has an injury to one eye, which causes pain and difficulty seeing.	160	0.054 (0.035-0.081)
532	Severe traumatic brain injury, short term (with or without treatment)	cannot concentrate and has headaches, memory problems, dizziness, and feels angry.	123	0.214 (0.141-0.297)
533	Traumatic brain injury, long-term consequences, minor (with or without treatment)	has episodes of headaches, memory problems, and difficulty concentrating.	70	0.094 (0.063-0.133)
534	Traumatic brain injury, long-term consequences, moderate (with or without treatment)	has frequent headaches, memory problems, difficulty concentrating, and dizziness. The person is often anxious and moody.	68	0.231 (0.156-0.324)
535	Traumatic brain injury, long-term consequences, severe (with or without treatment)	cannot think clearly and has frequent headaches, memory problems, difficulty concentrating and dizziness. The person is often anxious and moody, and depends on others for feeding, toileting, dressing and walking.	69	0.637 (0.462-0.789)
536	Open wound (short term, with or without treatment)	has a cut in the skin, which causes pain and numbness around the cut.	234	0.006 (0.002-0.012)
537	Poisoning (short term with or without treatment)	has drowsiness, stomach pain and vomiting.	237	0.163 (0.109-0.227)
538	Severe chest injury (long term, with or without treatment)	had a severe chest injury in the past that has now healed. The person still gets breathless when walking and feels discomfort in the chest.	77	0.047 (0.03-0.07)
539	Severe chest injury (short term, with or without treatment)	has a serious chest injury, which causes severe pain, shortness of breath and anxiety.	133	0.369 (0.248-0.501)
540	Spinal cord lesion below neck level (treated)	is paralyzed from the waist down, cannot feel or move the legs and has difficulties with urine and bowel control. The person uses a wheelchair to move around.	301	0.296 (0.198-0.414)
541	Spinal cord lesion below neck level (untreated)	is paralyzed from the waist down, cannot feel or move the legs and has difficulties with urine and bowel control. Legs are in fixed, bent positions, and the person gets frequent infections and pressure sores.	302	0.623 (0.434-0.777)
542	Spinal cord lesion at neck level (treated)	is paralyzed from the neck down, with no feeling or control over any part of the body below the neck, and no urine or bowel control.	303	0.589 (0.415-0.748)
543	Spinal cord lesion at neck level (untreated)	is paralyzed from the neck down, with no feeling or control over any part of the body below the neck, and no urine or bowel control. Arms and legs are in fixed, bent positions, and the person gets frequent infections and pressure sores.	304	0.732 (0.544-0.871)
750	Concussion	has headaches, dizziness, nausea and difficulty concentrating.	354	0.11 (0.074-0.158)
544	Abdominopelvic problem, mild	has some pain in the belly that causes nausea but does not interfere with daily activities.	109	0.011 (0.005-0.021)
545	Abdominopelvic problem, moderate	has pain in the belly and feels nauseous. The person has difficulties with daily activities.	110	0.114 (0.078-0.159)
546	Abdominopelvic problem, severe	has severe pain in the belly and feels nauseous. The person is anxious and unable to carry out daily activities.	111	0.324 (0.22-0.442)
547	Anemia, mild	feels slightly tired and weak at times, but this does not interfere with normal daily activities.	13	0.004 (0.001-0.008)
548	Anemia, moderate	feels moderate fatigue, weakness, and shortness of breath after exercise, making daily activities more difficult.	14	0.052 (0.034-0.076)
549	Anemia, severe	feels very weak, tired and short of breath, and has problems with activities that require physical effort or deep concentration.	15	0.149 (0.101-0.209)
550	Periodontitis	has minor bleeding of the gums from time to time, with mild discomfort.	280	0.007 (0.003-0.014)
551	Dental caries, symptomatic	has a toothache, which causes some difficulty in eating.	236	0.01 (0.005-0.019)
552	Severe tooth loss	has lost more than 20 teeth including front and back, and has great difficulty in eating meat, fruits, and vegetables.	94	0.067 (0.045-0.095)
553	Disfigurement, level 1	has a slight, visible physical deformity that others notice, which causes some worry and discomfort.	65	0.011 (0.005-0.021)
554	Disfigurement, level 2	has a visible physical deformity that causes others to stare and comment. As a result, the person is worried and has trouble sleeping and concentrating.	66	0.067 (0.044-0.096)
555	Disfigurement, level 3	has an obvious physical deformity that makes others uncomfortable, which causes the person to avoid social contact, feel worried, sleep poorly, and think about suicide.	67	0.405 (0.275-0.546)
556	Disfigurement, level 1 with itch/pain	has a slight, visible physical deformity that is sometimes sore or itchy. Others notice the deformity, which causes some worry and discomfort.	148	0.027 (0.015-0.042)
557	Disfigurement, level 2, with itch/pain	has a visible physical deformity that is sore and itchy. Other people stare and comment, which causes the person to worry. The person has trouble sleeping and concentrating.	149	0.188 (0.125-0.267)
558	Disfigurement, level 3, with itch/pain	has an obvious physical deformity that is very painful and itchy. The physical deformity makes others uncomfortable, which causes the person to avoid social contact, feel worried, sleep poorly, and think about suicide.	150	0.576 (0.401-0.731)
559	Generic uncomplicated disease: worry and daily medication	has a chronic disease that requires medication every day and causes some worry but minimal interference with daily activities.	182	0.049 (0.031-0.072)
560	Generic uncomplicated disease: anxiety about diagnosis	has a disease diagnosis that causes some worry but minimal interference with daily activities.	306	0.012 (0.006-0.023)
561	Iodine-deficiency goiter	has a large mass in the front of the neck. The person sometimes has weakness and fatigue, constipation and weight gain.	213	0.199 (0.133-0.276)
562	Kwashiorkor	is very tired and irritable and has diarrhea.	218	0.051 (0.031-0.079)
563	Severe wasting	is extremely skinny and has no energy.	254	0.128 (0.082-0.183)
564	Speech problems	has difficulty speaking, and others find it difficult to understand.	219	0.051 (0.032-0.078)

Web Table A.6-Disability weight lay descriptions

Healthstate ID	Healthstate Name	Healthstate Description	hhsqid (Healthstate sequela ID?)	Disability Weight
565	Motor impairment, mild	has some difficulty in moving around but is able to walk without help.	228	0.01 (0.005-0.019)
566	Motor impairment, moderate	has some difficulty in moving around, and difficulty in lifting and holding objects, dressing and sitting upright, but is able to walk without help.	229	0.061 (0.04-0.089)
567	Motor impairment, severe	is unable to move around without help, and is not able to lift or hold objects, get dressed or sit upright.	230	0.402 (0.268-0.545)
568	Motor plus cognitive impairments, mild	has some difficulty in moving around but is able to walk without help. The person is slow in learning at school. As an adult, the person has some difficulty doing complex or unfamiliar tasks but otherwise functions independently.	291	0.031 (0.018-0.05)
569	Motor plus cognitive impairments, moderate	has some difficulty in moving around, holding objects, dressing and sitting upright, but can walk without help. The person has low intelligence and is slow in learning to speak and to do simple tasks.	292	0.203 (0.134-0.29)
570	Motor plus cognitive impairments, severe	cannot move around without help, and cannot lift or hold objects, get dressed or sit upright. The person also has very low intelligence, speaks few words, and needs constant supervision and help with all daily activities.	293	0.542 (0.374-0.702)
571	Rectovaginal fistula	has an abnormal opening between her vagina and rectum causing flatulence and feces to escape through the vagina. The person gets infections in her vagina, and has pain when urinating.	164	0.501 (0.339-0.657)
572	Vesicovaginal fistula	has an abnormal opening between the bladder and the vagina, which makes her unable to control urinating. The woman is anxious and depressed.	165	0.342 (0.227-0.478)
589	Harmful alcohol use	(custom DW from MEPS)		#N/A
573	Other cardiovascular and circulatory disease	(custom DW from MEPS)		#N/A

851	Severe COPD and other chronic respiratory, with moderate heart failure			#N/A
852	Severe COPD and other chronic respiratory, with severe heart failure			#N/A
853	Mild Anemia with moderate abdominopelvic problem			#N/A
854	Moderate Anemia with moderate abdominopelvic problem			#N/A
855	Severe Anemia with moderate abdominopelvic problem			#N/A

Appendix Table A.7: Sequelae severity distribution descriptions

Sequela name	Severity description
Early HIV	has a disease diagnosis that causes some worry but minimal interference with daily activities
Symptomatic HIV	HIV infection, WHO clinical stage 2 or 3 not meeting criteria for AIDS
AIDS with antiretroviral treatment	AIDS with antiretroviral treatment
AIDS without antiretroviral treatment	AIDS without antiretroviral treatment
Mild diarrheal diseases	mild diarrhea causing occasional discomfort
Moderate diarrheal diseases	diarrhea with painful cramps and thirst
Severe diarrheal diseases	diarrhea with severe cramps and dehydration
Guillain-Barré syndrome due to diarrheal diseases	paralysis from the waist down
Acute typhoid infection	moderate infectious disease episode with fever, aches and fatigue
Severe typhoid fever	severe infectious disease episode with high fever, pain and severe fatigue
Intestinal perforation due to typhoid	severe abdominal pain and nausea due to intestinal perforation
Gastrointestinal bleeding due to typhoid	has gastrointestinal bleeding due to typhoid infection, resulting in vomiting blood and nausea
Acute paratyphoid infection	mild infectious disease episode with low fever and mild discomfort
Moderate paratyphoid fever	moderate infectious disease episode with fever, aches and fatigue
Severe paratyphoid fever	severe infectious disease episode with high fever, pain and severe fatigue
Intestinal perforation due to paratyphoid	severe abdominal pain and nausea due to intestinal perforation
Moderate lower respiratory infections	moderate infectious disease episode with fever, aches and fatigue
Severe lower respiratory infections	severe infectious disease episode with high fever, pain and severe fatigue
Guillain-Barré syndrome due to lower respiratory infections	paralysis from the waist down
Mild upper respiratory infections	mild infectious disease episode with low fever and mild discomfort
Moderate upper respiratory infections	moderate infectious disease episode with fever, aches and fatigue
Guillain-Barré syndrome due to upper respiratory infections	paralysis from the waist down
Acute otitis media	acute episode of otitis media with fever and ear pain
Severe infectious complications due to chronic otitis media	subperiosteal abscess, meningitis or brain abscess as a complication of chronic otitis media
Moderate hearing loss due to chronic otitis media	moderate hearing loss (35-49dB)
Moderate hearing loss with ringing due to chronic otitis media	moderate hearing loss (35-49dB) with ringing
Moderately severe hearing loss due to otitis media	moderately severe hearing loss (50-64dB)
Moderately severe hearing loss with ringing due to otitis media	moderately severe hearing loss (50-64dB) with ringing
Severe hearing loss due to otitis media	severe hearing loss (65-79dB)
Severe hearing loss with ringing due to otitis media	severe hearing loss (65-79dB) with ringing
Profound hearing loss due to otitis media	profound hearing loss (80-94dB)
Profound hearing loss with ringing due to otitis media	profound hearing loss (80-94dB) with ringing
Complete hearing loss due to otitis media	complete hearing loss (95dB+)
Complete hearing loss with ringing due to otitis media	complete hearing loss (95dB+) with ringing
Vertigo with mild hearing loss due to chronic otitis media	short spells of dizziness and loss of balance with mild hearing loss (20-34dB)
Vertigo with mild hearing loss and ringing due to chronic otitis media	short spells of dizziness and loss of balance with mild hearing loss (20-34dB) and ringing
Mild hearing loss due to chronic otitis media	mild hearing loss (20-34dB)

Appendix Table A.7: Sequelae severity distribution descriptions

Sequela name	Severity description
Mild hearing loss with ringing due to chronic otitis media	mild hearing loss (20-34dB) with ringing
Acute pneumococcal meningitis	severe infectious disease episode with high fever, pain and severe fatigue
Mild behavioral problems due to pneumococcal meningitis	mild behavioral problems
Mild motor impairment due to long term due to pneumococcal meningitis	mild motor impairment (muscle weakness and some problems with gait or balance)
Mild motor plus cognitive impairments due to pneumococcal meningitis	mild motor impairment (muscle weakness and some problems with gait or balance) plus intellectual disability (IQ 70-84)
Borderline intellectual disability due to pneumococcal meningitis	intellectual disability (IQ 70-84)
Monocular distance vision loss due to pneumococcal meningitis	blind in one eye (vision <3/60) but not in the other due to pneumococcal meningitis infection
Mild intellectual disability due to pneumococcal meningitis	intellectual disability (IQ 50-69)
Moderate motor impairment due to pneumococcal meningitis	moderate motor impairment (spasticity and paresis but able to walk)
Severe motor impairment due to pneumococcal meningitis	severe motor impairment (unable to walk)
Moderate motor plus cognitive impairments due to pneumococcal meningitis	moderate motor (spasticity and paresis but able to walk) plus intellectual disability (IQ <70)
Severe motor plus cognitive impairments due to pneumococcal meningitis	severe motor impairment (unable to walk) plus intellectual disability (IQ <70)
Epilepsy due to pneumococcal meningitis	epilepsy
Blindness due to pneumococcal meningitis	blindness (vision <3/60 in better eye)
Mild hearing loss due to pneumococcal meningitis	mild hearing loss (20-34dB)
Mild hearing loss with ringing due to pneumococcal meningitis	mild hearing loss (20-34dB) with ringing
Moderate hearing loss due to pneumococcal meningitis	moderate hearing loss (35-49dB)
Moderate hearing loss with ringing due to pneumococcal meningitis	moderate hearing loss (35-49dB) with ringing
Moderately severe hearing loss due to pneumococcal meningitis	moderately severe hearing loss (50-64dB)
Moderately severe hearing loss with ringing due to pneumococcal meningitis	moderately severe hearing loss (50-64dB) with ringing
Severe hearing loss due to pneumococcal meningitis	severe hearing loss (65-79dB)
Severe hearing loss with ringing due to pneumococcal meningitis	severe hearing loss (65-79dB) with ringing
Profound hearing loss due to pneumococcal meningitis	profound hearing loss (80-94dB)
Profound hearing loss with ringing due to pneumococcal meningitis	profound hearing loss (80-94dB) with ringing
Complete hearing loss due to pneumococcal meningitis	complete hearing loss (95dB+)
Complete hearing loss with ringing due to pneumococcal meningitis	complete hearing loss (95dB+) with ringing
Acute H influenzae type B meningitis	severe infectious disease episode with high fever, pain and severe fatigue
Mild behavioral problems due to H influenzae type B meningitis	mild behavioral problems
Mild motor impairment due to long term due to H influenzae type B meningitis	mild motor impairment (muscle weakness and some problems with gait or balance)

Appendix Table A.7: Sequelae severity distribution descriptions

Sequela name	Severity description
Mild motor plus cognitive impairments due to H influenzae type B meningitis	mild motor impairment (muscle weakness and some problems with gait or balance) plus intellectual disability (IQ 70-84)
Borderline intellectual disability due to H influenzae type B meningitis	intellectual disability (IQ 70-84)
Monocular distance vision loss due to H influenzae type B meningitis	blind in one eye (vision <3/60) but not in the other due to H influenzae type B meningitis infection
Mild intellectual disability due to H influenzae type B meningitis	intellectual disability (IQ 50-69)
Moderate motor impairment due to H influenzae type B meningitis	moderate motor impairment (spasticity and paresis but able to walk)
Severe motor impairment due to H influenzae type B meningitis	severe motor impairment (unable to walk)
Moderate motor plus cognitive impairments due to H influenzae type B meningitis	moderate motor (spasticity and paresis but able to walk) plus intellectual disability (IQ <70)
Severe motor plus cognitive impairments due to H influenzae type B meningitis	severe motor impairment (unable to walk) plus intellectual disability (IQ <70)
Epilepsy due to H influenzae type B meningitis	epilepsy
Blindness due to H influenzae type B meningitis	blindness (vision <3/60 in better eye)
Mild hearing loss due to H influenzae type B meningitis	mild hearing loss (20-34dB)
Mild hearing loss with ringing due to H influenzae type B meningitis	mild hearing loss (20-34dB) with ringing
Moderate hearing loss due to H influenzae type B meningitis	moderate hearing loss (35-49dB)
Moderate hearing loss with ringing due to H influenzae type B meningitis	moderate hearing loss (35-49dB) with ringing
Moderately severe hearing loss due to H influenzae type B meningitis	moderately severe hearing loss (50-64dB)
Moderately severe hearing loss with ringing due to H influenzae type B meningitis	moderately severe hearing loss (50-64dB) with ringing
Severe hearing loss due to H influenzae type B meningitis	severe hearing loss (65-79dB)
Severe hearing loss with ringing due to H influenzae type B meningitis	severe hearing loss (65-79dB) with ringing
Profound hearing loss due to H influenzae type B meningitis	profound hearing loss (80-94dB)
Profound hearing loss with ringing due to H influenzae type B meningitis	profound hearing loss (80-94dB) with ringing
Complete hearing loss due to H influenzae type B meningitis	complete hearing loss (95dB+)
Complete hearing loss with ringing due to H influenzae type B meningitis	complete hearing loss (95dB+) with ringing
Acute meningococcal meningitis	severe infectious disease episode with high fever, pain and severe fatigue
Mild behavioral problems due to meningococcal meningitis	mild behavioral problems
Mild motor impairment due to long term due to meningococcal meningitis	mild motor impairment (muscle weakness and some problems with gait or balance)
Mild motor plus cognitive impairments due to meningococcal meningitis	mild motor impairment (muscle weakness and some problems with gait or balance) plus intellectual disability (IQ 70-84)
Borderline intellectual disability due to meningococcal meningitis	intellectual disability (IQ 70-84)
Monocular distance vision loss due to meningococcal meningitis	blind in one eye (vision <3/60) but not in the other due to meningococcal meningitis infection

Appendix Table A.7: Sequelae severity distribution descriptions

Sequela name	Severity description
Mild intellectual disability due to meningococcal meningitis	intellectual disability (IQ 50-69)
Moderate motor impairment due to meningococcal meningitis	moderate motor impairment (spasticity and paresis but able to walk)
Severe motor impairment due to meningococcal meningitis	severe motor impairment (unable to walk)
Moderate motor plus cognitive impairments due to meningococcal meningitis	moderate motor (spasticity and paresis but able to walk) plus intellectual disability (IQ <70)
Severe motor plus cognitive impairments due to meningococcal meningitis	severe motor impairment (unable to walk) plus intellectual disability (IQ <70)
Epilepsy due to meningococcal meningitis	epilepsy
Blindness due to meningococcal meningitis	blindness (vision <3/60 in better eye)
Mild hearing loss due to meningococcal meningitis	mild hearing loss (20-34dB)
Mild hearing loss with ringing due to meningococcal meningitis	mild hearing loss (20-34dB) with ringing
Moderate hearing loss due to meningococcal meningitis	moderate hearing loss (35-49dB)
Moderate hearing loss with ringing due to meningococcal meningitis	moderate hearing loss (35-49dB) with ringing
Moderately severe hearing loss due to meningococcal meningitis	moderately severe hearing loss (50-64dB)
Moderately severe hearing loss with ringing due to meningococcal meningitis	moderately severe hearing loss (50-64dB) with ringing
Severe hearing loss due to meningococcal meningitis	severe hearing loss (65-79dB)
Severe hearing loss with ringing due to meningococcal meningitis	severe hearing loss (65-79dB) with ringing
Profound hearing loss due to meningococcal meningitis	profound hearing loss (80-94dB)
Profound hearing loss with ringing due to meningococcal meningitis	profound hearing loss (80-94dB) with ringing
Complete hearing loss due to meningococcal meningitis	complete hearing loss (95dB+)
Complete hearing loss with ringing due to meningococcal meningitis	complete hearing loss (95dB+) with ringing
Acute viral meningitis	severe infectious disease episode with high fever, pain and severe fatigue
Other acute bacterial meningitis	severe infectious disease episode with high fever, pain and severe fatigue
Mild behavioral problems due to other bacterial meningitis	mild behavioral problems
Mild motor impairment due to long term due to other bacterial meningitis	mild motor impairment (muscle weakness and some problems with gait or balance)
Mild motor plus cognitive impairments due to other bacterial meningitis	mild motor impairment (muscle weakness and some problems with gait or balance) plus intellectual disability (IQ 70-84)
Borderline intellectual disability due to other bacterial meningitis	intellectual disability (IQ 70-84)
Monocular distance vision loss due to other bacterial meningitis	blind in one eye (vision <3/60) but not in the other due to other bacterial meningitis infection
Mild intellectual disability due to other bacterial meningitis	intellectual disability (IQ 50-69)
Moderate motor impairment due to other bacterial meningitis	moderate motor impairment (spasticity and paresis but able to walk)
Severe motor impairment due to other bacterial meningitis	severe motor impairment (unable to walk)

Appendix Table A.7: Sequelae severity distribution descriptions

Sequela name	Severity description
Moderate motor plus cognitive impairments due to other bacterial meningitis	moderate motor (spasticity and paresis but able to walk) plus intellectual disability (IQ <70)
Severe motor plus cognitive impairments due to other bacterial meningitis	severe motor impairment (unable to walk) plus intellectual disability (IQ <70)
Epilepsy due to other meningitis	epilepsy
Blindness due to other bacterial meningitis	blindness (vision <3/60 in better eye)
Mild hearing loss due to other bacterial meningitis	mild hearing loss (20-34dB)
Mild hearing loss due with ringing to other bacterial meningitis	mild hearing loss (20-34dB) with ringing
Moderate hearing loss due to other bacterial meningitis	moderate hearing loss (35-49dB)
Moderate hearing loss with ringing due to other bacterial meningitis	moderate hearing loss (35-49dB) with ringing
Moderately severe hearing loss due to other bacterial meningitis	moderately severe hearing loss (50-64dB)
Moderately severe hearing loss with ringing due to other bacterial meningitis	moderately severe hearing loss (50-64dB) with ringing
Severe hearing loss due to other bacterial meningitis	severe hearing loss (65-79dB)
Severe hearing loss with ringing due to other bacterial meningitis	severe hearing loss (65-79dB) with ringing
Profound hearing loss due to other bacterial meningitis	profound hearing loss (80-94dB)
Profound hearing loss with ringing due to other bacterial meningitis	profound hearing loss (80-94dB) with ringing
Complete hearing loss due to other bacterial meningitis	complete hearing loss (95dB+)
Complete hearing loss with ringing due to other bacterial meningitis	complete hearing loss (95dB+) with ringing
Acute encephalitis	severe infectious disease episode with high fever, pain and severe fatigue
Mild behavioral problems due to encephalitis	mild behavioral problems
Mild motor impairment due to long term due to encephalitis	mild motor impairment (muscle weakness and some problems with gait or balance)
Mild motor plus cognitive impairments due to encephalitis	mild motor impairment (muscle weakness and some problems with gait or balance) plus intellectual disability (IQ 70-84)
Borderline intellectual disability due to encephalitis	intellectual disability (IQ 70-84)
Monocular distance vision loss due to encephalitis	blind in one eye (vision <3/60) but not in the other due to encephalitis infection
Mild intellectual disability due to encephalitis	intellectual disability (IQ 50-69)
Moderate motor impairment due to encephalitis	moderate motor impairment (spasticity and paresis but able to walk)
Severe motor impairment due to encephalitis	severe motor impairment (unable to walk)
Moderate motor plus cognitive impairments due to encephalitis	moderate motor (spasticity and paresis but able to walk) plus intellectual disability (IQ <70)
Severe motor plus cognitive impairments due to encephalitis	severe motor impairment (unable to walk) plus intellectual disability (IQ <70)

Appendix Table A.7: Sequelae severity distribution descriptions

Sequela name	Severity description
Epilepsy due to encephalitis	epilepsy
Blindness due to encephalitis	blindness (vision <3/60 in better eye)
Moderate diphtheria	moderate infectious disease episode with fever, aches and fatigue
Severe diphtheria	severe infectious disease episode with high fever, pain and severe fatigue
Severe tetanus	severe infectious disease episode with high fever, pain and severe fatigue
Mild motor impairment due to neonatal tetanus	mild motor impairment (muscle weakness and some problems with gait or balance)
Mild motor plus cognitive impairments due to neonatal tetanus	mild motor impairment (muscle weakness and some problems with gait or balance) plus intellectual disability (IQ 70-84)
Moderate motor impairment due to neonatal tetanus	moderate motor impairment (spasticity and paresis but able to walk)
Moderate motor impairment with blindness due to neonatal tetanus	moderate motor impairment (spasticity and paresis but able to walk) with blindness (vision <3/60 in better eye)
Moderate motor impairment with epilepsy due to neonatal tetanus	moderate motor impairment (spasticity and paresis but able to walk) with epilepsy
Moderate motor impairment with blindness and epilepsy due to neonatal tetanus	moderate motor impairment (spasticity and paresis but able to walk) with blindness (vision <3/60 in better eye) and epilepsy
Moderate motor plus cognitive impairment with blindness due to neonatal tetanus	moderate motor impairment (spasticity and paresis but able to walk) plus intellectual disability (IQ <70) with blindness (vision <3/60 in better eye)
Moderate motor plus cognitive impairment with epilepsy due to neonatal tetanus	moderate motor impairment (spasticity and paresis but able to walk) plus intellectual disability (IQ <70) with epilepsy
Moderate motor plus cognitive impairment with blindness and epilepsy due to neonatal tetanus	moderate motor impairment (spasticity and paresis but able to walk) plus intellectual disability (IQ <70) with blindness (vision <3/60 in better eye) and epilepsy
Severe motor impairment due to neonatal tetanus	severe motor impairment (unable to walk)
Severe motor impairment with blindness due to neonatal tetanus	severe motor impairment (unable to walk) with blindness (vision <3/60 in better eye)
Severe motor impairment with epilepsy due to neonatal tetanus	severe motor impairment (unable to walk) with epilepsy
Severe motor impairment with blindness and epilepsy due to neonatal tetanus	severe motor impairment (unable to walk) with blindness (vision <3/60 in better eye) and epilepsy
Severe motor plus cognitive impairment with blindness due to neonatal tetanus	severe motor impairment (unable to walk) plus intellectual disability (IQ <70) with blindness (vision <3/60 in better eye)
Severe motor plus cognitive impairment with epilepsy due to neonatal tetanus	severe motor impairment (unable to walk) plus intellectual disability (IQ <70) with epilepsy
Severe motor plus cognitive impairment with blindness and epilepsy due to neonatal tetanus	severe motor impairment (unable to walk) plus intellectual disability (IQ <70) with blindness (vision <3/60 in better eye) and epilepsy
Moderate measles	moderate infectious disease episode with fever, aches and fatigue
Severe measles	severe infectious disease episode with high fever, pain and severe fatigue
Asymptomatic malaria parasitemia (PfPR)	malaria parasitemia without symptoms
Mild malaria	mild infectious disease episode with low fever and mild discomfort
Moderate malaria	moderate infectious disease episode with fever, aches and fatigue
Severe malaria	severe infectious disease episode with high fever, pain and severe fatigue

Appendix Table A.7: Sequelae severity distribution descriptions

Sequela name	Severity description
Moderate motor impairment due to malaria	moderate motor impairment (spasticity and paresis but able to walk)
Moderate motor impairment with blindness due to malaria	moderate motor impairment (spasticity and paresis but able to walk) with blindness (vision <3/60 in better eye)
Moderate motor impairment with epilepsy due to malaria	moderate motor impairment (spasticity and paresis but able to walk) with blindness (vision <3/60 in better eye) and epilepsy
Moderate motor impairment with blindness and epilepsy due to malaria	moderate motor impairment (spasticity and paresis but able to walk) with blindness (vision <3/60 in better eye) and epilepsy
Moderate motor plus cognitive impairment with blindness due to malaria	moderate motor (spasticity and paresis but able to walk) plus cognitive impairment with blindness (vision <3/60 in better eye)
Moderate motor plus cognitive impairment with epilepsy due to malaria	moderate motor (spasticity and paresis but able to walk) plus cognitive impairment with epilepsy
Moderate motor plus cognitive impairment with blindness and epilepsy due to malaria	moderate motor (spasticity and paresis but able to walk) plus cognitive impairment with blindness (vision <3/60 in better eye) and epilepsy
Severe motor impairment due to malaria	severe motor impairment (unable to walk)
Severe motor impairment with blindness due to malaria	severe motor impairment (unable to walk) with blindness (vision <3/60 in better eye)
Severe motor impairment with epilepsy due to malaria	severe motor impairment (unable to walk) with epilepsy
Severe motor impairment with blindness and epilepsy due to malaria	severe motor impairment (unable to walk) with blindness (vision <3/60 in better eye) (vision <3/60 in better eye) and epilepsy
Severe motor plus cognitive impairment with blindness due to malaria	severe motor impairment (unable to walk) plus cognitive impairment with blindness (vision <3/60 in better eye)
Severe motor plus cognitive impairment with epilepsy due to malaria	severe motor impairment (unable to walk) plus cognitive impairment with epilepsy
Severe motor plus cognitive impairment with blindness and epilepsy due to malaria	severe motor impairment (unable to walk) plus cognitive impairment with blindness (vision <3/60 in better eye) and epilepsy
Mild anemia due to malaria parasitemia (PfPR)	malaria parasitemia causing minor fatigue associated with mild anemia (2011 WHO classification)
Moderate anemia due to malaria parasitemia (PfPR)	malaria parasitemia causing moderate fatigue associated with moderate anemia (2011 WHO classification)
Severe anemia due to malaria parasitemia (PfPR)	malaria parasitemia causing severe fatigue associated with severe anemia (2011 WHO classification)
Acute Chagas disease	moderate infectious disease episode with fever, aches and fatigue
Mild chronic digestive disease due to Chagas disease	abdominal pain and nausea reported as mild
Moderate chronic digestive disease due to Chagas disease	abdominal pain and nausea reported as moderate
Asymptomatic Chagas disease	person infected with Chagas, currently without symptoms
Atrial fibrillation and flutter due to Chagas disease	has periods of rapid and irregular heartbeats and occasional fainting that are attributable to infection with the <i>T. cruzi</i> parasite
Mild heart failure due to Chagas disease	shortness of breath and fatigue after moderate physical activity that goes away after a rest (NYHA Class I-II heart failure)
Moderate heart failure due to Chagas disease	shortness of breath and fatigue after minimal physical activity that goes away after a rest (NYHA Class III heart failure)
Severe heart failure due to Chagas disease	shortness of breath and fatigue even when at rest causing a person to avoid any physical activity (NYHA Class IV heart failure)
Moderate visceral leishmaniasis	moderate infectious disease episode with fever, aches and fatigue
Severe visceral leishmaniasis	severe infectious disease episode with high fever, pain and severe fatigue

Appendix Table A.7: Sequelae severity distribution descriptions

Sequela name	Severity description
Disfigurement due to African trypanosomiasis	visible physical deformity that causes others to stare and comment which causes anxiety
Severe motor plus cognitive impairments due to African trypanosomiasis	severe motor impairment (unable to walk) plus intellectual disability (IQ <70)
Mild schistosomiasis	mild infectious disease episode with low fever and mild discomfort
Mild diarrhea due to schistosomiasis	mild diarrhea causing occasional discomfort
Hematemesis due to schistosomiasis	vomits blood and feels nauseous
Hepatomegaly due to schistosomiasis	abdominal pain and nausea reported as mild
Ascites due to schistosomiasis	abdominal pain and nausea reported as moderate
Dysuria due to schistosomiasis	abdominal pain and nausea reported as mild
Bladder pathology due to schistosomiasis	abdominal pain and nausea reported as mild
Hydronephrosis due to schistosomiasis	abdominal pain and nausea reported as mild
Mild anemia due to schistosomiasis	schistosomiasis with minor fatigue associated with mild anemia (2011 WHO classification)
Moderate anemia due to schistosomiasis	schistosomiasis with moderate fatigue associated with moderate anemia (2011 WHO classification)
Severe anemia due to schistosomiasis	schistosomiasis with severe fatigue associated with severe anemia (2011 WHO classification)
Neurocysticercosis with epilepsy	epilepsy
Abdominal problems due to cystic echinococcosis	abdominal pain and nausea reported as moderate
Chronic respiratory disease due to cystic echinococcosis	cough and shortness of breath after heavy physical activity, but able to walk long distances and climb stairs
Epilepsy due to echinococcosis	epilepsy
Prevalence of detectable microfilaria due to lymphatic filariasis	lymphatic filariasis, currently without symptoms
Lymphedema due to lymphatic filariasis	swollen legs with hard and thick skin, which causes difficulty in moving around
Hydrocele due to lymphatic filariasis	hydrocele
Asymptomatic onchocerciasis	onchocerciasis, currently without symptoms
Mild skin disease due to onchocerciasis	slight visible physical deformity with sometimes pain or itch that others notice which causes some worry and discomfort
Mild skin disease without itch due to onchocerciasis	slight visible physical deformity that others notice which causes some worry and discomfort
Moderate skin disease due to onchocerciasis	visible physical deformity that is sore and itchy and causes others to stare and comment which causes anxiety
Severe skin disease due to onchocerciasis	visible physical deformity that is sore and itchy and causes others to stare and comment which causes anxiety
Severe skin disease without itch due to onchocerciasis	obvious physical deformity that makes others uncomfortable, which causes the person to avoid social contact, feel worried, sleep poorly, and think about suicide
Moderate vision impairment due to onchocerciasis	moderate vision impairment (vision <6/18 & ≥6/60 in better eye)

Appendix Table A.7: Sequelae severity distribution descriptions

Sequela name	Severity description
Severe vision impairment due to onchocerciasis	severe vision impairment (vision <6/60 & ≥3/60 in better eye)
Blindness due to onchocerciasis	blindness (vision <3/60 in better eye)
Moderate vision impairment due to trachoma	moderate vision impairment (vision <6/18 & ≥6/60 in better eye)
Severe vision impairment due to trachoma	severe vision impairment (vision <6/60 & ≥3/60 in better eye)
Blindness due to trachoma	blindness (vision <3/60 in better eye)
Moderate dengue	moderate infectious disease episode with fever, aches and fatigue
Severe dengue	severe infectious disease episode with high fever, pain and severe fatigue
Post-dengue chronic fatigue syndrome	period of extreme fatigue following an acute dengue infection
Moderate yellow fever	moderate infectious disease episode with fever, aches and fatigue
Severe yellow fever	severe infectious disease episode with high fever, pain and severe fatigue
Heavy infestation of ascariasis	cramping pain and a bloated feeling in the belly
Mild abdominopelvic problems due to ascariasis	abdominal pain and nausea reported as mild
Severe wasting due to ascariasis	weight for height (below -3z scores of the median WHO growth standards)
Asymptomatic ascariasis	ascariasis, currently without symptoms
Heavy infestation of trichuriasis	cramping pain and a bloated feeling in the belly
Mild abdominopelvic problems due to trichuriasis	abdominal pain and nausea reported as mild
Severe wasting due to trichuriasis	weight for height (below -3z scores of the median WHO growth standards)
Asymptomatic trichuriasis	trichuriasis, currently without symptoms
Heavy infestation of hookworm	cramping pain and a bloated feeling in the belly
Mild abdominopelvic problems due to hookworm disease	abdominal pain and nausea reported as mild
Severe wasting due to hookworm disease	weight for height (below -3z scores of the median WHO growth standards)
Mild anemia due to hookworm disease	hookworm disease with minor fatigue associated with mild anemia (2011 WHO classification)
Moderate anemia due to hookworm disease	hookworm disease with moderate fatigue associated with moderate anemia (2011 WHO classification)
Severe anemia due to hookworm disease	hookworm disease with severe fatigue associated with severe anemia (2011 WHO classification)
Asymptomatic hookworm disease	hookworm disease, currently without symptoms
Asymptomatic clonorchiasis	clonorchiasis, currently without symptoms
Asymptomatic fascioliasis	fascioliasis, currently without symptoms

Appendix Table A.7: Sequelae severity distribution descriptions

Sequela name	Severity description
Asymptomatic intestinal fluke infection	intestinal fluke infection, currently without symptoms
Asymptomatic opisthorchiasis	opisthorchiasis, currently without symptoms
Asymptomatic paragonimiasis	paragonimiasis, currently without symptoms
Heavy opisthorchiasis due to food-borne trematodiasis	abdominal pain and nausea reported as moderate
Heavy clonorchiasis due to food-borne trematodiasis	abdominal pain and nausea reported as moderate
Heavy intestinal fluke infection due to food-borne trematodiasis	abdominal pain and nausea reported as moderate
Heavy fascioliasis due to food-borne trematodiasis	abdominal pain and nausea reported as moderate
Heavy paragonimiasis due to food-borne trematodiasis	cough, fever and weight loss
Cerebral paragonimiasis	epilepsy due to cerebral paragonimiasis
Mild anemia due to other neglected tropical diseases	other neglected tropical diseases with minor fatigue associated with mild anemia (2011 WHO classification)
Moderate anemia due to other neglected tropical diseases	other neglected tropical diseases with moderate fatigue associated with moderate anemia (2011 WHO classification)
Severe anemia due to other neglected tropical diseases	other neglected tropical diseases with severe fatigue associated with severe anemia (2011 WHO classification)
Maternal hemorrhage (< 1L blood lost)	abdominal pain and nausea reported as moderate
Maternal hemorrhage (> 1L blood lost)	abdominal pain and nausea reported as severe
Mild anemia due to maternal hemorrhage	maternal hemorrhage causing moderate fatigue associated with moderate anemia (2011 WHO classification)
Moderate anemia due to maternal hemorrhage	moderate fatigue associated with moderate anemia (2011 WHO classification)
Severe anemia due to maternal hemorrhage	maternal hemorrhage causing severe fatigue associated with severe anemia (2011 WHO classification)
Puerperal sepsis	severe infectious disease episode with high fever, pain and severe fatigue
Other maternal infections	moderate infectious disease episode with fever, aches and fatigue
Infertility due to puerperal sepsis	absence of a live birth in a woman who desires a child and has been in a union for at least five years since her last live birth without using contraceptives
Other hypertensive disorders of pregnancy	has a chronic disease that requires medication every day and causes some worry but minimal interference with daily activities.
Severe pre-eclampsia	moderate abdominal pain and nausea, headache and mild motor and cognitive problems
Long term sequelae of severe pre-eclampsia	mild motor impairment (muscle weakness and some problems with gait or balance) plus intellectual disability (IQ 70-84)
Eclampsia	moderate abdominal pain and nausea and seizures
Long term sequelae of eclampsia	mild motor impairment (muscle weakness and some problems with gait or balance) plus intellectual disability (IQ 70-84)
Obstructed labor, acute event	abdominal pain and nausea, reported as severe
Rectovaginal fistula	abnormal opening between her vagina and rectum causing flatulence and feces to escape through the vagina

Appendix Table A.7: Sequelae severity distribution descriptions

Sequela name	Severity description
Vesicovaginal fistula	abnormal opening between the bladder and the vagina, which makes a woman unable to control urinating
Maternal abortive outcome	abdominal pain and nausea reported as moderate
Asymptomatic retinopathy of prematurity	retinopathy of prematurity without vision loss
Mild vision impairment due to retinopathy of prematurity	mild vision impairment (vision equal to or better than 6/18 and worse than 12/18)
Moderate vision impairment due to retinopathy of prematurity	moderate vision impairment (vision equal to or better than 6/60 and worse than 6/18)
Severe vision impairment due to retinopathy of prematurity	severe vision impairment (equal or better than 3/60 and worse than 6/60)
Blindness due to retinopathy of prematurity	blindness (vision <3/60 in better eye)
Mild motor impairment due to neonatal preterm birth complications <28wks	mild motor impairment (muscle weakness and some problems with gait or balance)
Mild motor plus cognitive impairments due to neonatal preterm birth complications <28wks	mild motor impairment (muscle weakness and some problems with gait or balance) plus intellectual disability (IQ 70-84) impairments
Mild motor impairment due to neonatal preterm birth complications 28-32wks	mild motor impairment (muscle weakness and some problems with gait or balance)
Mild motor plus cognitive impairments due to neonatal preterm birth complications 28-32wks	mild motor impairment (muscle weakness and some problems with gait or balance) plus intellectual disability (IQ 70-84)
Mild motor impairment due to neonatal preterm birth complications 32-36wks	mild motor impairment (muscle weakness and some problems with gait or balance)
Mild motor plus cognitive impairments due to neonatal preterm birth complications 32-36wks	mild motor impairment (muscle weakness and some problems with gait or balance) plus intellectual disability (IQ 70-84)
Moderate motor impairment due to neonatal preterm birth complications <28wks	moderate motor impairment (spasticity and paresis but able to walk)
Moderate motor impairment with blindness due to neonatal preterm birth complications <28wks	moderate motor impairment (spasticity and paresis but able to walk) with blindness (vision <3/60 in better eye)
Moderate motor impairment with epilepsy due to neonatal preterm birth complications <28wks	moderate motor impairment (spasticity and paresis but able to walk) with epilepsy
Moderate motor impairment with blindness and epilepsy due to neonatal preterm birth complications <28wks	moderate motor impairment (spasticity and paresis but able to walk) with blindness (vision <3/60 in better eye) and epilepsy
Moderate motor plus cognitive impairment with blindness due to neonatal preterm birth complications <28wks	moderate motor (spasticity and paresis but able to walk) plus cognitive impairment with blindness (vision <3/60 in better eye)
Moderate motor plus cognitive impairment with epilepsy due to neonatal preterm birth complications <28wks	moderate motor (spasticity and paresis but able to walk) plus cognitive impairment with epilepsy
Moderate motor plus cognitive impairment with blindness and epilepsy due to neonatal preterm birth complications <28wks	moderate motor (spasticity and paresis but able to walk) plus cognitive impairment with blindness (vision <3/60 in better eye) and epilepsy
Severe motor impairment due to neonatal preterm birth complications <28wks	severe motor impairment (unable to walk)
Severe motor impairment with blindness due to neonatal preterm birth complications <28wks	severe motor impairment (unable to walk) with blindness (vision <3/60 in better eye)
Severe motor impairment with epilepsy due to neonatal preterm birth complications <28wks	severe motor impairment (unable to walk) with epilepsy
Severe motor impairment with blindness and epilepsy due to neonatal preterm birth complications <28wks	severe motor impairment (unable to walk) with blindness (vision <3/60 in better eye) and epilepsy
Severe motor plus cognitive impairment with blindness due to neonatal preterm birth complications <28wks	severe motor impairment (unable to walk) plus intellectual disability (IQ <70) with blindness (vision <3/60 in better eye)
Severe motor plus cognitive impairment with epilepsy due to neonatal preterm birth complications <28wks	severe motor impairment (unable to walk) plus intellectual disability (IQ <70) with epilepsy
Severe motor plus cognitive impairment with blindness and epilepsy due to neonatal preterm birth complications <28wks	severe motor impairment (unable to walk) plus intellectual disability (IQ <70) with blindness (vision <3/60 in better eye) and epilepsy

Appendix Table A.7: Sequelae severity distribution descriptions

Sequela name	Severity description
and epilepsy due to neonatal preterm birth complications 32-36wks	severe motor impairment (unable to walk) plus intellectual disability (IQ <70) with blindness (vision <3/60 in better eye) and epilepsy
Mild motor plus cognitive impairments due to neonatal encephalopathy due to birth asphyxia and trauma	mild motor impairment (muscle weakness and some problems with gait or balance) plus intellectual disability (IQ 70-84)
Mild motor impairment due to neonatal encephalopathy due to birth asphyxia and trauma	mild motor impairment (muscle weakness and some problems with gait or balance)
Moderate motor impairment due to neonatal encephalopathy due to birth asphyxia and trauma	moderate motor impairment (spasticity and paresis but able to walk)
Moderate motor impairment with blindness due to neonatal encephalopathy due to birth asphyxia and trauma	moderate motor impairment (spasticity and paresis but able to walk) with blindness (vision <3/60 in better eye)
Moderate motor impairment with epilepsy due to neonatal encephalopathy due to birth asphyxia and trauma	moderate motor impairment (spasticity and paresis but able to walk) with epilepsy
due to neonatal encephalopathy due to birth asphyxia and trauma	moderate motor impairment (spasticity and paresis but able to walk) with blindness (vision <3/60 in better eye) and epilepsy
due to neonatal encephalopathy due to birth asphyxia and trauma	moderate motor (spasticity and paresis but able to walk) plus cognitive impairment with blindness (vision <3/60 in better eye)
due to neonatal encephalopathy due to birth asphyxia and trauma	moderate motor (spasticity and paresis but able to walk) plus cognitive impairment with epilepsy
and epilepsy due to neonatal encephalopathy due to birth asphyxia and trauma	moderate motor (spasticity and paresis but able to walk) plus cognitive impairment with blindness (vision <3/60 in better eye) and epilepsy
Severe motor impairment due to neonatal encephalopathy due to birth asphyxia and trauma	severe motor impairment (unable to walk)
Severe motor impairment with blindness due to neonatal encephalopathy due to birth asphyxia and trauma	severe motor impairment (unable to walk) with blindness (vision <3/60 in better eye)
Severe motor impairment with epilepsy due to neonatal encephalopathy due to birth asphyxia and trauma	severe motor impairment (unable to walk) with epilepsy
to neonatal encephalopathy due to birth asphyxia and trauma	severe motor impairment (unable to walk) with blindness (vision <3/60 in better eye) and epilepsy
due to neonatal encephalopathy due to birth asphyxia and trauma	severe motor impairment (unable to walk) plus intellectual disability (IQ <70) with blindness (vision <3/60 in better eye)
to neonatal encephalopathy due to birth asphyxia and trauma	severe motor impairment (unable to walk) plus intellectual disability (IQ <70) with epilepsy
and epilepsy due to neonatal encephalopathy due to birth asphyxia and trauma	severe motor impairment (unable to walk) plus intellectual disability (IQ <70) with blindness (vision <3/60 in better eye) and epilepsy
Moderate motor impairment due to hemolytic disease and other neonatal jaundice	moderate motor impairment (spasticity and paresis but able to walk)
Moderate motor impairment with blindness due to hemolytic disease and other neonatal jaundice	moderate motor impairment (spasticity and paresis but able to walk) with blindness (vision <3/60 in better eye)
Moderate motor impairment with epilepsy due to hemolytic disease and other neonatal jaundice	moderate motor impairment (spasticity and paresis but able to walk) with epilepsy
Moderate motor impairment with blindness and epilepsy due to hemolytic disease and other neonatal jaundice	moderate motor impairment (spasticity and paresis but able to walk) with blindness (vision <3/60 in better eye) and epilepsy
Moderate motor plus cognitive impairment with blindness due to hemolytic disease and other neonatal jaundice	moderate motor (spasticity and paresis but able to walk) plus cognitive impairment with blindness (vision <3/60 in better eye)
Moderate motor plus cognitive impairment with epilepsy due to hemolytic disease and other neonatal jaundice	moderate motor (spasticity and paresis but able to walk) plus cognitive impairment with epilepsy
and epilepsy due to hemolytic disease and other neonatal jaundice	moderate motor (spasticity and paresis but able to walk) plus cognitive impairment with blindness (vision <3/60 in better eye) and epilepsy
Severe motor impairment severe due to hemolytic disease and other neonatal jaundice	severe motor impairment (unable to walk)
Severe motor impairment with blindness due to hemolytic disease and other neonatal jaundice	severe motor impairment (unable to walk) with blindness (vision <3/60 in better eye)
Severe motor impairment with epilepsy due to hemolytic disease and other neonatal jaundice	severe motor impairment (unable to walk) with epilepsy

Appendix Table A.7: Sequelae severity distribution descriptions

Sequela name	Severity description
Severe motor impairment with blindness and epilepsy due to hemolytic disease and other neonatal jaundice	severe motor impairment (unable to walk) with blindness (vision <3/60 in better eye) and epilepsy
Severe motor plus cognitive impairment with blindness due to hemolytic disease and other neonatal jaundice	severe motor impairment (unable to walk) plus intellectual disability (IQ <70) with blindness (vision <3/60 in better eye)
Severe motor plus cognitive impairment with epilepsy due to hemolytic disease and other neonatal jaundice	severe motor impairment (unable to walk) plus intellectual disability (IQ <70) with epilepsy
and epilepsy due to hemolytic disease and other neonatal jaundice	severe motor impairment (unable to walk) plus intellectual disability (IQ <70) with blindness (vision <3/60 in better eye) and epilepsy
Kwashiokor due to protein-energy malnutrition	severe malnutrition with swollen abdomen and oedema
Marasmus due to protein-energy malnutrition	clinical diagnosis of severe wasting
Severe wasting due to protein-energy malnutrition	weight for height (below -3z scores of the median WHO growth standards)
Visible goiter without symptoms	visible physical deformity that causes others to stare and comment which causes anxiety
Visible goiter without heart failure due to iodine deficiency	slight visible physical deformity that others notice which causes some worry and discomfort
Visible goiter with mild heart failure due to iodine deficiency	"slight visible physical deformity that others notice which causes some worry and discomfort" and mild heart failure (MEPS analysis)
Visible goiter with moderate heart failure due to iodine deficiency	"slight visible physical deformity that others notice which causes some worry and discomfort" and moderate heart failure (MEPS analysis)
Visible goiter with severe heart failure due to iodine deficiency	"slight visible physical deformity that others notice which causes some worry and discomfort" and severe heart failure (MEPS analysis)
Visible goiter with signs and symptoms	visible goiter with signs of hypothyroidism (fatigue, weight gain and/or constipation)
Severe intellectual disability due to iodine deficiency	intellectual disability (IQ 20-34)
Profound intellectual disability due to iodine deficiency	intellectual disability (IQ <20)
Moderate vision impairment loss due to vitamin A deficiency	moderate vision impairment (vision <6/18 & ≥6/60 in better eye)
Severe vision impairment loss due to vitamin A deficiency	severe vision impairment (vision <6/60 & ≥3/60 in better eye)
Blindness due to vitamin A deficiency	blindness (vision <3/60 in better eye)
Mild iron-deficiency anemia	iron deficiency with minor fatigue associated with mild anemia (2011 WHO classification)
Moderate iron-deficiency anemia	iron deficiency with moderate fatigue associated with moderate anemia (2011 WHO classification)
Severe iron-deficiency anemia	iron deficiency with severe fatigue associated with severe anemia (2011 WHO classification)
Mild heart failure due to iron-deficiency anemia	iron deficiency with shortness of breath and fatigue after moderate physical activity that goes away after a rest (NYHA Class I-II heart failure)
Moderate heart failure due to iron-deficiency anemia	iron deficiency with shortness of breath and fatigue after minimal physical activity that goes away after a rest (NYHA Class III heart failure)
Severe heart failure due to iron-deficiency anemia	iron deficiency with shortness of breath and fatigue even when at rest causing a person to avoid any physical activity (NYHA Class IV heart failure)
Asymptomatic chlamydial infection	chlamydial infection without symptoms
Mild chlamydial infection	mild infectious disease episode with low fever and mild discomfort
Epididymo-orchitis due to chlamydial infection	swollen tender testicles and painful urination

Appendix Table A.7: Sequelae severity distribution descriptions

Sequela name	Severity description
Moderate pelvic inflammatory diseases due to chlamydial infection	abdominal pain and nausea reported as moderate
Severe pelvic inflammatory diseases due to chlamydial infection	abdominal pain and nausea reported as severe
Primary infertility due to chlamydial infection	absence of a live birth in a woman who desires a child and has been in a union for at least five years without using contraceptives
Secondary infertility due to chlamydial infection	absence of a live birth in a woman who desires a child and has been in a union for at least five years since her last live birth, without using contraceptives
Asymptomatic gonococcal infection	gonococcal infection without symptoms
Mild gonococcal infection	mild infectious disease episode with low fever and mild discomfort
Epididymo-orchitis due to gonococcal infection	swollen tender testicles and painful urination
Moderate pelvic inflammatory diseases due to gonococcal infection	abdominal pain and nausea reported as moderate
Severe pelvic inflammatory diseases due to gonococcal infection	abdominal pain and nausea reported as severe
Primary infertility due to gonococcal infection	absence of a live birth in a woman who desires a child and has been in a union for at least five years without using contraceptives
Secondary infertility due to gonococcal infection	absence of a live birth in a woman who desires a child and has been in a union for at least five years since her last live birth, without using contraceptives
Asymptomatic trichomoniasis infection	trichomoniasis infection without symptoms
Acute trichomoniasis infection	mild infectious disease episode with low fever and mild discomfort
Asymptomatic genital herpes	genital herpes, currently without symptoms
Symptomatic genital herpes	mild infectious disease episode with low fever and mild discomfort
Moderate infection due to initial genital herpes episode	moderate infectious disease episode with fever, aches and fatigue
Moderate pelvic inflammatory diseases due to other sexually transmitted diseases	abdominal pain and nausea reported as moderate
Severe pelvic inflammatory diseases due to other sexually transmitted diseases	abdominal pain and nausea reported as severe
Primary infertility due to other sexually transmitted diseases	absence of a live birth in a woman who desires a child and has been in a union for at least five years without using contraceptives
Secondary infertility due to other sexually transmitted diseases	absence of a live birth in a woman who desires a child and has been in a union for at least five years since her last live birth, without using contraceptives
Asymptomatic acute hepatitis A	acute hepatitis A infection, currently without symptoms
Mild acute hepatitis A	mild infectious disease episode with low fever and mild discomfort
Moderate acute hepatitis A	moderate infectious disease episode with fever, aches and fatigue
Severe acute hepatitis A	severe infectious disease episode with high fever, pain and severe fatigue
Asymptomatic acute hepatitis B	asymptomatic chronic hepatitis B infection
Moderate acute hepatitis B	moderate infectious disease episode with fever, aches and fatigue
Severe acute hepatitis B	severe infectious disease episode with high fever, pain and severe fatigue

Appendix Table A.7: Sequelae severity distribution descriptions

Sequela name	Severity description
Asymptomatic acute hepatitis C	asymptomatic chronic hepatitis C infection
Moderate acute hepatitis C	moderate infectious disease episode with fever, aches and fatigue
Severe acute hepatitis C	severe infectious disease episode with high fever, pain and severe fatigue
Asymptomatic acute hepatitis E	asymptomatic chronic hepatitis E infection
Moderate acute hepatitis E	moderate infectious disease episode with fever, aches and fatigue
Severe acute hepatitis E	severe infectious disease episode with high fever, pain and severe fatigue
Disfigurement level 1 due to leprosy	slight visible physical deformity that others notice which causes some worry and discomfort
Disfigurement level 2 due to leprosy	visible physical deformity that causes others to stare and comment which causes anxiety
Mild anemia due to other infectious diseases	other infectious disease with minor fatigue associated with mild anemia (2011 WHO classification)
Moderate anemia due to other infectious diseases	other infectious disease with moderate fatigue associated with moderate anemia (2011 WHO classification)
Severe anemia due to other infectious diseases	other infectious disease with severe fatigue associated with severe anemia (2011 WHO classification)
Guillain-Barré syndrome due to other infectious diseases	paralysis from the waist down
Diagnosis and primary therapy phase of esophageal cancer	pain, nausea, fatigue, weight loss and high anxiety associated with cancer diagnosis and initial treatment
Controlled phase of esophageal cancer	takes daily medication for a chronic disease with some worry but minimal interference with daily activities
Metastatic phase of esophageal cancer	metastasized cancer with severe pain, weight loss and high anxiety
Terminal phase of esophageal cancer	terminal disease with constant pain, severe weight loss, severe fatigue
Diagnosis and primary therapy phase of stomach cancer	pain, nausea, fatigue, weight loss and high anxiety associated with cancer diagnosis and initial treatment
Controlled phase of stomach cancer	takes daily medication for a chronic disease with some worry but minimal interference with daily activities
Metastatic phase of stomach cancer	metastasized cancer with severe pain, weight loss and high anxiety
Terminal phase of stomach cancer	terminal disease with constant pain, severe weight loss, severe fatigue
Diagnosis and primary therapy phase of liver cancer due to hepatitis B	pain, nausea, fatigue, weight loss and high anxiety associated with cancer diagnosis and initial treatment
Controlled phase of liver cancer due to hepatitis B	takes daily medication for a chronic disease with some worry but minimal interference with daily activities
Metastatic phase of liver cancer due to hepatitis B	metastasized cancer with severe pain, weight loss and high anxiety
Terminal phase of liver cancer due to hepatitis B	terminal disease with constant pain, severe weight loss, severe fatigue
Diagnosis and primary therapy phase of liver cancer due to hepatitis C	pain, nausea, fatigue, weight loss and high anxiety associated with cancer diagnosis and initial treatment
Controlled phase of liver cancer due to hepatitis C	takes daily medication for a chronic disease with some worry but minimal interference with daily activities
Metastatic phase of liver cancer due to hepatitis C	metastasized cancer with severe pain, weight loss and high anxiety

Appendix Table A.7: Sequelae severity distribution descriptions

Sequela name	Severity description
Terminal phase of liver cancer due to hepatitis C	terminal disease with constant pain, severe weight loss, severe fatigue
Diagnosis and primary therapy phase of liver cancer due to alcohol use	pain, nausea, fatigue, weight loss and high anxiety associated with cancer diagnosis and initial treatment
Controlled phase of liver cancer due to alcohol use	takes daily medication for a chronic disease with some worry but minimal interference with daily activities
Metastatic phase of liver cancer due to alcohol use	metastasized cancer with severe pain, weight loss and high anxiety
Terminal phase of liver cancer due to alcohol use	terminal disease with constant pain, severe weight loss, severe fatigue
Diagnosis and primary therapy phase of liver cancer due to other causes	pain, nausea, fatigue, weight loss and high anxiety associated with cancer diagnosis and initial treatment
Controlled phase of liver cancer due to other causes	takes daily medication for a chronic disease with some worry but minimal interference with daily activities
Metastatic phase of liver cancer due to other causes	metastasized cancer with severe pain, weight loss and high anxiety
Terminal phase of liver cancer due to other causes	terminal disease with constant pain, severe weight loss, severe fatigue
Diagnosis and primary therapy phase of larynx cancer	pain, nausea, fatigue, weight loss and high anxiety associated with cancer diagnosis and initial treatment
Controlled phase of larynx cancer	takes daily medication for a chronic disease with some worry but minimal interference with daily activities
Metastatic phase of larynx cancer	metastasized cancer with severe pain, weight loss and high anxiety
Terminal phase of larynx cancer	terminal disease with constant pain, severe weight loss, severe fatigue
Laryngectomy due to larynx cancer	difficulty speaking and being understood after removal larynx as cancer therapy
Diagnosis and primary therapy phase of lung, bronchus, and trachea cancer	pain, nausea, fatigue, weight loss and high anxiety associated with cancer diagnosis and initial treatment
Controlled phase of lung, bronchus, and trachea cancer	takes daily medication for a chronic disease with some worry but minimal interference with daily activities
Metastatic phase of lung, bronchus, and trachea cancer	metastasized cancer with severe pain, weight loss and high anxiety
Terminal phase of lung, bronchus, and trachea cancer	terminal disease with constant pain, severe weight loss, severe fatigue
Diagnosis and primary therapy phase of breast cancer	pain, nausea, fatigue, weight loss and high anxiety associated with cancer diagnosis and initial treatment
Controlled phase of breast cancer	takes daily medication for a chronic disease with some worry but minimal interference with daily activities
Metastatic phase of breast cancer	metastasized cancer with severe pain, weight loss and high anxiety
Terminal phase of breast cancer	terminal disease with constant pain, severe weight loss, severe fatigue
Mastectomy due to breast cancer	breast removed as cancer therapy
Diagnosis and primary therapy phase of cervical cancer	pain, nausea, fatigue, weight loss and high anxiety associated with cancer diagnosis and initial treatment
Controlled phase of cervical cancer	takes daily medication for a chronic disease with some worry but minimal interference with daily activities
Metastatic phase of cervical cancer	metastasized cancer with severe pain, weight loss and high anxiety
Terminal phase of cervical cancer	terminal disease with constant pain, severe weight loss, severe fatigue

Appendix Table A.7: Sequelae severity distribution descriptions

Sequela name	Severity description
Diagnosis and primary therapy phase of uterine cancer	pain, nausea, fatigue, weight loss and high anxiety associated with cancer diagnosis and initial treatment
Controlled phase of uterine cancer	takes daily medication for a chronic disease with some worry but minimal interference with daily activities
Metastatic phase of uterine cancer	metastasized cancer with severe pain, weight loss and high anxiety
Terminal phase of uterine cancer	terminal disease with constant pain, severe weight loss, severe fatigue
Diagnosis and primary therapy phase of prostate cancer	pain, nausea, fatigue, weight loss and high anxiety associated with cancer diagnosis and initial treatment
Controlled phase of prostate cancer	takes daily medication for a chronic disease with some worry but minimal interference with daily activities
Metastatic phase of prostate cancer	metastasized cancer with severe pain, weight loss and high anxiety
Terminal phase of prostate cancer	terminal disease with constant pain, severe weight loss, severe fatigue
Impotence due to prostate cancer	difficulty in obtaining or maintaining an erection
Incontinence due to prostate cancer	urinary incontinence
Diagnosis and primary therapy phase of colon and rectum cancers	pain, nausea, fatigue, weight loss and high anxiety associated with cancer diagnosis and initial treatment
Controlled phase of colon and rectum cancers	takes daily medication for a chronic disease with some worry but minimal interference with daily activities
Metastatic phase of colon and rectum cancers	metastasized cancer with severe pain, weight loss and high anxiety
Terminal phase of colon and rectum cancers	terminal disease with constant pain, severe weight loss, severe fatigue
Stoma due to colon and rectum cancer	stoma after surgery for colon and rectum cancer
Diagnosis and primary therapy phase of mouth cancer	pain, nausea, fatigue, weight loss and high anxiety associated with cancer diagnosis and initial treatment
Controlled phase of mouth cancer	takes daily medication for a chronic disease with some worry but minimal interference with daily activities
Metastatic phase of mouth cancer	metastasized cancer with severe pain, weight loss and high anxiety
Terminal phase of mouth cancer	terminal disease with constant pain, severe weight loss, severe fatigue
Diagnosis and primary therapy phase of nasopharynx cancer	pain, nausea, fatigue, weight loss and high anxiety associated with cancer diagnosis and initial treatment
Controlled phase of nasopharynx cancer	takes daily medication for a chronic disease with some worry but minimal interference with daily activities
Metastatic phase of nasopharynx cancer	metastasized cancer with severe pain, weight loss and high anxiety
Terminal phase of nasopharynx cancer	terminal disease with constant pain, severe weight loss, severe fatigue
Diagnosis and primary therapy phase of other pharynx cancer	pain, nausea, fatigue, weight loss and high anxiety associated with cancer diagnosis and initial treatment
Controlled phase of other pharynx cancer	takes daily medication for a chronic disease with some worry but minimal interference with daily activities
Metastatic phase of other pharynx cancer	metastasized cancer with severe pain, weight loss and high anxiety
Terminal phase of other pharynx cancer	terminal disease with constant pain, severe weight loss, severe fatigue

Appendix Table A.7: Sequelae severity distribution descriptions

Sequela name	Severity description
Diagnosis and primary therapy phase of gallbladder and biliary tract cancer	pain, nausea, fatigue, weight loss and high anxiety associated with cancer diagnosis and initial treatment
Controlled phase of gallbladder and biliary tract cancer	takes daily medication for a chronic disease with some worry but minimal interference with daily activities
Metastatic phase of gallbladder and biliary tract cancer	metastasized cancer with severe pain, weight loss and high anxiety
Terminal phase of gallbladder and biliary tract cancer	terminal disease with constant pain, severe weight loss, severe fatigue
Diagnosis and primary therapy phase of pancreatic cancer	pain, nausea, fatigue, weight loss and high anxiety associated with cancer diagnosis and initial treatment
Controlled phase of pancreatic cancer	takes daily medication for a chronic disease with some worry but minimal interference with daily activities
Metastatic phase of pancreatic cancer	metastasized cancer with severe pain, weight loss and high anxiety
Terminal phase of pancreatic cancer	terminal disease with constant pain, severe weight loss, severe fatigue
Diagnosis and primary therapy phase of malignant skin melanoma	pain, nausea, fatigue, weight loss and high anxiety associated with cancer diagnosis and initial treatment
Controlled phase of malignant skin melanoma	takes daily medication for a chronic disease with some worry but minimal interference with daily activities
Metastatic phase of malignant skin melanoma	metastasized cancer with severe pain, weight loss and high anxiety
Terminal phase of malignant skin melanoma	terminal disease with constant pain, severe weight loss, severe fatigue
Diagnosis and primary therapy phase of cutaneous squamous cell carcinoma	pain, nausea, fatigue, weight loss and high anxiety associated with cancer diagnosis and initial treatment
Control phase of cutaneous squamous cell carcinoma	takes daily medication for a chronic disease with some worry but minimal interference with daily activities
Metastatic phase of cutaneous squamous cell carcinoma	metastasized cancer with severe pain, weight loss and high anxiety
Terminal phase of cutaneous squamous cell carcinoma	terminal disease with constant pain, severe weight loss, severe fatigue
Disfigurement due to basal cell carcinoma	slight visible physical deformity that others notice which causes some worry and discomfort
Diagnosis and primary therapy phase of ovarian cancer	pain, nausea, fatigue, weight loss and high anxiety associated with cancer diagnosis and initial treatment
Controlled phase of ovarian cancer	takes daily medication for a chronic disease with some worry but minimal interference with daily activities
Metastatic phase of ovarian cancer	metastasized cancer with severe pain, weight loss and high anxiety
Terminal phase of ovarian cancer	terminal disease with constant pain, severe weight loss, severe fatigue
Diagnosis and primary therapy phase of testicular cancer	pain, nausea, fatigue, weight loss and high anxiety associated with cancer diagnosis and initial treatment
Controlled phase of testicular cancer	takes daily medication for a chronic disease with some worry but minimal interference with daily activities
Metastatic phase of testicular cancer	metastasized cancer with severe pain, weight loss and high anxiety
Terminal phase of testicular cancer	terminal disease with constant pain, severe weight loss, severe fatigue
Diagnosis and primary therapy phase of kidney cancer	pain, nausea, fatigue, weight loss and high anxiety associated with cancer diagnosis and initial treatment
Controlled phase of kidney cancer	takes daily medication for a chronic disease with some worry but minimal interference with daily activities

Appendix Table A.7: Sequelae severity distribution descriptions

Sequela name	Severity description
Metastatic phase of kidney cancer	metastasized cancer with severe pain, weight loss and high anxiety
Terminal phase of kidney cancer	terminal disease with constant pain, severe weight loss, severe fatigue
Diagnosis and primary therapy phase of bladder cancer	pain, nausea, fatigue, weight loss and high anxiety associated with cancer diagnosis and initial treatment
Controlled phase of bladder cancer	takes daily medication for a chronic disease with some worry but minimal interference with daily activities
Metastatic phase of bladder cancer	metastasized cancer with severe pain, weight loss and high anxiety
Terminal phase of bladder cancer	terminal disease with constant pain, severe weight loss, severe fatigue
Urinary incontinence due to bladder cancer	urinary incontinence
Diagnosis and primary therapy phase of brain and nervous system cancers	pain, nausea, fatigue, weight loss and high anxiety associated with cancer diagnosis and initial treatment
Controlled phase of brain and nervous system cancers	takes daily medication for a chronic disease with some worry but minimal interference with daily activities
Metastatic phase of brain and nervous system cancers	metastasized cancer with severe pain, weight loss and high anxiety
Terminal phase of brain and nervous system cancers	terminal disease with constant pain, severe weight loss, severe fatigue
Diagnosis and primary therapy phase of thyroid cancer	pain, nausea, fatigue, weight loss and high anxiety associated with cancer diagnosis and initial treatment
Controlled phase of thyroid cancer	takes daily medication for a chronic disease with some worry but minimal interference with daily activities
Metastatic phase of thyroid cancer	metastasized cancer with severe pain, weight loss and high anxiety
Terminal phase of thyroid cancer	terminal disease with constant pain, severe weight loss, severe fatigue
Diagnosis and primary therapy phase of mesothelioma	pain, nausea, fatigue, weight loss and high anxiety associated with cancer diagnosis and initial treatment
Controlled phase of mesothelioma	takes daily medication for a chronic disease with some worry but minimal interference with daily activities
Metastatic phase of mesothelioma	metastasized cancer with severe pain, weight loss and high anxiety
Terminal phase of mesothelioma	terminal disease with constant pain, severe weight loss, severe fatigue
Diagnosis and primary therapy phase of Hodgkin disease	pain, nausea, fatigue, weight loss and high anxiety associated with cancer diagnosis and initial treatment
Controlled phase of Hodgkin disease	takes daily medication for a chronic disease with some worry but minimal interference with daily activities
Metastatic phase of Hodgkin disease	metastasized cancer with severe pain, weight loss and high anxiety
Terminal phase of Hodgkin disease	terminal disease with constant pain, severe weight loss, severe fatigue
Diagnosis and primary therapy phase of non-Hodgkin lymphoma	pain, nausea, fatigue, weight loss and high anxiety associated with cancer diagnosis and initial treatment
Controlled phase of non-Hodgkin lymphoma	takes daily medication for a chronic disease with some worry but minimal interference with daily activities
Metastatic phase of non-Hodgkin lymphoma	metastasized cancer with severe pain, weight loss and high anxiety
Terminal phase of non-Hodgkin lymphoma	terminal disease with constant pain, severe weight loss, severe fatigue

Appendix Table A.7: Sequelae severity distribution descriptions

Sequela name	Severity description
Diagnosis and primary therapy phase of multiple myeloma	pain, nausea, fatigue, weight loss and high anxiety associated with cancer diagnosis and initial treatment
Controlled phase of multiple myeloma	takes daily medication for a chronic disease with some worry but minimal interference with daily activities
Metastatic phase of multiple myeloma	metastasized cancer with severe pain, weight loss and high anxiety
Terminal phase of multiple myeloma	terminal disease with constant pain, severe weight loss, severe fatigue
Diagnosis and primary therapy phase of leukemia	pain, nausea, fatigue, weight loss and high anxiety associated with cancer diagnosis and initial treatment
Controlled phase of leukemia	takes daily medication for a chronic disease with some worry but minimal interference with daily activities
Metastatic phase of leukemia	metastasized cancer with severe pain, weight loss and high anxiety
Terminal phase of leukemia	terminal disease with constant pain, severe weight loss, severe fatigue
Diagnosis and primary therapy phase of other neoplasms	pain, nausea, fatigue, weight loss and high anxiety associated with cancer diagnosis and initial treatment
Controlled phase of other neoplasms	takes daily medication for a chronic disease with some worry but minimal interference with daily activities
Metastatic phase of other neoplasms	metastasized cancer with severe pain, weight loss and high anxiety
Terminal phase of other neoplasms	terminal disease with constant pain, severe weight loss, severe fatigue
Rheumatic heart disease, without heart failure	takes daily medication for a chronic disease with some worry but minimal interference with daily activities
Mild heart failure due to rheumatic heart disease	shortness of breath and fatigue after moderate physical activity that goes away after a rest (NYHA Class I-II heart failure)
Moderate heart failure due to rheumatic heart disease	shortness of breath and fatigue after minimal physical activity that goes away after a rest (NYHA Class III heart failure)
Severe heart failure due to rheumatic heart disease	shortness of breath and fatigue even when at rest causing a person to avoid any physical activity (NYHA Class IV heart failure)
Asymptomatic ischemic heart disease following myocardial infarction	Ischemic heart disease, currently without symptoms
Acute myocardial infarction first 2 days	severe chest pain, nausea, shortness of breath, and high anxiety first two days after a heart attack
Acute myocardial infarction 3 to 28 days	shortness of breath. Fatigue and some anxiety at day 3 to day 28 after a heart attack
Asymptomatic angina due to ischemic heart disease	angina, currently without symptoms
Mild angina due to ischemic heart disease	mild chest pain after strenuous physical activity that goes away after a brief rest
Moderate angina due to ischemic heart disease	chest pain after moderate physical activity that goes away after a brief rest
Severe angina due to ischemic heart disease	chest pain after minimal physical activity that goes away after a brief rest; the person avoids most physical activities because of the pain
Mild heart failure due to ischemic heart disease	shortness of breath and fatigue after moderate physical activity that goes away after a rest (NYHA Class I-II heart failure)
Moderate heart failure due to ischemic heart disease	shortness of breath and fatigue after minimal physical activity that goes away after a rest (NYHA Class III heart failure)
Severe heart failure due to ischemic heart disease	shortness of breath and fatigue even when at rest causing a person to avoid any physical activity (NYHA Class IV heart failure)
Asymptomatic chronic ischemic stroke	ischemic stroke, currently without symptoms

Appendix Table A.7: Sequelae severity distribution descriptions

Sequela name	Severity description
Chronic ischemic stroke severity level 1	first (least severe) of five levels of motor and cognitive impairment after stroke
Chronic ischemic stroke severity level 2	second of five levels of motor and cognitive impairment after stroke
Chronic ischemic stroke severity level 3	third of five levels of motor and cognitive impairment after stroke
Chronic ischemic stroke severity level 4	fourth of five levels of motor and cognitive impairment after stroke
Chronic ischemic stroke severity level 5	fifth and most severe of five levels of motor and cognitive impairment after stroke
Acute ischemic stroke severity level 1	first (least severe) of five levels of motor and cognitive impairment after stroke
Acute ischemic stroke severity level 2	second of five levels of motor and cognitive impairment after stroke
Acute ischemic stroke severity level 3	third of five levels of motor and cognitive impairment after stroke
Acute ischemic stroke severity level 4	fourth of five levels of motor and cognitive impairment after stroke
Acute ischemic stroke severity level 5	fifth and most severe of five levels of motor and cognitive impairment after stroke
Asymptomatic chronic hemorrhagic stroke	hemorrhagic stroke, currently without symptoms
Chronic hemorrhagic stroke severity level 1	first (least severe) of five levels of motor and cognitive impairment after stroke
Chronic hemorrhagic stroke severity level 2	second of five levels of motor and cognitive impairment after stroke
Chronic hemorrhagic stroke severity level 3	third of five levels of motor and cognitive impairment after stroke
Chronic hemorrhagic stroke severity level 4	fourth of five levels of motor and cognitive impairment after stroke
Chronic hemorrhagic stroke severity level 5	fifth and most severe of five levels of motor and cognitive impairment after stroke
Acute hemorrhagic stroke severity level 1	first (least severe) of five levels of motor and cognitive impairment after stroke
Acute hemorrhagic stroke severity level 2	second of five levels of motor and cognitive impairment after stroke
Acute hemorrhagic stroke severity level 3	third of five levels of motor and cognitive impairment after stroke
Acute hemorrhagic stroke severity level 4	fourth of five levels of motor and cognitive impairment after stroke
Acute hemorrhagic stroke severity level 5	fifth and most severe of five levels of motor and cognitive impairment after stroke
Mild heart failure due to hypertensive heart disease	shortness of breath and fatigue after moderate physical activity that goes away after a rest (NYHA Class I-II heart failure)
Moderate heart failure due to hypertensive heart disease	shortness of breath and fatigue after minimal physical activity that goes away after a rest (NYHA Class III heart failure)
Severe heart failure due to hypertensive heart disease	shortness of breath and fatigue even when at rest causing a person to avoid any physical activity (NYHA Class IV heart failure)
Acute myocarditis	moderate infectious disease episode with fever, aches and fatigue
Mild heart failure due to cardiomyopathy and myocarditis	shortness of breath and fatigue after moderate physical activity that goes away after a rest (NYHA Class I-II heart failure)
Moderate heart failure due to cardiomyopathy and myocarditis	shortness of breath and fatigue after minimal physical activity that goes away after a rest (NYHA Class III heart failure)

Appendix Table A.7: Sequelae severity distribution descriptions

Sequela name	Severity description
Severe heart failure due to cardiomyopathy and myocarditis	shortness of breath and fatigue even when at rest causing a person to avoid any physical activity (NYHA Class IV heart failure)
Asymptomatic atrial fibrillation and flutter	atrial fibrillation, currently without symptoms
Symptomatic atrial fibrillation and flutter	has periods of rapid and irregular heartbeats and occasional fainting
Asymptomatic peripheral vascular disease	Ankle brachial pressure index of less than 0,9 but no symptoms of claudication
Symptomatic claudication due to peripheral vascular disease	cramping pains in the legs after walking a medium distance that goes away after a short rest
Moderate endocarditis	moderate infectious disease episode with fever, aches and fatigue
Severe endocarditis	severe infectious disease episode with high fever, pain and severe fatigue
Mild heart failure due to endocarditis	shortness of breath and fatigue after moderate physical activity that goes away after a rest (NYHA Class I-II heart failure)
Moderate heart failure due to endocarditis	shortness of breath and fatigue after minimal physical activity that goes away after a rest (NYHA Class III heart failure)
Severe heart failure due to endocarditis	shortness of breath and fatigue even when at rest causing a person to avoid any physical activity (NYHA Class IV heart failure)
Mild heart failure due to other cardiovascular diseases	shortness of breath and fatigue after moderate physical activity that goes away after a rest (NYHA Class I-II heart failure)
Moderate heart failure due to other cardiovascular diseases	shortness of breath and fatigue after minimal physical activity that goes away after a rest (NYHA Class III heart failure)
Severe heart failure due to other cardiovascular diseases	shortness of breath and fatigue even when at rest causing a person to avoid any physical activity (NYHA Class IV heart failure)
Asymptomatic other cardiovascular diseases	other cardiovascular disease, currently without symptoms
Mild other cardiovascular diseases	shortness of breath and fatigue after moderate physical activity that goes away after a rest (NYHA Class I-II heart failure)
Moderate other cardiovascular diseases	shortness of breath and fatigue after minimal physical activity that goes away after a rest (NYHA Class III heart failure)
Severe other cardiovascular diseases	shortness of breath and fatigue even when at rest causing a person to avoid any physical activity (NYHA Class IV heart failure)
Asymptomatic chronic obstructive pulmonary disease	chronic obstructive pulmonary disease, currently without symptoms
Mild chronic obstructive pulmonary disease	cough and shortness of breath after heavy physical activity, but able to walk long distances and climb stairs
Moderate chronic obstructive pulmonary disease	cough, wheezing and shortness of breath after light physical activity; able to walk only short distances or climb only a few stairs.
Severe chronic obstructive pulmonary disease without heart failure	cough, wheezing and shortness of breath all the time; great difficulty walking even short distances or climbing any stairs, feels tired when at rest, and is anxious.
Mild heart failure due to severe chronic obstructive pulmonary disease	cough, wheezing, constant shortness of breath, great difficulty walking even short distances, fatigue and anxiety
Moderate heart failure due to severe chronic obstructive pulmonary disease	cough, wheezing, constant shortness of breath, great difficulty walking even short distances, feels tired even when at rest and has anxiety
Severe heart failure due to severe chronic obstructive pulmonary disease	cough, wheezing, constant shortness of breath, great difficulty walking even short distances, feels tired even when at rest and avoids any physical activity, and high anxiety
Asymptomatic silicosis	silicosis, currently without symptoms
Mild silicosis	cough and shortness of breath after heavy physical activity, but able to walk long distances and climb stairs
Moderate silicosis	cough, wheezing and shortness of breath after light physical activity; able to walk only short distances or climb only a few stairs.

Appendix Table A.7: Sequelae severity distribution descriptions

Sequela name	Severity description
Severe silicosis without heart failure	cough, wheezing and shortness of breath all the time; great difficulty walking even short distances or climbing any stairs, feels tired when at rest, and is anxious.
Mild heart failure due to severe silicosis	cough, wheezing, constant shortness of breath, great difficulty walking even short distances, fatigue and anxiety
Moderate heart failure due to severe silicosis	cough, wheezing, constant shortness of breath, great difficulty walking even short distances, feels tired even when at rest and has anxiety
Severe heart failure due to severe silicosis	cough, wheezing, constant shortness of breath, great difficulty walking even short distances, feels tired even when at rest and avoids any physical activity, and high anxiety
Asymptomatic asbestosis	asbestosis, currently without symptoms
Mild asbestosis	cough and shortness of breath after heavy physical activity, but able to walk long distances and climb stairs
Moderate asbestosis	cough, wheezing and shortness of breath after light physical activity; able to walk only short distances or climb only a few stairs.
Severe asbestosis without heart failure	cough, wheezing and shortness of breath all the time; great difficulty walking even short distances or climbing any stairs, feels tired when at rest, and is anxious.
Mild heart failure due to severe asbestosis	cough, wheezing, constant shortness of breath, great difficulty walking even short distances, fatigue and anxiety
Moderate heart failure due to severe asbestosis	cough, wheezing, constant shortness of breath, great difficulty walking even short distances, feels tired even when at rest and has anxiety
Severe heart failure due to severe asbestosis	cough, wheezing, constant shortness of breath, great difficulty walking even short distances, feels tired even when at rest and avoids any physical activity, and high anxiety
Asymptomatic coal workers pneumoconiosis	coal workers pneumoconiosis, currently without symptoms
Mild coal workers pneumoconiosis	cough and shortness of breath after heavy physical activity, but able to walk long distances and climb stairs
Moderate coal workers pneumoconiosis	cough, wheezing and shortness of breath after light physical activity; able to walk only short distances or climb only a few stairs.
Severe coal workers pneumoconiosis without heart failure	cough, wheezing and shortness of breath all the time; great difficulty walking even short distances or climbing any stairs, feels tired when at rest, and is anxious.
Mild heart failure due to severe coal workers pneumoconiosis	cough, wheezing, constant shortness of breath, great difficulty walking even short distances, fatigue and anxiety
Moderate heart failure due to severe coal workers pneumoconiosis	cough, wheezing, constant shortness of breath, great difficulty walking even short distances, feels tired even when at rest and has anxiety
Severe heart failure due to severe coal workers pneumoconiosis	cough, wheezing, constant shortness of breath, great difficulty walking even short distances, feels tired even when at rest and avoids any physical activity, and high anxiety
Asymptomatic other pneumoconiosis	other pneumoconiosis, currently without symptoms
Mild other pneumoconiosis	cough and shortness of breath after heavy physical activity, but able to walk long distances and climb stairs
Moderate other pneumoconiosis	cough, wheezing and shortness of breath after light physical activity; able to walk only short distances or climb only a few stairs.
Severe other pneumoconiosis without heart failure	cough, wheezing and shortness of breath all the time; great difficulty walking even short distances or climbing any stairs, feels tired when at rest, and is anxious.
Mild heart failure due to severe other pneumoconiosis	cough, wheezing, constant shortness of breath, great difficulty walking even short distances, fatigue and anxiety
Moderate heart failure due to severe other pneumoconiosis	cough, wheezing, constant shortness of breath, great difficulty walking even short distances, feels tired even when at rest and has anxiety
Severe heart failure due to severe other pneumoconiosis	cough, wheezing, constant shortness of breath, great difficulty walking even short distances, feels tired even when at rest and avoids any physical activity, and high anxiety
Asymptomatic asthma	asthma, currently without symptoms
Controlled asthma	asthmatic wheezing and cough once a month, which does not cause difficulty with daily activities.

Appendix Table A.7: Sequelae severity distribution descriptions

Sequela name	Severity description
Partially controlled asthma	wheezing and cough once a week due to partially controlled asthma, which causes some difficulty with daily activities
Uncontrolled asthma	wheezing, cough and shortness of breath more than twice a week which causes difficulty with daily activities and sometimes wakes the person at night.
Asymptomatic interstitial lung disease and pulmonary sarcoidosis	interstitial lung disease and pulmonary sarcoidosis, currently without symptoms
Mild interstitial lung disease and pulmonary sarcoidosis	cough and shortness of breath after heavy physical activity, but able to walk long distances and climb stairs
Moderate interstitial lung disease and pulmonary sarcoidosis	cough, wheezing and shortness of breath after light physical activity; able to walk only short distances or climb only a few stairs.
Severe interstitial lung disease and pulmonary sarcoidosis without heart failure	cough, wheezing and shortness of breath all the time; great difficulty walking even short distances or climbing any stairs, feels tired when at rest, and is anxious.
Mild heart failure due to severe interstitial lung disease and pulmonary sarcoidosis	cough, wheezing, constant shortness of breath, great difficulty walking even short distances, fatigue and anxiety
Moderate heart failure due to severe interstitial lung disease and pulmonary sarcoidosis	cough, wheezing, constant shortness of breath, great difficulty walking even short distances, feels tired even when at rest and has anxiety
Severe heart failure due to severe interstitial lung disease and pulmonary sarcoidosis	cough, wheezing, constant shortness of breath, great difficulty walking even short distances, feels tired even when at rest and avoids any physical activity, and high anxiety
Peptic ulcer disease, symptomatic episodes, with mild anemia (2011 WHO classification)	abdominal pain reported as mild and minor fatigue associated with mild anemia (2011 WHO classification)
Peptic ulcer disease, symptomatic episodes, with moderate anemia (2011 WHO classification)	abdominal pain reported as moderate and moderate fatigue associated with moderate anemia (2011 WHO classification)
Peptic ulcer disease, symptomatic episodes, with severe anemia (2011 WHO classification)	abdominal pain reported as moderate and severe fatigue associated with severe anemia (2011 WHO classification)
Peptic ulcer disease, symptomatic episodes	abdominal pain and nausea reported as moderate
Gastritis and duodenitis, symptomatic episodes, with mild anemia (2011 WHO classification)	abdominal pain reported as mild and minor fatigue associated with mild anemia (2011 WHO classification)
Gastritis and duodenitis, symptomatic episodes, with moderate anemia (2011 WHO classification)	abdominal pain reported as moderate and moderate fatigue associated with moderate anemia (2011 WHO classification)
Gastritis and duodenitis, symptomatic episodes, with severe anemia (2011 WHO classification)	abdominal pain reported as moderate and severe fatigue associated with severe anemia (2011 WHO classification)
Gastritis and duodenitis, symptomatic episodes	abdominal pain and nausea reported as moderate
Paralytic ileus and intestinal obstruction	abdominal pain and nausea reported as severe
Ulcerative colitis	chronic episodic abdominal pain with diarrhea and fatigue
Crohn's disease	chronic episodic abdominal pain with diarrhea and fatigue
Mild Alzheimer disease and other dementias	Clinical Dementia Rating (CDR) 21-25
Moderate Alzheimer disease and other dementias	Clinical Dementia Rating (CDR) 11-20
Severe Alzheimer disease and other dementias	Clinical Dementia Rating (CDR) <10
Mild Parkinson disease	Hoehn and Yahr score ≤ 2
Moderate Parkinson disease	Hoehn and Yahr score 2.5-4
Severe Parkinson disease	Hoehn and Yahr score >4
Seizure-free, treated epilepsy	takes daily medication for a chronic disease with some worry but minimal interference with daily activities

Appendix Table A.7: Sequelae severity distribution descriptions

Sequela name	Severity description
Less severe epilepsy	1-11 epileptic seizures in past year
Severe epilepsy	epileptic seizures more than once a month
Mild multiple sclerosis	Expanded Disability Status Scale (EDSS) 0-3
Moderate multiple sclerosis	Expanded Disability Status Scale (EDSS) 3.5-6
Severe multiple sclerosis	Expanded Disability Status Scale (EDSS) 6.5-9
Asymptomatic migraine	migraine, currently without symptoms
Symptomatic migraine	severe, throbbing head pain, light sensitivity and nausea
Asymptomatic tension-type headache	tension-type headache, currently without symptoms
Symptomatic tension-type headache	moderate headache that also affects the neck
Asymptomatic medication overuse headache	medication overuse headache, currently without symptoms
Symptomatic medication overuse headache	chronic headache (>15 days per month for at least three months) worsened by medication intake (at least every other day) and improving after stopping medication
Guillain-Barré syndrome due to other neurological disorders	paralysis from the waist down
Schizophrenia residual state	a residual state of predominantly negative symptoms such as flat affect, loss of interest, and emotional withdrawal as defined in DSM-IV
Schizophrenia acute state	an acute state of predominantly positive symptoms such as delusions, hallucinations, and thought disorder as defined in DSM-IV
Asymptomatic alcohol dependence	alcohol dependence, currently without symptoms
Very mild alcohol dependence	very mild alcohol dependence (MEPS, NESARC and NSMHWB analysis)
Mild alcohol dependence	mild alcohol dependence (MEPS, NESARC and NSMHWB analysis)
Moderate alcohol dependence	moderate alcohol dependence (MEPS, NESARC and NSMHWB analysis)
Severe alcohol dependence	severe alcohol dependence (MEPS, NESARC and NSMHWB analysis)
Asymptomatic fetal alcohol syndrome	fetal alcohol syndrome with IQ greater than 85
Mild fetal alcohol syndrome	fetal alcohol syndrome with intellectual disability (IQ 70-85)
Moderate fetal alcohol syndrome	fetal alcohol syndrome with intellectual disability (IQ 50-70)
Severe fetal alcohol syndrome	fetal alcohol syndrome with intellectual disability (IQ <50)
Asymptomatic opioid dependence	opioid dependence, currently without symptoms (NESARC analysis)
Mild opioid dependence	mild opioid dependence (NESARC analysis)
Severe opioid dependence	opioid dependence with hallucinations and disturbed mood causing difficulty in daily functioning
Asymptomatic cocaine dependence	cocaine dependence, currently without symptoms (NESARC analysis)

Appendix Table A.7: Sequelae severity distribution descriptions

Sequela name	Severity description
Mild cocaine dependence	mild cocaine dependence (NESARC analysis)
Severe cocaine dependence	cocaine dependence with hallucinations and disturbed mood causing difficulty in daily functioning
Asymptomatic amphetamine dependence	amphetamine dependence, currently without symptoms (NESARC analysis)
Mild amphetamine dependence	mild amphetamine dependence (NESARC analysis)
Severe amphetamine dependence	amphetamine dependence with hallucinations and disturbed mood causing difficulty in daily functioning
Asymptomatic cannabis dependence	cannabis dependence, currently without symptoms
Mild cannabis dependence	mild cannabis dependence (NESARC analysis)
Severe cannabis dependence	severe cannabis dependence (NESARC analysis)
Major depressive disorder, currently without symptoms	major depressive disorder, currently without symptoms
Mild major depressive disorder	mild major depressive disorder (MEPS, NESARC and NSMHWB analyses)
Moderate major depressive disorder	moderate major depressive disorder (MEPS, NESARC and NSMHWB analyses)
Severe major depressive disorder	severe major depressive disorder (MEPS, NESARC and NSMHWB analyses)
Dysthymia, currently without symptoms	dysthymia, currently without symptoms
Symptomatic dysthymia	dysthymia, currently with symptoms (MEPS, NESARC and NSMHWB analyses)
Bipolar disorder residual state	residual state of bipolar disorder as defined in DSM-IV or ICD-10 which may include sub-threshold depressive or manic symptoms
Bipolar disorder depressive state	DSM-IV or ICD-10 defined episode of mania
Bipolar disorder manic state	DSM-IV or ICD-10 defined episode of depression
Anxiety disorders, currently without symptoms	anxiety disorder, currently without symptoms
Mild anxiety disorders	mild anxiety disorders (MEPS, NESARC and NSMHWB analyses)
Moderate anxiety disorders	moderate anxiety disorders (MEPS, NESARC and NSMHWB analyses)
Severe anxiety disorders	severe anxiety disorders (MEPS, NESARC and NSMHWB analyses)
Attention-deficit/hyperactivity disorder, currently without symptoms	Attention-Deficit Hyperactivity Disorder, currently without symptoms
Symptomatic attention-deficit/hyperactivity disorder	hyperactive and difficulty concentrating, remembering things, and completing tasks
Conduct disorder, currently without symptoms	conduct disorder, currently without symptoms
Symptomatic conduct disorder	behavior problems, which are sometimes violent, irritation and difficulty interacting with other people
Borderline idiopathic intellectual disability	intellectual disability (IQ 70-84)
Mild idiopathic intellectual disability	intellectual disability (IQ 50-69)

Appendix Table A.7: Sequelae severity distribution descriptions

Sequela name	Severity description
Moderate idiopathic intellectual disability	moderate idiopathic intellectual disability (IQ 35-49)
Severe idiopathic intellectual disability	intellectual disability (IQ 20-34)
Profound idiopathic intellectual disability	intellectual disability (IQ <20)
Other mental disorders, currently without symptoms	other mental disorders, currently without symptoms
Mild other mental disorders	mild other mental disorders (NESARC and NSMHWB analysis)
Moderate other mental disorders	moderately severe other mental disorders (NESARC and NSMHWB analysis)
Severe other mental disorders	severe other mental disorders (NESARC and NSMHWB analysis)
Uncomplicated diabetes mellitus	takes daily medication for a chronic disease with some worry but minimal interference with daily activities
Diabetic neuropathy	pain, tingling and numbness in the arms, legs, hands and feet due to diabetes
Diabetic foot due to neuropathy	sore on the foot due to diabetes that is swollen and causes some difficulty in walking
Diabetic neuropathy and amputation with treatment	amputation with an artificial leg
Diabetic neuropathy and amputation without treatment	amputation without an artificial leg
Moderate vision impairment due to diabetes mellitus	moderate vision impairment (vision <6/18 & ≥6/60 in better eye)
Severe vision impairment due to diabetes mellitus	severe vision impairment (vision <6/60 & ≥3/60 in better eye)
Blindness due to diabetes mellitus	blindness (vision <3/60 in better eye)
Stage III chronic kidney disease without anemia due to diabetes mellitus	stage III chronic kidney disease due to diabetes mellitus, currently without symptoms
Stage III chronic kidney disease and mild anemia due to diabetes mellitus	minor fatigue associated with mild anemia (2011 WHO classification) (2011 WHO classification)
Stage III chronic kidney disease and moderate anemia due to diabetes mellitus	moderate fatigue associated with moderate anemia (2011 WHO classification)
Stage III chronic kidney disease and severe anemia due to diabetes mellitus	severe fatigue associated with severe anemia (2011 WHO classification)
Stage IV chronic kidney disease without anemia due to diabetes mellitus	fatigue, nausea, reduced appetite and difficulty sleeping
Stage IV chronic kidney disease and mild anemia due to diabetes mellitus	minor fatigue associated with mild anemia (2011 WHO classification)
Stage IV chronic kidney disease and moderate anemia due to diabetes mellitus	moderate fatigue associated with moderate anemia (2011 WHO classification)
Stage IV chronic kidney disease and severe anemia due to diabetes mellitus	severe fatigue associated with severe anemia (2011 WHO classification)
Stage V chronic kidney disease untreated due to diabetes mellitus	terminal disease with constant pain, severe weight loss, severe fatigue
End-stage renal disease after transplant due to diabetes mellitus	occasional fatigue or mood problems after transplant
End-stage renal disease on dialysis due to diabetes mellitus	fatigue, pains and shortness of breath in person undergoing intensive dialysis medical care every other day
Stage III chronic kidney disease without anemia due to hypertension	stage III chronic kidney disease due to hypertension, currently without symptoms

Appendix Table A.7: Sequelae severity distribution descriptions

Sequela name	Severity description
Stage III chronic kidney disease and mild anemia due to hypertension	minor fatigue associated with mild anemia (2011 WHO classification)
Stage III chronic kidney disease and moderate anemia due to hypertension	moderate fatigue associated with moderate anemia (2011 WHO classification)
Stage III chronic kidney disease and severe anemia due to hypertension	severe fatigue associated with severe anemia (2011 WHO classification)
Stage IV chronic kidney disease without anemia due to hypertension	fatigue, nausea, reduced appetite and difficulty sleeping
Stage IV chronic kidney disease and mild anemia due to hypertension	minor fatigue associated with mild anemia (2011 WHO classification)
Stage IV chronic kidney disease and moderate anemia due to hypertension	moderate fatigue associated with moderate anemia (2011 WHO classification)
Stage IV chronic kidney disease and severe anemia due to hypertension	severe fatigue associated with severe anemia (2011 WHO classification)
Stage V chronic kidney disease untreated due to hypertension	terminal disease with constant pain, severe weight loss, severe fatigue
End-stage renal disease after transplant due to hypertension	occasional fatigue or mood problems after transplant
End-stage renal disease on dialysis due to hypertension	fatigue, pains and shortness of breath in person undergoing intensive dialysis medical care every other day
Stage III chronic kidney disease without anemia due to glomerulonephritis	stage III chronic kidney disease due to glomerulonephritis, currently without symptoms
Stage III chronic kidney disease and mild anemia due to glomerulonephritis	minor fatigue associated with mild anemia (2011 WHO classification)
Stage III chronic kidney disease and moderate anemia due to glomerulonephritis	moderate fatigue associated with moderate anemia (2011 WHO classification)
Stage III chronic kidney disease and severe anemia due to glomerulonephritis	severe fatigue associated with severe anemia (2011 WHO classification)
Stage IV chronic kidney disease without anemia due to glomerulonephritis	fatigue, nausea, reduced appetite and difficulty sleeping
Stage IV chronic kidney disease and mild anemia due to glomerulonephritis	minor fatigue associated with mild anemia (2011 WHO classification)
Stage IV chronic kidney disease and moderate anemia due to glomerulonephritis	moderate fatigue associated with moderate anemia (2011 WHO classification)
Stage IV chronic kidney disease and severe anemia due to glomerulonephritis	severe fatigue associated with severe anemia (2011 WHO classification)
Stage V chronic kidney disease untreated due to glomerulonephritis	terminal disease with constant pain, severe weight loss, severe fatigue
End-stage renal disease after transplant due to glomerulonephritis	occasional fatigue or mood problems after transplant
End-stage renal disease on dialysis due to glomerulonephritis	fatigue, pains and shortness of breath in person undergoing intensive dialysis medical care every other day
Stage III chronic kidney disease without anemia due to other causes	stage III chronic kidney disease due to other causes, currently without symptoms
Stage III chronic kidney disease and mild anemia due to other causes	minor fatigue associated with mild anemia (2011 WHO classification)
Stage III chronic kidney disease and moderate anemia due to other causes	moderate fatigue associated with moderate anemia (2011 WHO classification)
Stage III chronic kidney disease and severe anemia due to other causes	severe fatigue associated with severe anemia (2011 WHO classification)
Stage IV chronic kidney disease without anemia due to other causes	fatigue, nausea, reduced appetite and difficulty sleeping
Stage IV chronic kidney disease and mild anemia due to other causes	minor fatigue associated with mild anemia (2011 WHO classification)

Appendix Table A.7: Sequelae severity distribution descriptions

Sequela name	Severity description
Stage IV chronic kidney disease and moderate anemia due to other causes	moderate fatigue associated with moderate anemia (2011 WHO classification)
Stage IV chronic kidney disease and severe anemia due to other causes	severe fatigue associated with severe anemia (2011 WHO classification)
Stage V chronic kidney disease untreated due to other causes	terminal disease with constant pain, severe weight loss, severe fatigue
End-stage renal disease after transplant due to other causes	occasional fatigue or mood problems after transplant
End-stage renal disease on dialysis due to other causes	fatigue, pains and shortness of breath in person undergoing intensive dialysis medical care every other day
Mild interstitial nephritis and urinary tract infections	mild infectious disease episode with low fever and mild discomfort
Moderate interstitial nephritis and urinary tract infections	moderate infectious disease episode with fever, aches and fatigue
Acute urolithiasis	abdominal pain and nausea reported as moderate
Chronic urolithiasis	has ever had kidney stones, now either asymptomatic or with worry associated with knowledge of disease.
Asymptomatic benign prostatic hyperplasia	benign prostatic hyperplasia, currently without symptoms
Symptomatic benign prostatic hyperplasia	frequent urge and weak flow of urine
Primary male infertility	absence of a live birth in a man who desires a child and has been in a union for at least five years without using contraceptives
Secondary male infertility	absence of a live birth in a man who desires a child and has been in a union for at least five years since the last live birth, without using contraceptives
Asymptomatic uterine fibroids	uterine fibroids, currently without symptoms
Symptomatic uterine fibroids	abdominal pain and nausea reported as mild
Mild anemia due to uterine fibroids	uterine fibroids with abdominal pain and nausea reported as mild and minor fatigue associated with mild anemia (2011 WHO classification)
Moderate anemia due to uterine fibroids	uterine fibroids with abdominal pain and nausea reported as mild and moderate fatigue associated with moderate anemia (2011 WHO classification)
Severe anemia due to uterine fibroids	uterine fibroids with abdominal pain and nausea reported as mild and severe fatigue associated with severe anemia (2011 WHO classification)
Asymptomatic polycystic ovarian syndrome	polycystic ovarian syndrome without symptoms
Hirsutism due to polycystic ovarian syndrome	hirsutism
Hirsutism and primary infertility due to polycystic ovarian syndrome	hirsutism and absence of a live birth in a woman who desires a child and has been in a union for at least five years without using contraceptives
Primary infertility due to polycystic ovarian syndrome	absence of a live birth in a woman who desires a child and has been in a union for at least five years without using contraceptives
Hirsutism and secondary infertility due to polycystic ovarian syndrome	hirsutism and absence of a live birth in a woman who desires a child and has been in a union for at least five years since her last live birth without using contraceptives
Secondary infertility due to polycystic ovarian syndrome	hirsutism and absence of a live birth in a woman who desires a child and has been in a union for at least five years since her last live birth, without using contraceptives
Idiopathic primary female infertility	absence of a live birth in a woman who desires a child and has been in a union for at least five years without using contraceptives
Idiopathic secondary female infertility	absence of a live birth in a woman who desires a child and has been in a union for at least five years since her last live birth without using contraceptives
Asymptomatic endometriosis	endometriosis, currently without symptoms

Appendix Table A.7: Sequelae severity distribution descriptions

Sequela name	Severity description
Mild abdominal pain due to endometriosis	abdominal pain and nausea reported as mild
Moderate abdominal pain due to endometriosis	abdominal pain and nausea reported as moderate
Severe endometriosis	abdominal pain and nausea reported as severe
Primary infertility due to endometriosis	absence of a live birth in a woman who desires a child and has been in a union for at least five years without using contraceptives
Mild abdominal pain and primary infertility due to endometriosis	abdominal pain and nausea reported as mild and absence of a live birth in a woman who desires a child and has been in a union for at least five years without using contraceptives
Moderate abdominal pain and primary infertility due to endometriosis	abdominal pain and nausea reported as moderate and absence of a live birth in a woman who desires a child and has been in a union for at least five years without using contraceptives
Severe abdominal pain and primary infertility due to endometriosis	abdominal pain and nausea reported as severe and absence of a live birth in a woman who desires a child and has been in a union for at least five years without using contraceptives
Secondary infertility due to endometriosis	absence of a live birth in a woman who desires a child and has been in a union for at least five years since her last live birth, without using contraceptives
Mild abdominal pain and secondary infertility due to endometriosis	abdominal pain and nausea reported as mild and absence of a live birth in a woman who desires a child and has been in a union for at least five years since her last live birth without
Moderate abdominal pain and secondary infertility due to endometriosis	abdominal pain and nausea reported as moderate and absence of a live birth in a woman who desires a child and has been in a union for at least five years since her last live birth without
Severe abdominal pain and secondary infertility due to endometriosis	abdominal pain and nausea reported as severe and absence of a live birth in a woman who desires a child and has been in a union for at least five years since her last live birth without
Asymptomatic genital prolapse	genital prolapse without symptoms
Abdominal pain due to genital prolapse	abdominal pain and nausea reported as mild
Stress incontinence due to genital prolapse	stress incontinence
Abdominal pain and stress incontinence due to genital prolapse	abdominal pain and nausea reported as mild and stress incontinence
Asymptomatic premenstrual syndrome	premenstrual syndrome without symptoms
Abdominal pain and depression due to premenstrual syndrome	abdominal pain and nausea reported as mild and DSM-IV premenstrual dysphoric disorder
Abdominal pain due to premenstrual syndrome	abdominal pain and nausea reported as mild
Depression due to premenstrual syndrome	DSM-IV premenstrual dysphoric disorder
Asymptomatic other gynecological disorders	other gynecological disorders without symptoms
Mild other gynecological disorders	mild other gynecological disorders (MEPS analysis)
Moderate other gynecological disorders	moderately severe other gynecological disorders (MEPS analysis)
Severe other gynecological disorders	severe other gynecological disorders (MEPS analysis)
Mild anemia due to other gynecological diseases	other gynecological disorders with minor fatigue associated with mild anemia (2011 WHO classification)
Moderate anemia due to other gynecological diseases	other gynecological disorders with moderate fatigue associated with moderate anemia (2011 WHO classification)
Severe anemia due to other gynecological diseases	other gynecological disorders with severe fatigue associated with severe anemia (2011 WHO classification)
Severe infection associated with beta-thalassemia major	severe infectious disease episode from beta-thalassemia major with high fever, pain and severe fatigue

Appendix Table A.7: Sequelae severity distribution descriptions

Sequela name	Severity description
Mild anemia due to beta-thalassemia major	beta-thalassemia major with minor fatigue associated with mild anemia (2011 WHO classification)
Moderate anemia due to beta-thalassemia major	beta-thalassemia major with moderate fatigue associated with moderate anemia (2011 WHO classification)
Severe anemia due to beta-thalassemia major	beta-thalassemia major with severe fatigue associated with severe anemia (2011 WHO classification)
Severe infection associated with hemoglobin E/beta-thalassemia	severe infectious disease episode from hemoglobin E/beta-thalassemia with high fever, pain and severe fatigue
Mild anemia due to hemoglobin E/beta-thalassemia	hemoglobin E/beta-thalassemia with minor fatigue associated with mild anemia (2011 WHO classification)
Moderate anemia due to hemoglobin E/beta-thalassemia	hemoglobin E/beta-thalassemia with moderate fatigue associated with moderate anemia (2011 WHO classification)
Severe anemia due to hemoglobin E/beta-thalassemia	hemoglobin E/beta-thalassemia with severe fatigue associated with severe anemia (2011 WHO classification)
Severe infection associated with hemoglobin H disease	severe infectious disease episode from hemoglobin H disease with high fever, pain and severe fatigue
Mild anemia due to hemoglobin H disease	hemoglobin H disease with minor fatigue associated with mild anemia (2011 WHO classification)
Moderate anemia due to hemoglobin H disease	hemoglobin H disease with moderate fatigue associated with moderate anemia (2011 WHO classification)
Severe anemia due to hemoglobin H disease	hemoglobin H disease with severe fatigue associated with severe anemia (2011 WHO classification)
Mild heart failure due to thalassemias	severe thalassemia with shortness of breath and fatigue after moderate physical activity that goes away after a rest (NYHA Class I-II heart failure)
Moderate heart failure due to thalassemias	severe thalassemia with shortness of breath and fatigue after minimal physical activity that goes away after a rest (NYHA Class III heart failure)
Severe heart failure due to thalassemias	severe thalassemia with shortness of breath and fatigue even when at rest causing a person to avoid any physical activity (NYHA Class IV heart failure)
Asymptomatic B-thalassemia trait	B-thalassemia trait without symptoms
Mild anemia due to B-thalassemia trait	B-thalassemia trait with minor fatigue associated with mild anemia (2011 WHO classification)
Moderate anemia due to B-thalassemia trait	B-thalassemia trait with moderate fatigue associated with moderate anemia (2011 WHO classification)
Severe anemia due to B-thalassemia trait	B-thalassemia trait with severe fatigue associated with severe anemia (2011 WHO classification)
Asymptomatic hemoglobin E trait	hemoglobin E trait without symptoms
Mild anemia due to hemoglobin E trait	hemoglobin E trait with minor fatigue associated with mild anemia (2011 WHO classification)
Moderate anemia due to hemoglobin E trait	hemoglobin E trait with moderate fatigue associated with moderate anemia (2011 WHO classification)
Severe anemia due to hemoglobin E trait	hemoglobin E trait with severe fatigue associated with severe anemia (2011 WHO classification)
Vaso-occlusive crises due to homozygous sickle cell and severe sickle cell/beta-thalassemia	severe pain crisis due to homozygous sickle cell and severe sickle cell/beta-thalassemia with worry and anxiety
Stroke due to homozygous sickle cell and severe sickle cell/beta-thalassemia	fourth of five levels of motor and cognitive impairment after stroke due to homozygous sickle cell and severe sickle cell/beta-thalassemia and with worry and anxiety
Vaso-occlusive crises and stroke due to homozygous sickle cell and severe sickle cell/beta-thalassemia	severe pain crisis with fourth of five levels of motor and cognitive impairment after stroke due to homozygous sickle cell and severe sickle cell/beta-thalassemia and with worry and
Mild anemia due to homozygous sickle cell and severe sickle cell/B-thalassemia	homozygous sickle cell and severe sickle cell/B-thalassemia with minor fatigue associated with mild anemia (2011 WHO classification)
Moderate anemia due to homozygous sickle cell and severe sickle cell/B-thalassemia	homozygous sickle cell and severe sickle cell/B-thalassemia with moderate fatigue associated with moderate anemia (2011 WHO classification)

Appendix Table A.7: Sequelae severity distribution descriptions

Sequela name	Severity description
Severe anemia due to homozygous sickle cell and severe sickle cell/B-thalassemia	homozygous sickle cell and severe sickle cell/B-thalassemia with severe fatigue associated with severe anemia (2011 WHO classification)
Vaso-occlusive crises due to hemoglobin SC disease	severe pain crisis due to hemoglobin SC disease with worry and anxiety
Stroke due to hemoglobin SC disease	fourth of five levels of motor and cognitive impairment after stroke due to hemoglobin SC disease and with worry and anxiety
Vaso-occlusive crises and stroke due to hemoglobin SC disease	severe pain crisis with fourth of five levels of motor and cognitive impairment after stroke due to hemoglobin SC disease and with worry and anxiety
Mild anemia due to hemoglobin SC disease	hemoglobin SC disease with minor fatigue associated with mild anemia (2011 WHO classification)
Moderate anemia due to hemoglobin SC disease	hemoglobin SC disease with moderate fatigue associated with moderate anemia (2011 WHO classification)
Severe anemia due to hemoglobin SC disease	hemoglobin SC disease with severe fatigue associated with severe anemia (2011 WHO classification)
Vaso-occlusive crises due to mild sickle cell/beta-thalassemia	severe pain crisis due to mild sickle cell/beta-thalassemia with worry and anxiety
Stroke due to mild sickle cell/beta-thalassemia	fourth of five levels of motor and cognitive impairment after stroke due to mild sickle cell/beta-thalassemia and with worry and anxiety
Vaso-occlusive crises and stroke due to mild sickle cell/beta-thalassemia	severe pain crisis with fourth of five levels of motor and cognitive impairment after stroke due to mild sickle cell/beta-thalassemia and with worry and anxiety
Mild anemia due to mild sickle cell/B-thalassemia	mild sickle cell/B-thalassemia with minor fatigue associated with mild anemia (2011 WHO classification)
Moderate anemia due to mild sickle cell/B-thalassemia	mild sickle cell/B-thalassemia with moderate fatigue associated with moderate anemia (2011 WHO classification)
Severe anemia due to mild sickle cell/B-thalassemia	mild sickle cell/B-thalassemia with severe fatigue associated with severe anemia (2011 WHO classification)
Asymptomatic sickle cell trait	sickle cell trait without symptoms
Mild anemia due to sickle cell trait	sickle cell trait with minor fatigue associated with mild anemia (2011 WHO classification)
Moderate anemia due to sickle cell trait	sickle cell trait with moderate fatigue associated with moderate anemia (2011 WHO classification)
Severe anemia due to sickle cell trait	sickle cell trait with severe fatigue associated with severe anemia (2011 WHO classification)
Asymptomatic G6PD deficiency	G6PD deficiency without symptoms
Mild anemia due to G6PD deficiency	G6PD deficiency with minor fatigue associated with mild anemia (2011 WHO classification)
Moderate anemia due to G6PD deficiency	G6PD deficiency with moderate fatigue associated with moderate anemia (2011 WHO classification)
Severe anemia due to G6PD deficiency	G6PD deficiency with severe fatigue associated with severe anemia (2011 WHO classification)
Mild heart failure due to G6PD deficiency	G6PD deficiency with shortness of breath and fatigue after moderate physical activity that goes away after a rest (NYHA Class I-II heart failure)
Moderate heart failure due to G6PD deficiency	G6PD deficiency with shortness of breath and fatigue after minimal physical activity that goes away after a rest (NYHA Class III heart failure)
Severe heart failure due to G6PD deficiency	G6PD deficiency with shortness of breath and fatigue even when at rest causing a person to avoid any physical activity (NYHA Class IV heart failure)
Asymptomatic hemizygous G6PD deficiency	hemizygous G6PD deficiency without symptoms
Mild anemia due to hemizygous G6PD deficiency	hemizygous G6PD deficiency with minor fatigue associated with mild anemia (2011 WHO classification)
Moderate anemia due to hemizygous G6PD deficiency	hemizygous G6PD deficiency with moderate fatigue associated with moderate anemia (2011 WHO classification)

Appendix Table A.7: Sequelae severity distribution descriptions

Sequela name	Severity description
Severe anemia due to hemizygous G6PD deficiency	hemizygous G6PD deficiency with severe fatigue associated with severe anemia (2011 WHO classification)
Mild anemia due to other hemoglobinopathies and hemolytic anemias	other hemoglobinopathies and hemolytic anemias with minor fatigue associated with mild anemia (2011 WHO classification)
Moderate anemia due to other hemoglobinopathies and hemolytic anemias	other hemoglobinopathies and hemolytic anemias with moderate fatigue associated with moderate anemia (2011 WHO classification)
Severe anemia due to other hemoglobinopathies and hemolytic anemias	other hemoglobinopathies and hemolytic anemias with severe fatigue associated with severe anemia (2011 WHO classification)
Mild heart failure due to other hemoglobinopathies and hemolytic anemias	other hemoglobinopathies and hemolytic anemias with shortness of breath and fatigue after moderate physical activity that goes away after a rest (NYHA Class I-II heart failure)
Moderate heart failure due to other hemoglobinopathies and hemolytic anemias	other hemoglobinopathies and hemolytic anemias with shortness of breath and fatigue after minimal physical activity that goes away after a rest (NYHA Class III heart failure)
Severe heart failure due to other hemoglobinopathies and hemolytic anemias	other hemoglobinopathies and hemolytic anemias with shortness of breath and fatigue even when at rest causing a person to avoid physical activity (NYHA Class IV heart failure)
Asymptomatic endocrine, metabolic, blood, and immune disorders	endocrine, metabolic, blood, and immune disorders, currently without symptoms
	First of three levels of severity for endocrine, metabolic, blood and immune disorders
Mild endocrine, metabolic, blood, and immune disorders	
Moderate endocrine, metabolic, blood, and immune disorders	Second of three levels of severity for endocrine, metabolic, blood and immune disorders
Severe endocrine, metabolic, blood, and immune disorders	third of three levels of severity for endocrine, metabolic, blood and immune disorders
Mild anemia due to endocrine, metabolic, blood, and immune disorders	endocrine, metabolic, blood, and immune disorders with minor fatigue associated with mild anemia (2011 WHO classification)
Moderate anemia due to endocrine, metabolic, blood, and immune disorders	endocrine, metabolic, blood, and immune disorders with moderate fatigue associated with moderate anemia (2011 WHO classification)
Severe anemia due to endocrine, metabolic, blood, and immune disorders	endocrine, metabolic, blood, and immune disorders with severe fatigue associated with severe anemia (2011 WHO classification)
Mild heart failure due to endocrine, metabolic, blood, and immune disorders	shortness of breath and fatigue after moderate physical activity that goes away after a rest (NYHA Class I-II heart failure)
Moderate heart failure due to endocrine, metabolic, blood, and immune disorders	shortness of breath and fatigue after minimal physical activity that goes away after a rest (NYHA Class III heart failure)
Severe heart failure due to endocrine, metabolic, blood, and immune disorders	shortness of breath and fatigue even when at rest causing a person to avoid any physical activity (NYHA Class IV heart failure)
	Health Assessment Questionnaire score 0.25-0.5
Mild rheumatoid arthritis	
	Health Assessment Questionnaire score 0.6-1.3
Moderate rheumatoid arthritis	
	Health Assessment Questionnaire score >1.4
Severe rheumatoid arthritis	
Mild osteoarthritis of the hip	mild pain in the hip (Western Ontario and McMaster Osteoarthritis Arthritis Index [WOMAC] score 0-5)
Moderate osteoarthritis of the hip	moderate pain in the hip (Western Ontario and McMaster Osteoarthritis Arthritis Index [WOMAC] 6-13)
Severe osteoarthritis of the hip	severe pain in the hip (Western Ontario and McMaster Osteoarthritis Arthritis Index [WOMAC] 14-20)
Mild osteoarthritis of the knee	mild pain in the knee (Western Ontario and McMaster Osteoarthritis Arthritis Index [WOMAC] score 0-5)
Moderate osteoarthritis of the knee	moderate pain in the knee (Western Ontario and McMaster Osteoarthritis Arthritis Index [WOMAC] 6-13)
Severe osteoarthritis of the knee	severe pain in the knee (Western Ontario and McMaster Osteoarthritis Arthritis Index [WOMAC] 14-20)
Mild low back pain without leg pain	least severe of four levels of severity of low back pain (MEPS analysis)

Appendix Table A.7: Sequelae severity distribution descriptions

Sequela name	Severity description
Mild low back pain with leg pain	least severe of four levels of severity of low back pain (MEPS analysis)
Moderate low back pain without leg pain	second of four levels of severity of low back pain (MEPS analysis)
Moderate low back pain with leg pain	second of four levels of severity of low back pain (MEPS analysis)
Severe low back pain without leg pain	third of four levels of severity of low back pain (MEPS analysis)
Severe low back pain with leg pain	third of four levels of severity of low back pain with leg involvement (MEPS analysis)
Most severe low back pain without leg pain	most severe of four levels of severity of low back pain (MEPS analysis)
Most severe low back pain with leg pain	most severe of four levels of severity of low back pain with leg involvement (MEPS analysis)
Mild neck pain	least severe of four levels of severity of neck pain (MEPS analysis)
Moderate neck pain	second of four levels of severity of neck pain (MEPS analysis)
Severe neck pain	third of four levels of severity of neck pain (MEPS analysis)
Most severe neck pain	most severe of four levels of severity of neck pain (MEPS analysis)
Asymptomatic gout	gout, currently without symptoms
Symptomatic episodes of gout	severe pain and swelling in the leg
Polyarticular gout	chronic severe pain and swelling in the leg
Asymptomatic other musculoskeletal disorders	other musculoskeletal disorders, currently without symptoms
Other musculoskeletal disorders severity level 1	least severe of six levels of severity of other musculoskeletal disorders (MEPS analysis)
Other musculoskeletal disorders severity level 2	second of six levels of severity of other musculoskeletal disorders (MEPS analysis)
Other musculoskeletal disorders severity level 3	third of six levels of severity of other musculoskeletal disorders (MEPS analysis)
Other musculoskeletal disorders severity level 4	fourth of six levels of severity of other musculoskeletal disorders (MEPS analysis)
Other musculoskeletal disorders severity level 5	fifth of six levels of severity of other musculoskeletal disorders (MEPS analysis)
Other musculoskeletal disorders severity level 6	most severe of six levels of severity of other musculoskeletal disorders (MEPS analysis)
Moderate motor impairment due to moderate neural tube defects	moderate motor impairment (spasticity and paresis but able to walk)
Severe motor impairment due to severe neural tube defects	severe motor impairment (unable to walk)
Severe motor plus cognitive impairments due to severe neural tube defects	severe motor impairment (unable to walk) plus intellectual disability (IQ <70)
Severe motor impairment with incontinence due to severe neural tube defects	severe motor impairment (unable to walk) and incontinent
Mild heart failure due to congenital heart anomalies	shortness of breath and fatigue after moderate physical activity that goes away after a rest (NYHA Class I-II heart failure)
Moderate heart failure due to congenital heart anomalies	shortness of breath and fatigue after minimal physical activity that goes away after a rest (NYHA Class III heart failure)

Appendix Table A.7: Sequelae severity distribution descriptions

Sequela name	Severity description
Severe heart failure due to congenital heart anomalies	shortness of breath and fatigue even when at rest causing a person to avoid any physical activity (NYHA Class IV heart failure)
Symptomatic less severe congenital heart anomalies	physical and mental function limitations due to congenital heart disease
Severe congenital heart anomalies	physical and mental function limitations due to congenital heart disease
Critical congenital heart anomalies	physical and mental function limitations due to congenital heart disease
Asymptomatic orofacial clefts	cleft lip and palate after successful surgery, without symptoms
Disfigurement level 1 due to orofacial clefts	slight visible physical deformity that others notice which causes some worry and discomfort
Disfigurement level 2 due to orofacial clefts	visible physical deformity that causes others to stare and comment which causes anxiety
Disfigurement level 2 and speech problems due to orofacial clefts	difficulty speaking and being understood; and visible physical deformity that is sore and itchy and causes others to stare and comment which causes anxiety
Asymptomatic Down syndrome	down syndrome with normal intelligence and no congenital heart disease
Intellectual disability due to Down syndrome	intellectual disability (IQ <85)
Intellectual disability with congenital heart disease due to Down syndrome	intellectual disability (IQ <85) and mental function limitations due to congenital heart disease
Intellectual disability with dementia due to Down syndrome	intellectual disability (IQ <85) and dementia
Intellectual disability with congenital heart disease and dementia due to Down syndrome	intellectual disability (IQ <85), physical and mental function limitations due to congenital heart disease, and dementia
Isolated congenital heart disease due to Down syndrome	physical and mental function limitations due to congenital heart disease
Asymptomatic Turner syndrome	Turner syndrome without congenital heart disease at age range outside the fertility period
Congenital heart disease due to Turner syndrome	physical and mental function limitations due to congenital heart disease
Primary infertility due to Turner syndrome	absence of a live birth in a woman who desires a child and has been in a union for at least five years without using contraceptives
Congenital heart disease with infertility due to Turner syndrome	physical and mental function limitations due to congenital heart disease and absence of a live birth in a woman who desires a child and has been in a union for at least five years without
Asymptomatic Klinefelter syndrome	Klinefelter syndrome with normal intelligence and age range outside the fertility period
Borderline intellectual disability due to Klinefelter syndrome	borderline intellectual disability (IQ 70-84)
Borderline intellectual disability with infertility due to Klinefelter syndrome	borderline intellectual disability (IQ 70-84) and absence of a live birth in a man who desires a child and has been in a union for at least five years without using contraceptives
Mild intellectual disability due to Klinefelter syndrome	intellectual disability (IQ 50-69)
Mild intellectual disability with infertility due to Klinefelter syndrome	intellectual disability (IQ 50-69) and absence of a live birth in a man who desires a child and has been in a union for at least five years without using contraceptives
Primary infertility due to Klinefelter syndrome	absence of a live birth in a man who desires a child and has been in a union for at least five years without using contraceptives
Asymptomatic chromosomal unbalanced rearrangements	chromosomal unbalanced rearrangement with normal intelligence and no congenital heart disease
Intellectual disability due to chromosomal unbalanced rearrangements	intellectual disability (IQ <85)
Intellectual disability with congenital heart disease due to chromosomal unbalanced rearrangements	intellectual disability (IQ <85) and physical and mental function limitations due to congenital heart disease

Appendix Table A.7: Sequelae severity distribution descriptions

Sequela name	Severity description
Intellectual disability with dementia due to chromosomal unbalanced rearrangements	intellectual disability (IQ <85) and dementia
Intellectual disability with congenital heart disease and dementia due to chromosomal unbalanced rearrangements	intellectual disability (IQ <85), physical and mental function limitations due to congenital heart disease, and dementia
Isolated congenital heart disease due to chromosomal unbalanced rearrangements	physical and mental function limitations due to congenital heart disease
Mild hearing loss due to other congenital anomalies	mild hearing loss (20-34dB)
Mild hearing loss with ringing due to other congenital anomalies	mild hearing loss (20-34dB) with ringing
Moderate hearing loss due to other congenital anomalies	moderate hearing loss (35-49dB)
Moderate hearing loss with ringing due to other congenital anomalies	moderate hearing loss (35-49dB) with ringing
Moderately severe hearing loss due to other congenital anomalies	moderately severe hearing loss (50-64dB)
Moderately severe hearing loss with ringing due to other congenital anomalies	moderately severe hearing loss (50-64dB) with ringing
Severe hearing loss with ringing due to other congenital anomalies	severe hearing loss (65-79dB) with ringing
Severe hearing loss due to other congenital anomalies	severe hearing loss (65-79dB)
Profound hearing loss due to other congenital anomalies	profound hearing loss (80-94dB)
Profound hearing loss with ringing due to other congenital anomalies	profound hearing loss (80-94dB) with ringing
Complete hearing loss due to other congenital anomalies	complete hearing loss (95dB+)
Complete hearing loss with ringing due to other congenital anomalies	complete hearing loss (95dB+) with ringing
Mild eczema	slight visible physical deformity with sometimes pain or itch that others notice which causes some worry and discomfort
Moderate eczema	visible physical deformity that is sore and itchy and causes others to stare and comment which causes anxiety
Severe eczema	obvious physical deformity that is very painful or itchy and makes others uncomfortable, which causes the person to avoid social contact, feel worried, sleep poorly, and think about contact dermatitis, currently without symptoms
Asymptomatic contact dermatitis	contact dermatitis, currently without symptoms
Mild contact dermatitis	slight visible physical deformity with sometimes pain or itch that others notice which causes some worry and discomfort
Severe contact dermatitis	visible physical deformity that is sore and itchy and causes others to stare and comment which causes anxiety
Asymptomatic seborrheic dermatitis	seborrheic dermatitis, currently without symptoms
Symptomatic seborrheic dermatitis	slight visible physical deformity with sometimes pain or itch that others notice which causes some worry and discomfort
Mild psoriasis	slight visible physical deformity with sometimes pain or itch that others notice which causes some worry and discomfort
Moderate psoriasis	visible physical deformity that is sore and itchy and causes others to stare and comment which causes anxiety
Severe psoriasis	obvious physical deformity that is very painful or itchy and makes others uncomfortable, which causes the person to avoid social contact, feel worried, sleep poorly, and think about
Mild cellulitis	slight visible physical deformity with sometimes pain or itch that others notice which causes some worry and discomfort

Appendix Table A.7: Sequelae severity distribution descriptions

Sequela name	Severity description
Severe cellulitis	visible physical deformity that is sore and itchy and causes others to stare and comment which causes anxiety
Impetigo	mild infectious disease episode with low fever and mild discomfort
Abscess and other bacterial skin diseases	mild infectious disease episode with low fever and mild discomfort
Tinea capitis	mild infectious disease episode with low fever and mild discomfort
Other fungal skin diseases	mild infectious disease episode with low fever and mild discomfort
Mild molluscum contagiosum	mild infectious disease episode with low fever and mild discomfort
Severe molluscum contagiosum	visible physical deformity that causes others to stare and comment which causes anxiety
Mild viral warts	mild infectious disease episode with low fever and mild discomfort
Severe viral warts	visible physical deformity that causes others to stare and comment which causes anxiety
Mild alopecia areata	slight visible physical deformity that others notice which causes some worry and discomfort
Severe alopecia areata	visible physical deformity that causes others to stare and comment which causes anxiety
Mild urticaria	slight visible physical deformity with sometimes pain or itch that others notice which causes some worry and discomfort
Severe urticaria	visible physical deformity that is sore and itchy and causes others to stare and comment which causes anxiety
Mild decubitus ulcer	slight visible physical deformity that others notice which causes some worry and discomfort
Moderate decubitus ulcer	visible physical deformity that causes others to stare and comment which causes anxiety
Severe decubitus ulcer	obvious physical deformity that makes others uncomfortable, which causes the person to avoid social contact, feel worried, sleep poorly, and think about suicide
Asymptomatic other skin and subcutaneous diseases	other skin disease, currently without symptoms
Symptomatic other skin and subcutaneous diseases	slight visible physical deformity that others notice which causes some worry and discomfort
Moderate vision impairment due to glaucoma	moderate vision impairment (vision <6/18 & ≥6/60 in better eye)
Severe vision impairment due to glaucoma	severe vision impairment (vision <6/60 & ≥3/60 in better eye)
Blindness due to glaucoma	blindness (vision <3/60 in better eye)
Moderate vision impairment due to cataract	moderate vision impairment (vision <6/18 & ≥6/60 in better eye)
Severe vision impairment due to cataract	severe vision impairment (vision <6/60 & ≥3/60 in better eye)
Blindness due to cataract	blindness (vision <3/60 in better eye)
Moderate vision impairment due to macular degeneration	moderate vision impairment (vision <6/18 & ≥6/60 in better eye)
Severe vision impairment due to macular degeneration	severe vision impairment (vision <6/60 & ≥3/60 in better eye)
Blindness due to macular degeneration	blindness (vision <3/60 in better eye)

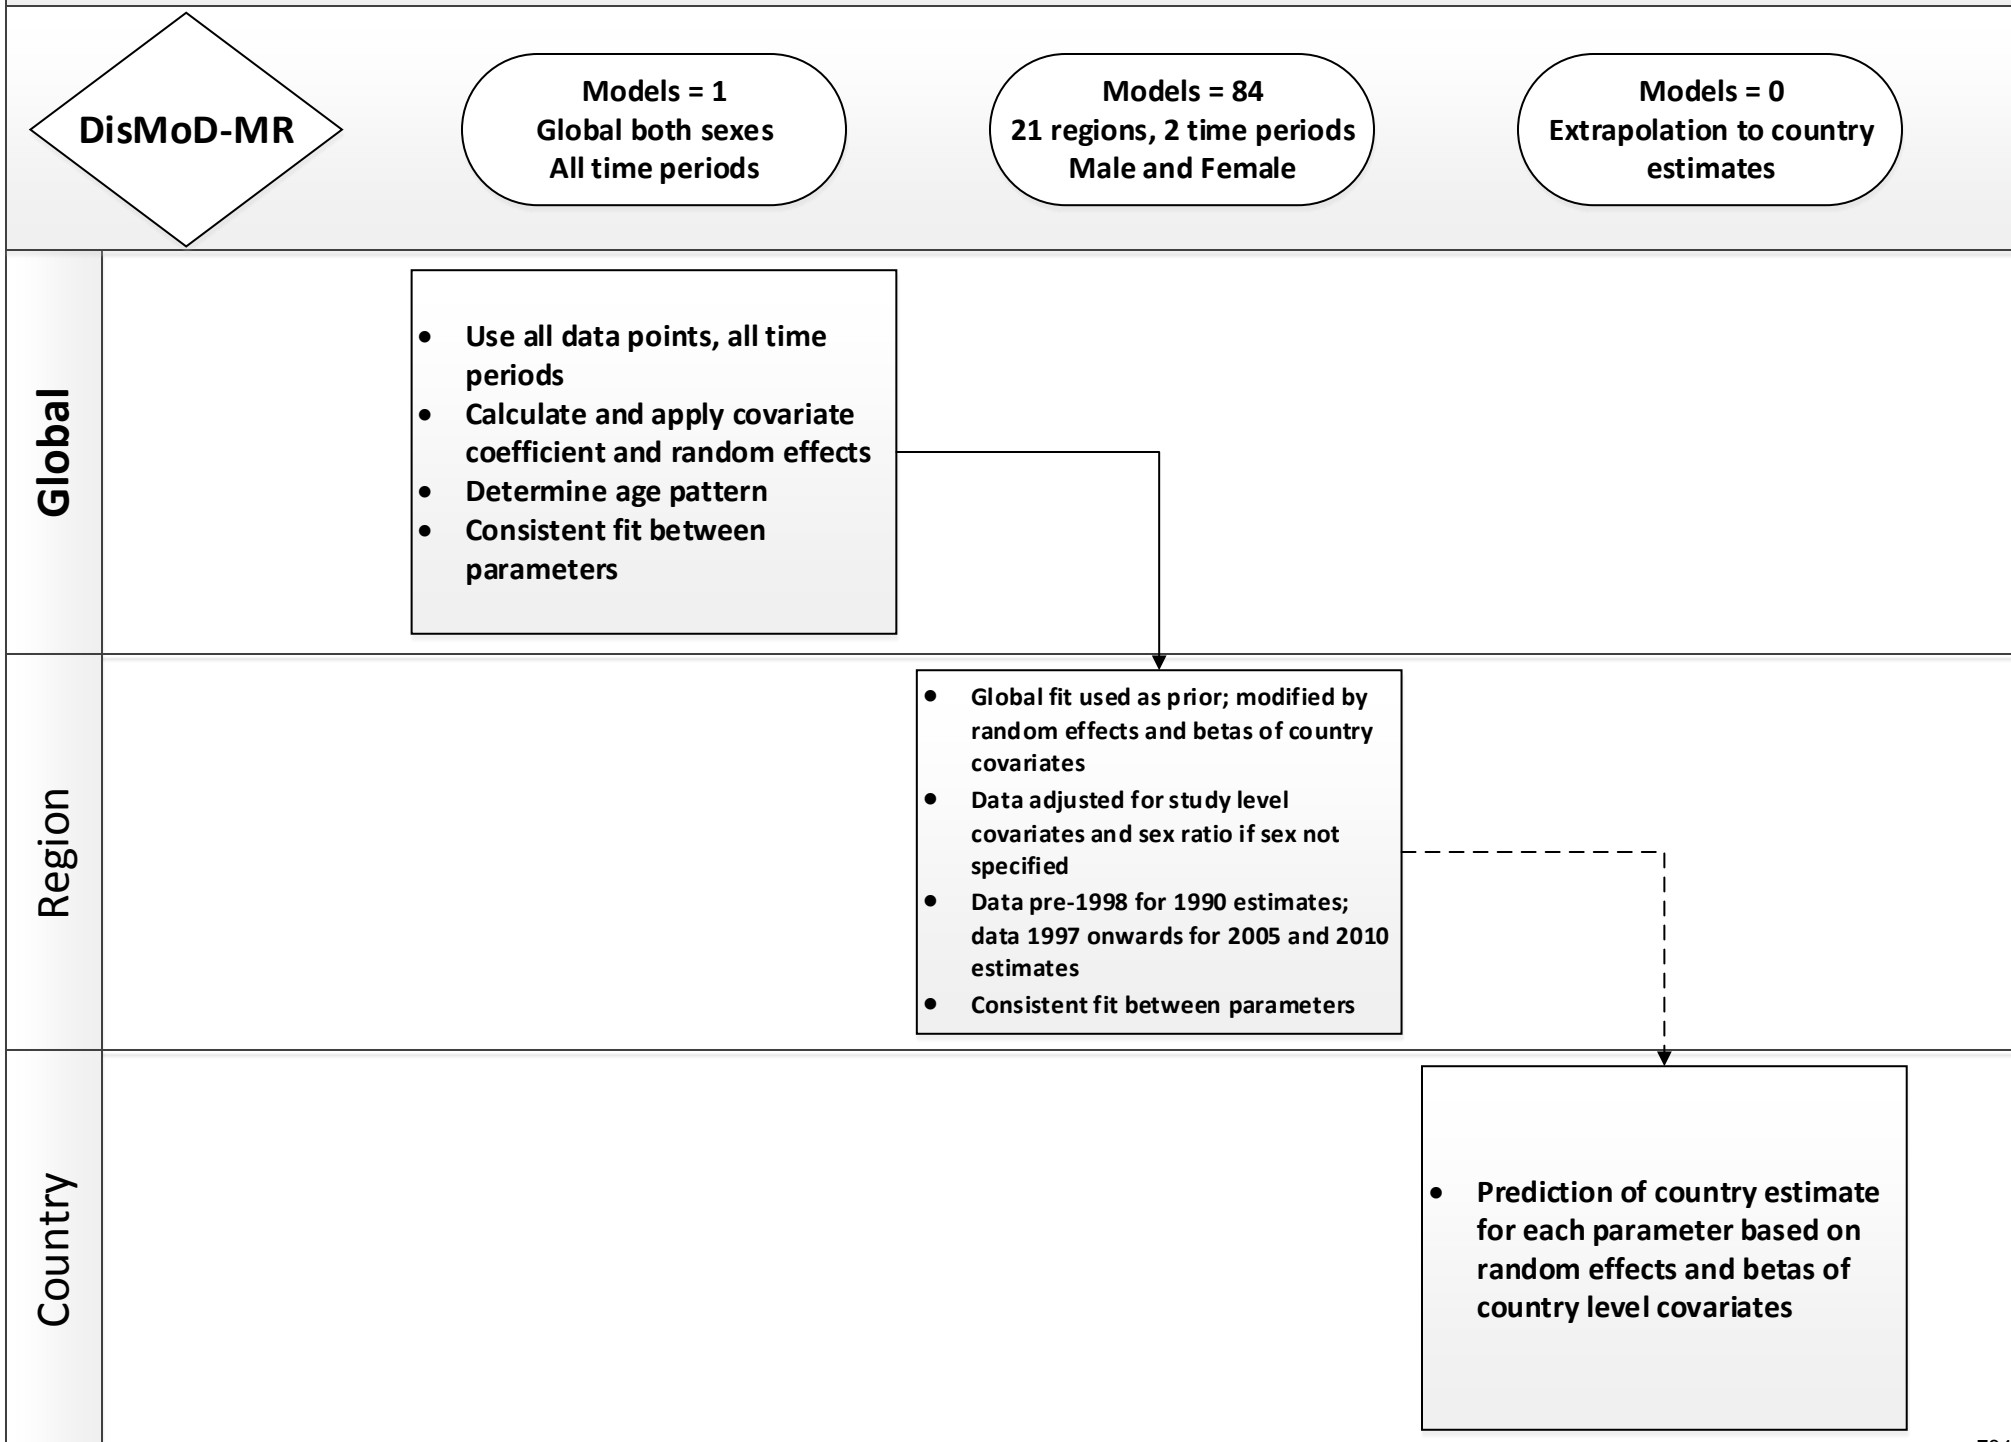

Appendix Table A.7: Sequelae severity distribution descriptions

Sequela name	Severity description
Moderate vision impairment due to uncorrected refractive error	moderate vision impairment (vision <6/18 & ≥6/60 in better eye)
Severe vision impairment due to uncorrected refractive error	severe vision impairment (vision <6/60 & ≥3/60 in better eye)
Blindness due to uncorrected refractive error	blindness (vision <3/60 in better eye)
Mild hearing loss due to age-related and other hearing loss	mild hearing loss (20-34dB)
Mild hearing loss with ringing due to age-related and other hearing loss	mild hearing loss (20-34dB) with ringing
Moderate hearing loss due to age-related and other hearing loss	moderate hearing loss (35-49dB)
Moderate hearing loss with ringing due to age-related and other hearing loss	moderate hearing loss (35-49dB) with ringing
Moderately severe hearing loss due to age-related and other hearing loss	moderately severe hearing loss (50-64dB)
Moderately severe hearing loss with ringing due to age-related and other hearing loss	moderately severe hearing loss (50-64dB) with ringing
Severe hearing loss with ringing due to age-related and other hearing loss	severe hearing loss (65-79dB) with ringing
Severe hearing loss due to age-related and other hearing loss	severe hearing loss (65-79dB)
Profound hearing loss due to age-related and other hearing loss	profound hearing loss (80-94dB)
Profound hearing loss with ringing due to age-related and other hearing loss	profound hearing loss (80-94dB) with ringing
Complete hearing loss due to age-related and other hearing loss	complete hearing loss (95dB+)
Complete hearing loss with ringing due to age-related and other hearing loss	complete hearing loss (95dB+) with ringing
Near vision impairment due to presbyopia due to uncorrected refractive error	near vision impairment (near vision <6/12 & distance vision ≥6/12)
Moderate vision impairment due to other vision loss	moderate vision impairment (vision <6/18 & ≥6/60 in better eye)
Severe vision impairment due to other vision loss	severe vision impairment (vision <6/60 & ≥3/60 in better eye)
Blindness due to other vision loss	blindness (vision <3/60 in better eye)
Asymptomatic other sense organ diseases	other sense organ disease, currently without symptoms
Mild other sense organ diseases	mild infectious disease episode with low fever and mild discomfort
Moderate other sense organ diseases	slight visible physical deformity that other notice which causes some worry and discomfort
Severe other sense organ diseases	short spells of dizziness and loss of balance
Asymptomatic deciduous caries	deciduous caries, currently without symptoms
Tooth pain due to deciduous caries	tooth pain due to deciduous caries
Asymptomatic permanent caries	permanent caries, currently without symptoms
Tooth pain due to permanent caries	tooth pain due to permanent caries

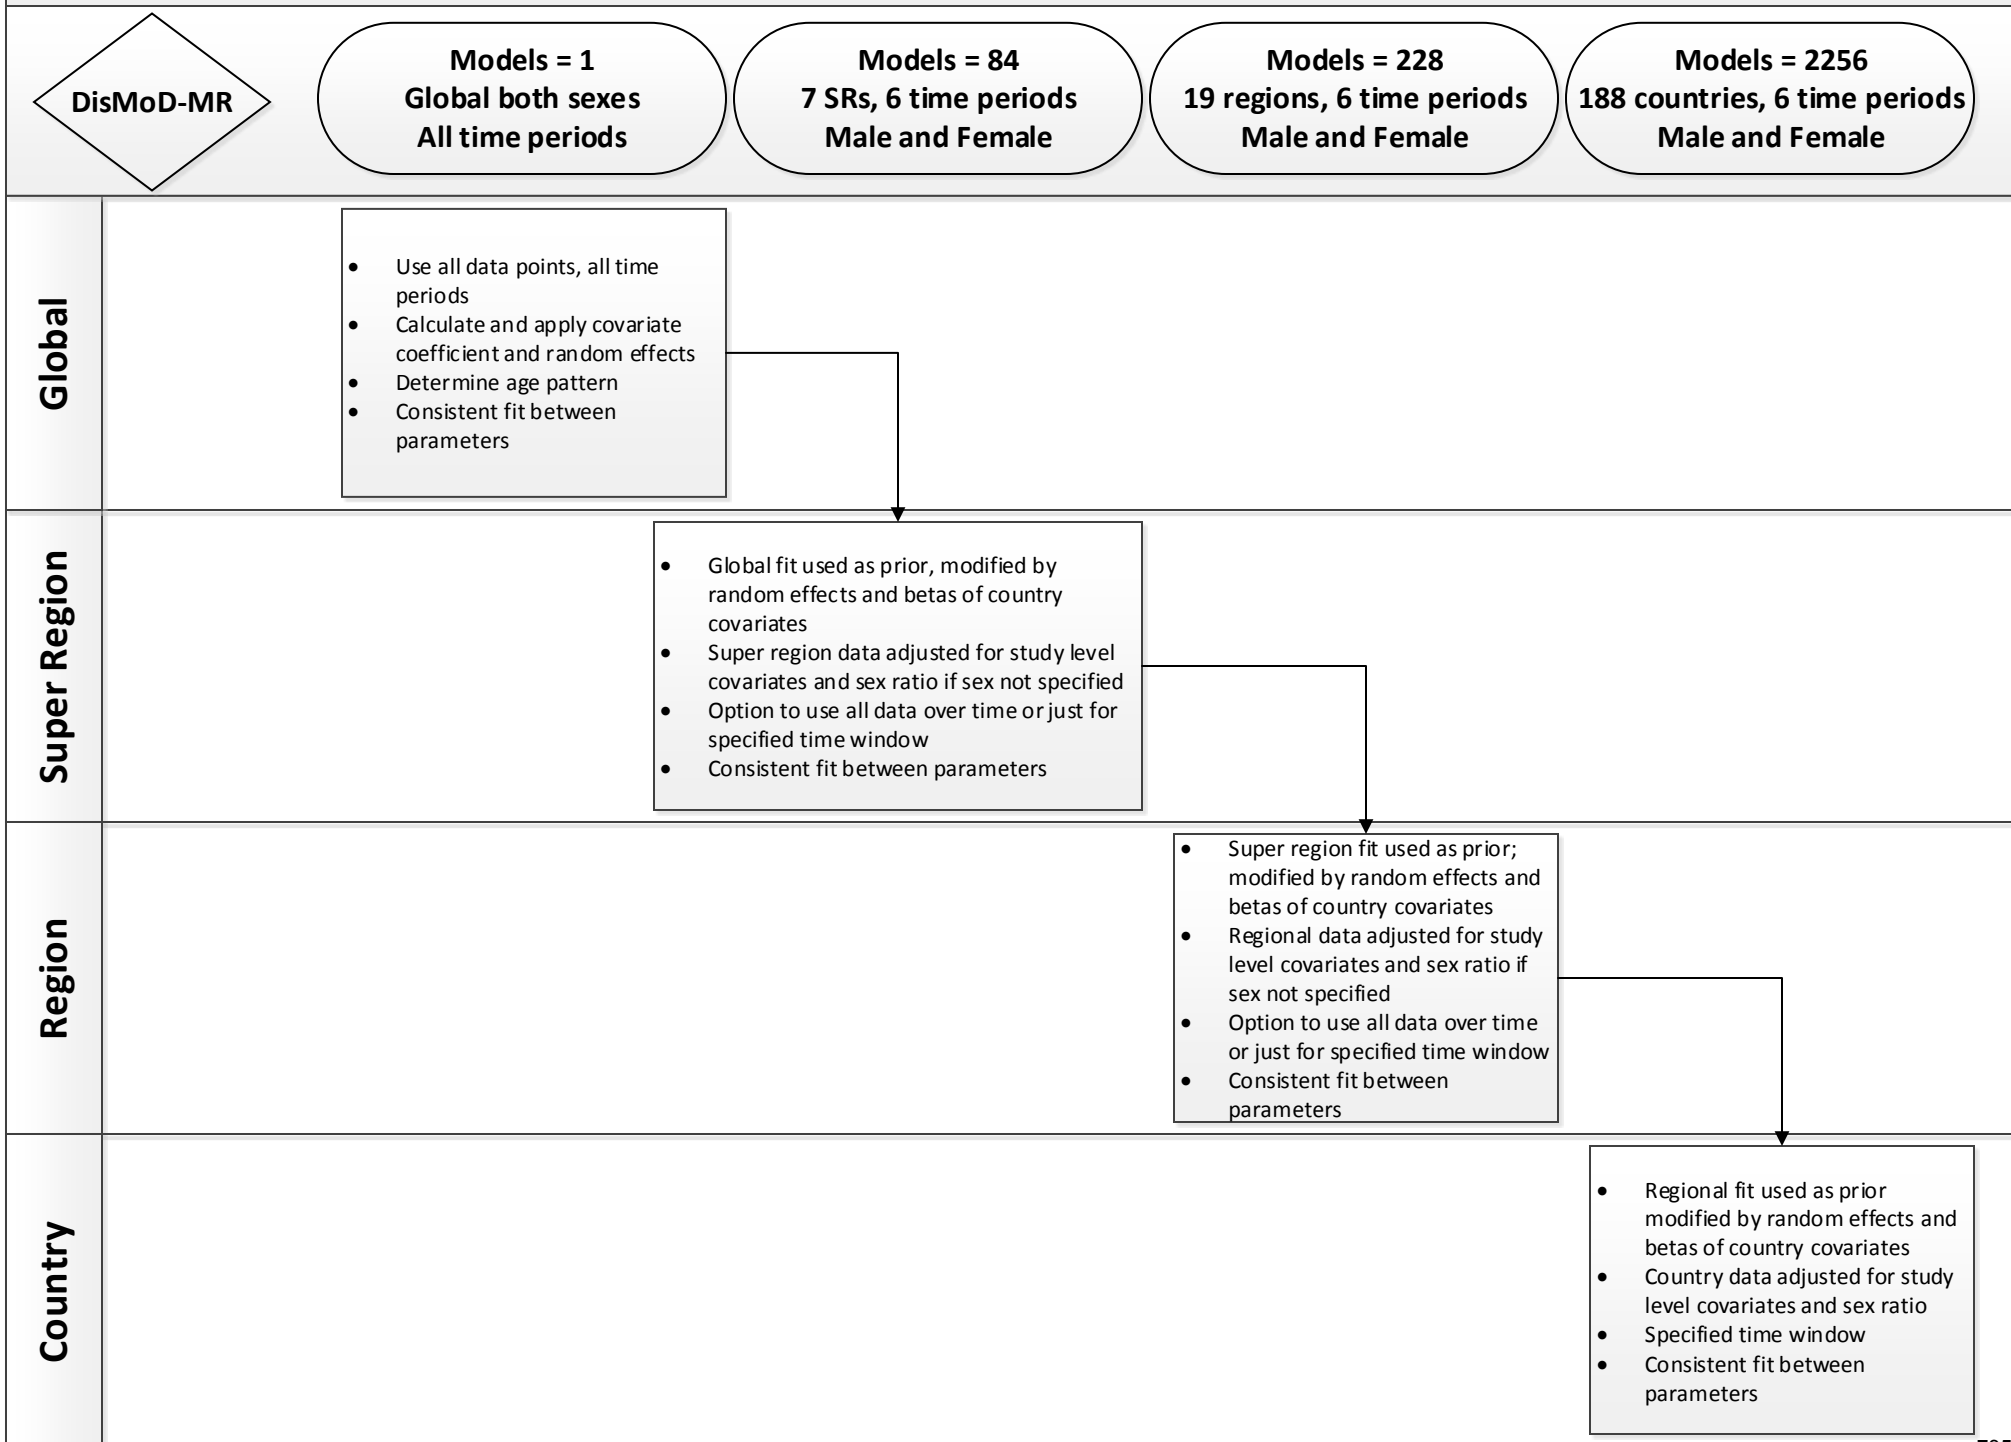

Appendix Table A.7: Sequelae severity distribution descriptions

Sequela name	Severity description
Chronic periodontal diseases	minor bleeding of the gums from time to time, with mild discomfort
Asymptomatic edentulism and severe tooth loss	9 or fewer teeth without difficulty eating meat, fruits and vegetables
Difficulty eating due to edentulism and severe tooth loss	9 or fewer teeth remaining with difficulty in eating meat, fruits, and vegetables
Mild other oral disorders	mild infectious disease episode with low fever and mild discomfort
Severe other oral disorders	moderate infectious disease episode with fever, aches and fatigue

Appendix Table G.1: Prevalence numbers and age-standardized rates with percent change between 1990 and 2013 for all causes and sequelae (statistically significant % change shown in bold)

	Prevalent cases 1990 (thousands)	Prevalent cases 2013 (thousands)	% change prevalence, 1990 to 2013	% change age-standardized prevalence, 1990 to 2013
All causes	-	-	-	-
Communicable, maternal, neonatal, and nutritional diseases	-	-	-	-
HIV/AIDS and tuberculosis	-	-	-	-
Tuberculosis	7,981.6 (7,742.7 to 8,231.3)	12,111.8 (11,791.6 to 12,452.0)	51.6 (49.3 to 54.0)	-1.9 (-3.3 to -0.3)
HIV/AIDS	-	-	-	-
HIV/AIDS resulting in mycobacterial infection	194.4 (126.7 to 270.2)	724.7 (496.0 to 922.5)	275.7 (221.2 to 335.0)	144.0 (107.3 to 184.1)
HIV/AIDS resulting in other diseases	8,485.7 (7,844.6 to 9,086.9)	28,506.6 (27,415.1 to 30,970.4)	234.1 (217.8 to 262.8)	134.5 (122.8 to 154.8)
Early HIV	5,810.0 (5,381.4 to 6,208.4)	11,948.7 (11,294.9 to 13,254.0)	104.3 (92.6 to 125.3)	43.2 (35.2 to 58.4)
Symptomatic HIV	1,971.6 (1,824.3 to 2,112.0)	4,166.1 (3,938.3 to 4,615.3)	109.9 (98.1 to 131.6)	46.8 (38.6 to 62.0)
AIDS with antiretroviral treatment	0.0 (0.0 to 0.0)	8,640.9 (8,338.7 to 8,945.8)	0.0 (0.0 to 0.0)	0.0 (0.0 to 0.0)
AIDS without antiretroviral treatment	704.0 (572.5 to 850.0)	3,751.0 (3,137.5 to 4,464.5)	432.4 (316.7 to 583.8)	236.3 (161.9 to 332.9)
Diarhea, lower respiratory, and other common infectious diseases	-	-	-	-
Diarrheal diseases	45,464.6 (44,673.7 to 46,188.5)	42,409.6 (41,769.5 to 43,170.2)	-6.9 (-8.9 to -4.7)	-18.3 (-20.1 to -16.4)
Mild diarrheal diseases	11,040.5 (10,614.4 to 11,467.8)	10,298.5 (9,884.7 to 10,711.8)	-6.9 (-8.9 to -4.7)	-18.3 (-20.1 to -16.4)
Moderate diarrheal diseases	28,045.6 (27,392.2 to 28,684.0)	26,160.0 (25,587.1 to 26,761.1)	-6.9 (-8.9 to -4.7)	-18.3 (-20.1 to -16.4)
Severe diarrheal diseases	6,375.5 (5,986.5 to 6,762.8)	5,946.9 (5,591.6 to 6,318.7)	-6.9 (-8.9 to -4.7)	-18.3 (-20.1 to -16.4)
Guillain-Barré syndrome due to diarrheal diseases	2.9 (2.3 to 3.6)	4.2 (3.3 to 5.2)	45.0 (35.2 to 55.3)	0.9 (-5.6 to 7.8)
Intestinal infectious diseases	-	-	-	-
Typhoid fever	1,496.4 (1,325.1 to 1,653.9)	1,198.3 (1,103.3 to 1,300.6)	-19.9 (-30.7 to -6.5)	-33.3 (-41.9 to -22.4)
Acute typhoid infection	525.0 (410.3 to 656.5)	420.4 (327.6 to 513.3)	-19.9 (-30.7 to -6.5)	-33.3 (-41.9 to -22.4)
Severe typhoid fever	714.8 (595.0 to 849.1)	572.4 (471.5 to 673.5)	-19.9 (-30.7 to -6.5)	-33.3 (-41.9 to -22.4)
Intestinal perforation due to typhoid	252.5 (156.8 to 346.6)	202.2 (126.4 to 282.5)	-19.9 (-30.7 to -6.5)	-33.3 (-41.9 to -22.4)
Gastrointestinal bleeding due to typhoid	4.1 (0.0 to 27.0)	3.3 (0.0 to 21.9)	-19.9 (-30.7 to -6.5)	-33.3 (-41.9 to -22.3)
Paratyphoid fever	1,020.7 (895.5 to 1,176.2)	735.9 (640.4 to 836.9)	-27.9 (-41.8 to -12.8)	-39.1 (-50.9 to -26.5)
Acute paratyphoid infection	293.5 (172.2 to 451.4)	211.7 (120.2 to 317.1)	-27.9 (-41.8 to -12.8)	-39.1 (-50.9 to -26.5)
Moderate paratyphoid fever	527.2 (342.1 to 688.7)	380.1 (250.7 to 494.5)	-27.9 (-41.8 to -12.8)	-39.1 (-50.9 to -26.5)
Severe paratyphoid fever	147.9 (78.8 to 238.9)	106.5 (57.8 to 174.7)	-27.9 (-41.8 to -12.8)	-39.1 (-50.9 to -26.5)
Intestinal perforation due to paratyphoid	52.2 (26.9 to 89.2)	37.6 (19.6 to 63.0)	-27.9 (-41.8 to -12.8)	-39.1 (-50.9 to -26.5)
Other intestinal infectious diseases	-	-	-	-
Lower respiratory infections	5,125.2 (5,052.7 to 5,205.5)	4,473.3 (4,374.7 to 4,554.2)	-12.8 (-15.7 to -10.7)	-25.5 (-27.9 to -23.8)
Moderate lower respiratory infections	1,526.7 (1,162.9 to 1,897.7)	1,332.0 (1,012.9 to 1,652.5)	-12.8 (-15.7 to -10.7)	-25.5 (-27.9 to -23.8)
Severe lower respiratory infections	3,595.5 (3,214.4 to 3,964.6)	3,136.8 (2,810.8 to 3,455.9)	-12.8 (-15.7 to -10.7)	-25.5 (-27.9 to -23.8)
Guillain-Barré syndrome due to lower respiratory infections	3.1 (1.8 to 4.5)	4.5 (2.6 to 6.5)	45.0 (35.2 to 55.3)	0.9 (-5.6 to 7.8)
Upper respiratory infections	176,323.2 (173,446.6 to 179,319.5)	244,327.5 (240,789.6 to 247,629.2)	38.4 (35.7 to 41.5)	6.3 (4.2 to 8.6)
Mild upper respiratory infections	151,626.8 (148,532.4 to 154,595.8)	210,105.1 (206,524.3 to 213,734.7)	38.4 (35.7 to 41.5)	6.3 (4.2 to 8.6)
Moderate upper respiratory infections	24,688.0 (23,074.2 to 26,237.0)	34,210.3 (32,002.0 to 36,351.3)	38.4 (35.7 to 41.5)	6.3 (4.2 to 8.6)
Guillain-Barré syndrome due to upper respiratory infections	8.4 (7.3 to 9.6)	12.2 (10.5 to 14.0)	45.0 (35.2 to 55.3)	0.9 (-5.6 to 7.8)
Otitis media	74,415.8 (71,498.9 to 77,339.8)	85,228.0 (82,190.3 to 88,667.4)	14.4 (11.9 to 16.9)	-11.1 (-12.9 to -9.1)
Acute otitis media	18,082.6 (17,692.1 to 18,501.6)	17,900.7 (17,463.0 to 18,398.8)	-1.2 (-4.3 to 2.2)	-12.7 (-15.3 to -9.8)
Severe infectious complications due to chronic otitis media	41.5 (1.5 to 150.6)	45.6 (1.7 to 165.6)	9.7 (7.0 to 12.8)	-9.7 (-11.9 to -7.1)
Vertigo with mild hearing loss due to chronic otitis media	605.8 (494.9 to 729.2)	665.5 (546.3 to 800.2)	9.7 (7.0 to 12.8)	-9.7 (-11.9 to -7.1)

Appendix Table G.1: Prevalence numbers and age-standardized rates with percent change between 1990 and 2013 for all causes and sequelae (statistically significant % change shown in bold)

	Prevalent cases 1990 (thousands)	Prevalent cases 2013 (thousands)	% change prevalence, 1990 to 2013	% change age-standardized prevalence, 1990 to 2013
Vertigo with mild hearing loss and ringing due to chronic otitis media	605.7 (494.9 to 729.1)	665.5 (546.1 to 800.0)	9.7 (7.0 to 12.8)	-9.7 (-11.8 to -7.1)
Mild hearing loss due to chronic otitis media	34,531.8 (32,357.0 to 36,654.2)	41,371.2 (39,041.0 to 43,991.5)	19.7 (16.9 to 22.6)	-11.0 (-12.9 to -8.9)
Mild hearing loss with ringing due to chronic otitis media	8,702.3 (8,053.6 to 9,333.5)	10,471.0 (9,775.8 to 11,221.3)	20.2 (17.2 to 23.4)	-11.1 (-13.0 to -8.9)
Vertigo with moderate hearing loss due to chronic otitis media	598.3 (490.6 to 717.7)	657.8 (542.1 to 786.8)	9.8 (7.1 to 13.1)	-9.8 (-12.0 to -7.1)
Vertigo with moderate hearing loss and ringing due to chronic otitis media	583.5 (480.0 to 697.7)	643.3 (533.6 to 766.9)	10.1 (7.3 to 13.5)	-9.9 (-12.1 to -7.1)
Moderate hearing loss due to chronic otitis media	7,667.7 (6,526.7 to 8,819.4)	9,186.4 (7,764.2 to 10,607.3)	19.6 (15.1 to 25.0)	-9.0 (-12.5 to -5.6)

Severe motor impairment with blindness and epilepsy due to malaria	0.3 (0.2 to 0.3)	0.4 (0.3 to 0.5)	43.7 (15.9 to 88.8)	19.3 (-3.8 to 57.6)
Severe motor plus cognitive impairment with blindness due to malaria	3.4 (2.7 to 4.1)	5.3 (4.3 to 6.5)	53.0 (24.4 to 98.8)	27.1 (3.0 to 65.5)
Severe motor plus cognitive impairment with epilepsy due to malaria	19.4 (15.4 to 23.0)	28.2 (23.0 to 33.9)	43.7 (15.9 to 88.8)	19.3 (-3.8 to 57.6)
Severe motor plus cognitive impairment with blindness and epilepsy due to malaria	1.8 (1.4 to 2.2)	2.6 (2.1 to 3.2)	43.7 (15.9 to 88.8)	19.3 (-3.8 to 57.6)
Mild anemia due to malaria parasitemia (PIPR)	22,242.9 (21,547.8 to 23,078.1)	32,355.1 (31,458.6 to 33,003.3)	45.5 (39.6 to 50.9)	12.7 (8.7 to 16.8)
Moderate anemia due to malaria parasitemia (PIPR)	32,029.3 (30,828.8 to 32,859.7)	43,882.8 (43,305.7 to 44,949.8)	36.6 (33.1 to 42.3)	12.6 (9.6 to 16.9)
Severe anemia due to malaria parasitemia (PIPR)	3,660.7 (3,400.6 to 3,864.0)	4,384.5 (4,105.6 to 4,694.9)	19.7 (6.8 to 32.4)	0.3 (-10.4 to 11.1)
Chagas disease	7,693.3 (7,562.4 to 7,810.3)	9,433.9 (9,241.1 to 9,628.4)	22.4 (19.5 to 25.7)	-16.3 (-18.3 to -14.0)
Acute Chagas disease	1.4 (1.2 to 1.7)	1.3 (1.1 to 1.5)	-9.2 (-26.3 to 13.9)	-21.6 (-36.4 to -1.6)
Mild chronic digestive disease due to Chagas disease	370.3 (297.2 to 444.1)	463.6 (370.4 to 557.0)	25.0 (21.5 to 28.7)	-18.4 (-20.6 to -15.9)
Moderate chronic digestive disease due to Chagas disease	246.9 (198.2 to 296.0)	309.1 (247.0 to 371.3)	25.0 (21.5 to 28.7)	-18.4 (-20.6 to -15.9)
Asymptomatic Chagas disease	6,738.5 (6,551.6 to 6,923.6)	8,191.2 (7,919.3 to 8,452.5)	21.4 (18.5 to 24.5)	-16.1 (-18.0 to -13.8)
Atrial fibrillation and flutter due to Chagas disease	56.2 (44.1 to 71.0)	84.5 (66.2 to 108.2)	50.1 (43.6 to 58.0)	-13.6 (-17.2 to -9.7)
Mild heart failure due to Chagas disease	69.5 (39.7 to 107.6)	95.3 (54.7 to 147.1)	37.0 (32.7 to 42.5)	-18.1 (-20.7 to -14.9)
Moderate heart failure due to Chagas disease	57.1 (34.5 to 88.7)	78.4 (47.8 to 121.2)	37.0 (32.7 to 42.5)	-18.1 (-20.7 to -14.9)
Severe heart failure due to Chagas disease	153.3 (102.1 to 220.1)	210.4 (140.8 to 301.9)	37.0 (32.7 to 42.5)	-18.1 (-20.7 to -14.9)
Leishmaniasis	-	-	-	-
Visceral leishmaniasis	84.2 (66.6 to 106.6)	113.7 (94.1 to 140.9)	35.1 (17.1 to 54.9)	14.4 (-0.4 to 30.5)
Moderate visceral leishmaniasis	63.2 (50.0 to 79.9)	85.3 (70.6 to 105.7)	35.1 (17.1 to 54.9)	14.4 (-0.4 to 30.5)
Severe visceral leishmaniasis	21.1 (16.7 to 26.6)	28.4 (23.5 to 35.2)	35.1 (17.1 to 54.9)	14.4 (-0.4 to 30.5)
Cutaneous and mucocutaneous leishmaniasis	1,424.0 (1,213.6 to 1,692.5)	3,914.8 (3,300.4 to 4,669.6)	174.2 (144.5 to 209.2)	95.3 (75.2 to 119.9)
African trypanosomiasis	69.5 (31.0 to 138.3)	19.7 (10.6 to 34.3)	-71.1 (-75.3 to -65.9)	-79.5 (-82.4 to -75.8)
Disfigurement due to African trypanosomiasis	35.7 (16.4 to 70.5)	10.3 (5.8 to 17.6)	-70.5 (-75.0 to -64.9)	-79.1 (-82.3 to -75.1)
Severe motor plus cognitive impairments due to African trypanosomiasis	33.8 (14.6 to 67.8)	9.4 (4.9 to 16.6)	-71.7 (-75.5 to -66.8)	-79.9 (-82.6 to -76.4)
Schistosomiasis	219,166.9 (196,779.3 to 240,732.7)	290,627.9 (252,098.7 to 337,576.1)	30.9 (22.9 to 51.9)	-3.7 (-9.7 to 11.8)
Mild schistosomiasis	118,901.4 (110,948.9 to 126,954.0)	150,984.4 (137,298.4 to 169,292.8)	25.8 (16.9 to 40.3)	-9.4 (-16.0 to 1.3)
Mild diarrhea due to schistosomiasis	164.6 (68.2 to 352.2)	248.3 (92.4 to 557.4)	53.6 (2.6 to 79.8)	17.0 (-22.8 to 37.4)
Hematemesis due to schistosomiasis	4.1 (3.5 to 4.7)	7.2 (6.2 to 8.3)	76.9 (71.1 to 81.4)	17.4 (7.0 to 27.1)
Hepatomegaly due to schistosomiasis	9,142.4 (7,411.5 to 11,263.8)	16,638.2 (13,398.5 to 20,539.1)	81.9 (75.0 to 87.8)	34.1 (27.1 to 41.2)
Ascites due to schistosomiasis	289.9 (250.2 to 333.2)	512.0 (444.5 to 586.7)	76.6 (70.9 to 81.1)	17.2 (6.8 to 26.8)
Dysuria due to schistosomiasis	6,145.0 (3,775.4 to 9,496.9)	7,715.7 (3,956.4 to 13,876.7)	21.3 (-7.4 to 74.6)	-7.6 (-29.4 to 32.0)
Bladder pathology due to schistosomiasis	59,252.4 (47,923.4 to 70,890.8)	79,200.1 (58,321.6 to 109,537.6)	30.1 (15.7 to 76.1)	-1.2 (-12.8 to 34.3)
Hydronephrosis due to schistosomiasis	10,791.3 (9,043.9 to 12,613.1)	14,684.1 (11,301.7 to 19,636.4)	32.2 (18.9 to 77.8)	0.5 (-10.0 to 34.0)
Mild anemia due to schistosomiasis	6,490.3 (6,313.2 to 6,835.0)	9,548.4 (9,149.3 to 10,554.2)	46.3 (37.7 to 63.1)	5.8 (-0.2 to 17.7)

Appendix Table G.1: Prevalence numbers and age-standardized rates with percent change between 1990 and 2013 for all causes and sequelae (statistically significant % change shown in bold)

	Prevalent cases 1990 (thousands)	Prevalent cases 2013 (thousands)	% change prevalence, 1990 to 2013	% change age-standardized prevalence, 1990 to 2013
Moderate anemia due to schistosomiasis	7,257.0 (6,818.8 to 7,433.3)	10,151.8 (9,225.2 to 10,566.2)	40.3 (26.8 to 50.6)	7.8 (-2.5 to 16.0)
Severe anemia due to schistosomiasis	728.5 (652.1 to 780.3)	937.5 (866.8 to 1,021.1)	28.0 (16.5 to 46.2)	0.1 (-8.8 to 13.9)
Cysticercosis	1,387.6 (1,221.2 to 1,570.6)	1,030.8 (901.4 to 1,185.6)	-26.3 (-37.3 to -10.0)	-50.2 (-57.5 to -39.0)
Cystic echinococcosis	1,002.3 (949.1 to 1,060.4)	849.2 (822.5 to 893.2)	-15.4 (-17.0 to -12.9)	-42.4 (-43.5 to -40.8)
Abdominal problems due to cystic echinococcosis	810.3 (750.3 to 870.8)	686.7 (644.7 to 734.7)	-15.4 (-17.0 to -12.9)	-42.4 (-43.5 to -40.8)
Chronic respiratory disease due to cystic echinococcosis	183.8 (147.1 to 221.8)	155.7 (125.6 to 187.2)	-15.4 (-17.0 to -12.9)	-42.4 (-43.5 to -40.8)
Epilepsy due to echinococcosis	8.2 (2.4 to 18.1)	6.8 (1.9 to 14.9)	-18.1 (-23.5 to -11.9)	-44.2 (-47.8 to -40.3)
Lymphatic filariasis	64,448.9 (57,555.6 to 73,112.5)	43,850.0 (36,940.8 to 52,905.8)	-32.1 (-39.1 to -24.7)	-53.3 (-58.0 to -48.4)
Prevalence of detectable microfilaria due to lymphatic filariasis	47,269.3 (45,536.4 to 49,187.2)	25,462.8 (22,796.9 to 28,356.7)	-46.2 (-52.2 to -39.8)	-62.1 (-66.2 to -57.5)
Lymphedema due to lymphatic filariasis	6,489.3 (4,124.0 to 9,035.9)	9,153.7 (5,854.0 to 12,873.3)	41.0 (35.0 to 46.7)	-9.9 (-13.8 to -6.1)
Hydrocele due to lymphatic filariasis	10,690.3 (4,560.3 to 18,875.8)	9,233.4 (3,984.4 to 17,116.2)	-13.3 (-38.4 to 13.3)	-44.8 (-60.7 to -28.4)
Onchocerciasis	24,602.8 (16,696.9 to 37,280.3)	16,956.4 (11,477.5 to 26,789.4)	-31.2 (-39.8 to -21.9)	-51.5 (-57.6 to -45.3)
Asymptomatic onchocerciasis	7,633.6 (1,132.5 to 18,734.5)	3,163.1 (36.8 to 11,410.4)	-65.9 (-97.3 to -38.1)	-75.5 (-98.1 to -54.8)
Mild skin disease due to onchocerciasis	1,702.2 (661.5 to 2,794.6)	1,503.7 (457.1 to 2,673.4)	-13.7 (-35.1 to 9.1)	-31.0 (-46.9 to -14.2)
Mild skin disease without itch due to onchocerciasis	5,782.3 (3,049.7 to 9,425.5)	5,360.4 (2,396.4 to 9,525.6)	-9.0 (-22.4 to 3.5)	-34.6 (-45.6 to -25.0)
Moderate skin disease due to onchocerciasis	5,197.5 (2,647.3 to 8,327.2)	3,898.6 (1,609.5 to 6,871.9)	-27.3 (-44.3 to -3.9)	-50.1 (-62.7 to -33.3)
Severe skin disease due to onchocerciasis	2,328.0 (792.1 to 4,061.7)	1,800.5 (477.8 to 3,354.8)	-23.5 (-40.6 to -11.2)	-47.5 (-60.0 to -37.1)
Severe skin disease without itch due to onchocerciasis	52.8 (4.9 to 116.2)	45.5 (4.3 to 102.4)	-13.3 (-23.5 to -7.3)	-48.8 (-54.4 to -39.2)
Moderate vision impairment due to onchocerciasis	1,374.2 (1,038.6 to 1,769.6)	857.1 (477.0 to 1,350.0)	-38.8 (-54.4 to -22.4)	-62.4 (-71.8 to -52.1)
Severe vision impairment due to onchocerciasis	226.4 (168.3 to 290.6)	142.6 (81.1 to 226.2)	-38.3 (-53.8 to -20.3)	-62.6 (-72.2 to -51.7)
Blindness due to onchocerciasis	305.8 (221.4 to 415.9)	184.9 (105.2 to 295.4)	-40.8 (-54.9 to -25.8)	-64.9 (-73.3 to -55.9)
Trachoma	3,980.6 (3,147.2 to 4,929.1)	2,428.8 (1,924.2 to 2,981.2)	-39.2 (-46.3 to -30.1)	-65.4 (-69.5 to -60.3)
Moderate vision impairment due to trachoma	2,778.2 (2,167.2 to 3,484.5)	1,660.0 (1,300.3 to 2,040.4)	-40.5 (-49.1 to -28.9)	-66.1 (-71.2 to -59.6)
Severe vision impairment due to trachoma	543.9 (427.3 to 676.4)	330.0 (258.0 to 408.8)	-39.2 (-47.9 to -30.6)	-65.4 (-70.5 to -60.6)
Blindness due to trachoma	658.5 (500.2 to 832.7)	438.9 (334.1 to 553.1)	-33.5 (-41.4 to -23.0)	-62.5 (-66.9 to -57.0)
Dengue	490.3 (179.4 to 1,099.7)	3,485.5 (1,283.7 to 7,818.6)	610.9 (606.3 to 615.5)	447.3 (443.6 to 450.9)

Hirsutism and secondary infertility due to polycystic ovarian syndrome	1,583.9 (827.3 to 2,553.0)	2,426.5 (1,264.4 to 3,938.9)	52.8 (43.7 to 63.6)	3.6 (-0.2 to 8.7)
Secondary infertility due to polycystic ovarian syndrome	6,644.4 (5,881.4 to 7,455.1)	10,177.9 (8,989.5 to 11,445.3)	53.0 (47.8 to 58.5)	3.6 (0.2 to 7.5)
Female infertility due to other causes	21,937.8 (19,637.7 to 24,037.5)	34,678.6 (31,103.9 to 38,009.3)	58.3 (44.8 to 72.4)	10.7 (1.7 to 20.3)
Idiopathic primary female infertility	5,067.7 (4,261.9 to 6,027.2)	7,213.9 (5,767.0 to 8,541.4)	43.0 (12.3 to 75.3)	12.9 (-11.6 to 38.1)
Idiopathic secondary female infertility	16,870.1 (14,874.6 to 18,585.4)	27,464.7 (24,634.3 to 30,139.4)	62.4 (48.4 to 79.6)	9.8 (0.7 to 21.2)
Endometriosis	9,899.0 (9,601.4 to 10,214.1)	14,661.2 (14,230.8 to 15,094.4)	47.9 (41.9 to 53.5)	-1.6 (-5.6 to 2.1)
Asymptomatic endometriosis	2,873.9 (2,082.2 to 3,682.8)	4,253.7 (3,079.0 to 5,484.3)	47.8 (41.7 to 53.3)	-1.8 (-5.7 to 1.9)
Mild abdominal pain due to endometriosis	540.7 (356.9 to 755.7)	800.3 (526.7 to 1,120.4)	47.8 (41.7 to 53.3)	-1.8 (-5.7 to 1.9)
Moderate abdominal pain due to endometriosis	4,889.7 (3,894.2 to 5,769.0)	7,236.3 (5,743.8 to 8,598.9)	47.8 (41.7 to 53.3)	-1.8 (-5.7 to 1.9)
Severe endometriosis	1,105.1 (764.3 to 1,485.2)	1,635.3 (1,129.1 to 2,175.9)	47.8 (41.7 to 53.3)	-1.8 (-5.7 to 1.9)
Primary infertility due to endometriosis	63.4 (41.9 to 90.9)	95.9 (63.5 to 138.1)	51.0 (41.8 to 61.7)	5.2 (-1.2 to 12.6)
Mild abdominal pain and primary infertility due to endometriosis	12.1 (7.6 to 17.4)	18.2 (11.3 to 26.2)	51.0 (41.8 to 61.7)	5.2 (-1.2 to 12.6)
Moderate abdominal pain and primary infertility due to endometriosis	109.0 (73.2 to 151.3)	164.9 (110.6 to 228.1)	51.0 (41.8 to 61.7)	5.2 (-1.2 to 12.6)
Severe abdominal pain and primary infertility due to endometriosis	24.4 (16.0 to 34.8)	36.9 (24.1 to 53.1)	51.0 (41.8 to 61.7)	5.2 (-1.2 to 12.6)
Secondary infertility due to endometriosis	85.2 (56.7 to 120.3)	127.4 (85.2 to 179.0)	49.3 (42.4 to 56.5)	-0.5 (-5.1 to 4.5)
Mild abdominal pain and secondary infertility due to endometriosis	16.2 (10.2 to 23.3)	24.2 (15.3 to 34.7)	49.3 (42.4 to 56.5)	-0.5 (-5.1 to 4.5)
Moderate abdominal pain and secondary infertility due to endometriosis	146.5 (98.8 to 202.7)	219.0 (148.1 to 301.8)	49.3 (42.4 to 56.5)	-0.5 (-5.1 to 4.5)
Severe abdominal pain and secondary infertility due to endometriosis	32.8 (21.4 to 45.9)	49.0 (32.4 to 69.3)	49.3 (42.4 to 56.5)	-0.5 (-5.1 to 4.5)
Genital prolapse	218,568.9 (214,601.1 to 222,616.2)	343,707.8 (336,958.8 to 350,327.4)	57.0 (53.0 to 61.5)	-0.9 (-3.3 to 1.7)
Asymptomatic genital prolapse	176,481.6 (158,761.1 to 191,001.6)	277,528.3 (249,622.7 to 301,180.7)	57.0 (53.0 to 61.5)	-0.9 (-3.3 to 1.7)
Abdominal pain due to genital prolapse	15,737.7 (4,017.4 to 32,704.3)	24,742.6 (6,281.4 to 51,494.0)	57.0 (53.0 to 61.5)	-0.9 (-3.3 to 1.7)
Stress incontinence due to genital prolapse	24,178.3 (14,909.2 to 34,945.8)	38,020.5 (23,494.6 to 55,537.8)	57.0 (53.0 to 61.5)	-0.9 (-3.3 to 1.7)
Abdominal pain and stress incontinence due to genital prolapse	2,171.3 (481.4 to 5,024.0)	3,416.4 (753.1 to 7,881.8)	57.0 (53.0 to 61.5)	-0.9 (-3.3 to 1.7)
Premenstrual syndrome	196,514.0 (185,655.6 to 207,308.9)	302,731.7 (284,373.1 to 321,829.6)	53.8 (40.3 to 67.9)	9.2 (-0.1 to 19.4)
Asymptomatic premenstrual syndrome	174,715.5 (164,239.7 to 185,275.3)	269,148.3 (251,882.0 to 287,500.8)	53.8 (40.3 to 67.9)	9.2 (-0.1 to 19.4)
Abdominal pain and depression due to premenstrual syndrome	7,885.2 (5,764.2 to 10,131.3)	12,147.8 (8,866.8 to 15,724.1)	53.8 (40.3 to 67.9)	9.2 (-0.1 to 19.4)
Abdominal pain due to premenstrual syndrome	11,166.7 (8,058.6 to 14,850.8)	17,203.0 (12,399.1 to 22,971.0)	53.8 (40.3 to 67.9)	9.2 (-0.1 to 19.4)
Depression due to premenstrual syndrome	2,746.6 (840.8 to 5,678.6)	4,232.6 (1,291.1 to 8,719.6)	53.8 (40.3 to 67.9)	9.2 (-0.1 to 19.4)
Other gynecological diseases	17,916.7 (16,719.9 to 19,057.9)	20,758.0 (19,699.4 to 21,792.8)	15.7 (6.9 to 26.4)	-19.3 (-25.6 to -11.8)
Asymptomatic other gynecological disorders	812.6 (730.5 to 897.2)	1,165.3 (1,048.7 to 1,301.3)	43.2 (33.8 to 52.4)	-8.1 (-14.0 to -2.1)
Mild other gynecological disorders	1,088.1 (964.3 to 1,203.1)	1,560.4 (1,391.8 to 1,735.3)	43.2 (33.8 to 52.4)	-8.1 (-14.0 to -2.1)
Moderate other gynecological disorders	311.3 (201.1 to 439.4)	446.3 (289.0 to 629.1)	43.2 (33.8 to 52.4)	-8.1 (-14.0 to -2.1)
Severe other gynecological disorders	156.9 (110.7 to 211.2)	225.0 (159.9 to 304.1)	43.2 (33.8 to 52.4)	-8.1 (-14.0 to -2.1)
Mild anemia due to other gynecological diseases	7,882.4 (7,417.4 to 9,078.5)	9,827.1 (9,281.2 to 10,877.3)	25.3 (4.4 to 39.1)	-11.8 (-27.0 to -2.1)
Moderate anemia due to other gynecological diseases	7,069.3 (5,762.7 to 7,615.1)	7,101.9 (6,083.8 to 7,626.2)	-0.3 (-14.7 to 26.1)	-29.1 (-39.5 to -9.8)
Severe anemia due to other gynecological diseases	596.2 (508.3 to 626.2)	432.1 (326.1 to 472.4)	-26.9 (-45.9 to -12.3)	-48.3 (-61.7 to -39.1)
Hemoglobinopathies and hemolytic anemias	-	-	-	-
Thalassemias	683.0 (606.3 to 769.4)	766.7 (691.8 to 849.8)	11.6 (8.5 to 19.1)	-2.5 (-5.1 to 3.8)
Beta-thalassemia major, with mild anemia	14.6 (11.5 to 17.4)	16.8 (13.4 to 20.1)	14.8 (-10.2 to 52.6)	-5.0 (-25.6 to 25.9)
Beta-thalassemia major, with moderate anemia	181.2 (154.2 to 203.4)	207.9 (177.1 to 232.8)	14.9 (0.9 to 30.6)	4.8 (-8.0 to 19.0)
Beta-thalassemia major, with severe anemia	74.0 (59.6 to 88.0)	74.1 (58.8 to 91.4)	-0.3 (-23.8 to 27.9)	-12.1 (-32.5 to 12.1)

Appendix Table G.1: Prevalence numbers and age-standardized rates with percent change between 1990 and 2013 for all causes and sequelae (statistically significant % change shown in bold)

	Prevalent cases 1990 (thousands)	Prevalent cases 2013 (thousands)	% change prevalence, 1990 to 2013	% change age-standardized prevalence, 1990 to 2013
Beta-thalassemia major, severe infection with severe anemia	3.1 (1.0 to 6.3)	3.5 (1.2 to 7.0)	12.8 (6.5 to 18.3)	0.9 (-4.8 to 5.7)
Hemoglobin E/beta-thalassemia, with mild anemia	12.8 (8.2 to 15.9)	12.0 (7.4 to 15.7)	-6.5 (-45.3 to 64.3)	-25.8 (-56.3 to 28.9)
Hemoglobin E/beta-thalassemia, with moderate anemia	133.3 (117.1 to 146.1)	142.3 (120.5 to 159.3)	7.1 (-9.3 to 21.8)	-4.6 (-19.5 to 8.4)
Hemoglobin E/beta-thalassemia, with severe anemia	40.1 (34.0 to 49.9)	44.5 (35.0 to 58.6)	9.6 (-16.3 to 51.8)	-5.6 (-27.6 to 29.8)
Hemoglobin E/beta-thalassemia, severe infection with severe anemia	2.0 (0.7 to 3.9)	2.2 (0.8 to 4.3)	12.4 (8.4 to 16.8)	-2.1 (-5.4 to 1.6)
Hemoglobin H disease, with mild anemia	3.3 (1.7 to 4.8)	2.5 (1.3 to 3.4)	-26.2 (-62.7 to 52.8)	-38.6 (-68.7 to 24.8)
Hemoglobin H disease, with moderate anemia	33.5 (29.1 to 37.5)	25.2 (19.7 to 29.4)	-24.0 (-40.5 to -11.1)	-31.0 (-46.0 to -19.1)
Hemoglobin H disease, with severe anemia	11.0 (7.6 to 14.8)	12.8 (9.1 to 17.6)	15.0 (-13.3 to 60.6)	-0.2 (-24.6 to 40.1)
Hemoglobin H disease, severe infection with severe anemia	0.5 (0.2 to 1.1)	0.5 (0.2 to 1.0)	-8.1 (-12.9 to -2.2)	-18.5 (-22.8 to -13.6)
Mild heart failure due to thalassemias	23.9 (14.4 to 35.0)	29.3 (18.4 to 42.6)	20.7 (0.4 to 66.4)	-2.1 (-18.0 to 31.8)
Moderate heart failure due to thalassemias	19.4 (11.7 to 28.3)	23.8 (15.4 to 33.3)	20.7 (0.4 to 66.4)	-2.1 (-18.0 to 31.8)
Severe heart failure due to thalassemias	52.8 (34.7 to 71.2)	64.6 (46.2 to 81.4)	20.7 (0.4 to 66.4)	-2.1 (-18.0 to 31.8)
Hemoglobin H disease, without anemia	7.2 (2.8 to 13.8)	10.1 (4.9 to 17.7)	44.3 (-28.0 to 186.2)	19.7 (-37.3 to 134.5)
Beta-thalassemia major, without anemia	49.4 (8.8 to 110.1)	60.3 (19.9 to 112.9)	23.5 (-14.9 to 147.5)	7.5 (-25.5 to 101.4)
Hemoglobin E/Beta-thalassemia, without anemia	21.1 (6.4 to 41.2)	34.5 (16.9 to 58.8)	64.5 (-12.4 to 276.8)	35.3 (-25.7 to 196.9)
Thalassemia trait	151,186.5 (138,147.1 to 169,165.6)	207,561.8 (192,411.3 to 228,437.6)	37.3 (34.7 to 39.6)	2.7 (0.5 to 4.5)
Asymptomatic B-thalassemia trait	52,482.9 (39,757.2 to 69,997.3)	71,598.7 (56,811.6 to 91,872.3)	36.5 (29.5 to 45.6)	-1.1 (-5.8 to 5.5)

Severe motor plus cognitive impairments due to severe neural tube defects	293.2 (244.3 to 340.3)	477.7 (395.5 to 556.5)	62.7 (55.4 to 70.5)	28.6 (22.6 to 34.8)
Severe motor impairment with incontinence due to severe neural tube defects	110.1 (69.6 to 156.1)	179.4 (114.5 to 251.6)	62.7 (55.4 to 70.5)	28.6 (22.6 to 34.8)
Congenital heart anomalies	18,199.0 (17,593.7 to 18,865.3)	34,315.9 (33,178.0 to 35,691.2)	88.0 (80.3 to 98.5)	40.0 (34.5 to 47.8)
Asymptomatic less severe congenital heart anomalies	7,547.6 (6,942.5 to 8,161.1)	13,965.4 (12,852.3 to 15,123.8)	84.5 (76.4 to 95.5)	37.0 (30.9 to 45.2)
Symptomatic less severe congenital heart anomalies	9,205.2 (8,560.8 to 9,834.5)	17,032.1 (15,821.5 to 18,325.1)	84.5 (76.4 to 95.5)	37.0 (30.9 to 45.2)
Severe congenital heart anomalies	923.7 (869.2 to 1,000.8)	2,598.7 (2,520.0 to 2,704.8)	182.1 (159.0 to 200.9)	108.8 (91.6 to 123.1)
Critical congenital heart anomalies	27.9 (25.4 to 30.8)	98.9 (93.6 to 104.9)	254.4 (215.0 to 297.1)	197.6 (164.5 to 233.7)
Mild heart failure due to congenital heart anomalies	121.1 (80.0 to 163.8)	152.0 (98.2 to 206.7)	25.7 (11.2 to 38.4)	7.0 (-5.1 to 17.0)
Moderate heart failure due to congenital heart anomalies	100.9 (72.0 to 133.3)	126.6 (90.8 to 167.9)	25.7 (11.2 to 38.4)	7.0 (-5.1 to 17.0)
Severe heart failure due to congenital heart anomalies	272.6 (228.2 to 317.5)	342.2 (286.2 to 399.5)	25.7 (11.2 to 38.4)	7.0 (-5.1 to 17.0)
Orofacial clefts	2,978.0 (2,863.3 to 3,082.2)	5,807.6 (5,621.9 to 5,988.1)	94.4 (86.1 to 105.9)	47.9 (41.2 to 56.6)
Asymptomatic orofacial clefts	2,356.0 (2,265.3 to 2,442.6)	4,705.1 (4,559.0 to 4,846.5)	99.1 (90.7 to 110.8)	50.7 (44.0 to 59.6)
Disfigurement level 1 due to orofacial clefts	207.3 (198.9 to 214.8)	367.5 (352.0 to 383.5)	76.9 (67.1 to 88.5)	37.2 (29.5 to 46.3)
Disfigurement level 2 due to orofacial clefts	207.3 (199.4 to 215.0)	367.4 (351.9 to 382.5)	77.0 (67.0 to 88.3)	37.3 (29.6 to 46.1)
Disfigurement level 2 and speech problems due to orofacial clefts	207.4 (198.7 to 215.0)	367.6 (351.9 to 382.7)	77.0 (67.1 to 88.5)	37.3 (29.6 to 46.1)
Down syndrome	4,752.1 (4,560.8 to 4,959.0)	8,538.5 (8,185.7 to 8,897.8)	79.5 (70.1 to 88.2)	32.8 (26.0 to 39.2)
Asymptomatic Down syndrome	124.2 (73.0 to 202.1)	208.9 (129.4 to 330.3)	68.7 (57.3 to 81.9)	29.3 (22.4 to 36.1)
Intellectual disability due to Down syndrome	2,093.2 (1,469.4 to 2,630.7)	3,368.3 (2,362.5 to 4,225.0)	61.0 (51.8 to 70.1)	26.6 (19.9 to 33.0)
Intellectual disability with congenital heart disease due to Down syndrome	1,559.5 (1,027.2 to 2,161.6)	2,505.6 (1,699.2 to 3,404.2)	60.7 (51.4 to 70.1)	26.5 (19.7 to 33.3)
Intellectual disability with dementia due to Down syndrome	511.5 (359.6 to 649.8)	1,331.1 (940.0 to 1,682.0)	160.6 (146.5 to 172.2)	50.6 (42.6 to 57.7)
Intellectual disability with congenital heart disease and dementia due to Down syndrome	374.0 (232.4 to 508.2)	973.6 (610.2 to 1,314.0)	160.5 (147.0 to 173.8)	50.5 (42.5 to 58.4)
Isolated congenital heart disease due to Down syndrome	89.7 (52.3 to 147.4)	150.9 (92.6 to 234.3)	68.8 (56.7 to 82.2)	29.3 (21.9 to 36.3)
Tumer syndrome	170.1 (161.5 to 178.5)	257.5 (246.6 to 271.2)	51.2 (42.6 to 62.3)	14.8 (8.4 to 23.3)
Asymptomatic Tumer syndrome	54.8 (51.8 to 58.1)	78.2 (74.3 to 83.0)	42.6 (33.9 to 53.3)	17.1 (10.1 to 25.7)
Congenital heart disease due to Tumer syndrome	16.2 (14.4 to 18.0)	23.1 (20.9 to 25.4)	42.6 (33.5 to 52.9)	17.0 (10.0 to 25.7)
Primary infertility due to Tumer syndrome	80.7 (76.9 to 84.5)	127.1 (122.2 to 133.7)	57.2 (48.7 to 68.8)	13.3 (7.2 to 21.6)
Congenital heart disease with infertility due to Tumer syndrome	18.4 (16.1 to 20.7)	29.0 (25.4 to 32.7)	57.2 (48.7 to 68.8)	13.3 (7.2 to 21.6)
Klinefelter syndrome	152.0 (143.9 to 159.2)	216.3 (207.1 to 226.7)	42.0 (33.2 to 52.7)	6.5 (0.0 to 14.5)

Appendix Table G.1: Prevalence numbers and age-standardized rates with percent change between 1990 and 2013 for all causes and sequelae (statistically significant % change shown in bold)

	Prevalent cases 1990 (thousands)	Prevalent cases 2013 (thousands)	% change prevalence, 1990 to 2013	% change age-standardized prevalence, 1990 to 2013
Asymptomatic Klinefelter syndrome	70.3 (63.8 to 76.3)	95.0 (87.5 to 102.8)	34.8 (26.4 to 45.5)	8.0 (1.4 to 16.2)
Borderline intellectual disability due to Klinefelter syndrome	16.8 (11.8 to 22.3)	22.7 (16.4 to 29.5)	35.3 (23.8 to 49.3)	8.1 (1.1 to 16.3)
Borderline intellectual disability with infertility due to Klinefelter syndrome	12.0 (7.5 to 17.1)	18.3 (11.3 to 25.6)	51.9 (42.5 to 63.4)	4.5 (-1.9 to 12.4)
Mild intellectual disability due to Klinefelter syndrome	1.4 (0.9 to 2.1)	1.9 (1.2 to 2.7)	35.1 (22.2 to 51.1)	8.0 (1.1 to 16.4)
Mild intellectual disability with infertility due to Klinefelter syndrome	1.0 (0.6 to 1.7)	1.5 (0.9 to 2.5)	51.9 (42.5 to 63.4)	4.5 (-1.9 to 12.4)
Primary infertility due to Klinefelter syndrome	50.4 (45.0 to 55.8)	76.7 (69.3 to 84.3)	51.9 (42.5 to 63.4)	4.5 (-1.9 to 12.4)
Chromosomal unbalanced rearrangements	6,683.3 (6,415.3 to 6,919.1)	11,649.3 (11,154.1 to 12,235.1)	74.0 (66.0 to 83.0)	27.5 (21.7 to 34.0)
Asymptomatic chromosomal unbalanced rearrangements	171.0 (103.1 to 269.0)	280.2 (179.0 to 422.9)	64.2 (54.2 to 77.3)	24.7 (18.7 to 31.5)
Intellectual disability due to chromosomal unbalanced rearrangements	2,918.3 (1,997.3 to 3,682.6)	4,564.5 (3,189.1 to 5,710.5)	56.2 (48.0 to 66.3)	22.3 (16.2 to 29.3)
Intellectual disability with congenital heart disease due to chromosomal unbalanced rearrangements	2,127.0 (1,385.6 to 3,062.7)	3,328.2 (2,206.4 to 4,659.6)	56.5 (47.8 to 65.9)	22.4 (16.4 to 29.5)
Intellectual disability with dementia due to chromosomal unbalanced rearrangements	772.7 (529.3 to 1,001.4)	1,884.5 (1,295.0 to 2,458.8)	143.8 (132.9 to 155.8)	40.8 (34.7 to 47.7)
Intellectual disability with congenital heart disease and dementia due to chromosomal unbalanced rearrangements	568.7 (367.1 to 779.5)	1,386.5 (902.6 to 1,895.8)	143.4 (132.7 to 156.7)	40.7 (34.5 to 48.3)
Isolated congenital heart disease due to chromosomal unbalanced rearrangements	125.5 (74.6 to 201.1)	205.3 (128.3 to 318.1)	64.1 (53.4 to 76.5)	24.7 (18.6 to 31.6)
Other congenital anomalies	20,979.3 (18,202.1 to 23,437.9)	25,840.0 (22,170.5 to 29,283.1)	22.9 (17.2 to 28.7)	-10.6 (-14.7 to -6.5)
Mild hearing loss due to other congenital anomalies	4,260.3 (3,769.5 to 4,637.3)	6,049.0 (5,388.5 to 6,643.4)	41.6 (35.0 to 50.1)	-1.8 (-6.5 to 3.8)
Mild hearing loss with ringing due to other congenital anomalies	1,126.8 (990.5 to 1,232.1)	1,600.0 (1,419.0 to 1,764.6)	41.7 (34.9 to 49.9)	-1.8 (-6.6 to 3.8)
Moderate hearing loss due to other congenital anomalies	3,624.7 (3,009.5 to 4,247.4)	4,743.7 (3,776.9 to 5,726.7)	29.8 (10.2 to 52.6)	-6.8 (-20.8 to 10.0)
Moderate hearing loss with ringing due to other congenital anomalies	1,570.0 (1,292.0 to 1,848.3)	2,054.9 (1,611.2 to 2,485.9)	30.0 (10.4 to 53.0)	-6.7 (-20.8 to 10.0)
Moderately severe hearing loss due to other congenital anomalies	2,835.1 (2,058.5 to 3,556.6)	3,129.4 (2,237.8 to 3,981.1)	10.3 (-11.6 to 38.1)	-18.2 (-34.5 to 1.9)
Moderately severe hearing loss with ringing due to other congenital anomalies	1,361.2 (990.4 to 1,732.7)	1,502.5 (1,074.9 to 1,923.2)	10.2 (-11.5 to 37.8)	-18.3 (-34.5 to 2.0)
Severe hearing loss with ringing due to other congenital anomalies	1,162.9 (910.7 to 1,453.8)	1,389.9 (1,116.5 to 1,715.7)	19.4 (4.7 to 35.2)	-11.7 (-22.0 to -0.5)
Severe hearing loss due to other congenital anomalies	2,053.1 (1,624.9 to 2,541.2)	2,454.2 (2,007.4 to 3,049.2)	19.5 (5.2 to 35.6)	-11.7 (-22.0 to -0.4)
Profound hearing loss due to other congenital anomalies	506.2 (361.2 to 682.5)	444.4 (303.8 to 592.4)	-12.0 (-23.2 to -2.8)	-24.9 (-34.5 to -17.5)
Profound hearing loss with ringing due to other congenital anomalies	895.5 (679.8 to 1,152.3)	786.8 (565.7 to 1,018.8)	-12.0 (-23.2 to -3.0)	-24.8 (-34.4 to -17.7)
Complete hearing loss due to other congenital anomalies	721.5 (531.3 to 955.1)	768.1 (576.2 to 1,022.9)	6.3 (-0.3 to 13.4)	-22.6 (-26.7 to -18.5)
Complete hearing loss with ringing due to other congenital anomalies	862.1 (668.2 to 1,104.1)	917.1 (714.3 to 1,181.2)	6.4 (0.1 to 12.7)	-22.7 (-26.8 to -18.5)
Other congenital anomalies	-	-	-	-
Skin and subcutaneous diseases	-	-	-	-
Dermatitis	240,442.0 (208,169.8 to 274,870.0)	333,785.4 (289,927.3 to 381,312.4)	38.7 (36.2 to 41.1)	-1.7 (-2.4 to -0.9)
Mild eczema	39,245.9 (32,059.4 to 47,263.2)	50,890.5 (41,525.4 to 61,464.6)	29.6 (26.3 to 32.4)	0.4 (-0.8 to 2.0)

Severe motor plus cognitive impairment with blindness due to hemolytic disease and other neonatal jaundice	37.7 (25.2 to 51.7)	74.8 (51.2 to 101.8)	95.2 (53.3 to 181.2)	52.6 (20.5 to 119.2)
Severe motor plus cognitive impairment with epilepsy due to hemolytic disease and other neonatal jaundice	212.1 (150.4 to 277.0)	382.1 (270.7 to 503.3)	78.1 (41.0 to 144.5)	39.2 (10.6 to 89.0)
Severe motor plus cognitive impairment with blindness and epilepsy due to hemolytic disease and other neonatal jaundice	22.7 (16.0 to 30.2)	41.2 (29.1 to 53.8)	79.2 (42.6 to 149.1)	39.9 (11.6 to 93.4)
Other neonatal disorders	858.1 (573.6 to 1,219.0)	1,957.6 (1,334.4 to 2,698.5)	128.8 (82.2 to 189.1)	80.3 (43.8 to 126.6)
Nutritional deficiencies	46,100.7 (30,899.5 to 65,931.0)	41,765.3 (27,678.6 to 60,351.7)	-9.4 (-12.0 to -7.0)	-26.1 (-27.8 to -24.5)
Protein-energy malnutrition	2,948.7 (1,748.3 to 4,389.3)	2,574.3 (1,588.3 to 3,920.3)	-13.0 (-34.9 to 16.9)	-16.3 (-37.0 to 12.3)
Kwashiorkor due to protein-energy malnutrition	2.8 (1.3 to 5.0)	1.8 (0.9 to 3.3)	-35.8 (-49.6 to -18.0)	-37.7 (-51.1 to -20.3)
Marasmus due to protein-energy malnutrition	164.6 (83.4 to 286.1)	150.7 (75.5 to 255.0)	-8.6 (-23.0 to 6.6)	-22.8 (-34.2 to -11.4)
Severe wasting due to protein-energy malnutrition	2,781.4 (1,660.6 to 4,204.7)	2,421.9 (1,482.8 to 3,718.1)	-13.3 (-36.1 to 18.7)	-15.8 (-38.0 to 15.4)
Iodine deficiency	2,341.8 (1,457.4 to 3,669.6)	2,075.0 (1,294.6 to 3,291.9)	-11.4 (-17.1 to -5.4)	-36.7 (-40.8 to -32.3)
Visible goiter without symptoms	709.6 (479.5 to 1,006.6)	629.6 (425.9 to 901.2)	-11.3 (-17.1 to -5.1)	-36.7 (-40.9 to -32.2)
Visible goiter without heart failure due to iodine deficiency	1,257.2 (601.1 to 2,324.0)	1,114.6 (530.6 to 2,077.7)	-11.4 (-16.7 to -5.4)	-36.8 (-40.6 to -32.4)
Visible goiter with mild heart failure due to iodine deficiency	0.1 (0.0 to 0.1)	0.1 (0.0 to 0.2)	56.0 (5.3 to 175.3)	1.1 (-33.8 to 81.7)
Visible goiter with moderate heart failure due to iodine deficiency	0.1 (0.0 to 0.1)	0.1 (0.1 to 0.2)	56.0 (5.2 to 175.2)	1.1 (-33.8 to 81.8)
Visible goiter with severe heart failure due to iodine deficiency	0.4 (0.2 to 0.7)	0.7 (0.4 to 1.3)	56.0 (5.1 to 175.0)	1.2 (-33.4 to 81.4)

Appendix Table G.2: YLD numbers and age-standardized rates with percent change between 1990 and 2013 for all causes and sequelae (statistically significant % change shown in bold)

	YLDs 1990 (thousands)	YLDs 2013 (thousands)	% change YLDs, 1990 to 2013	% change age-standardized YLDs, 1990 to 2013
Visible goiter with signs and symptoms	364.5 (247.1 to 506.5)	323.5 (215.6 to 451.7)	-11.3 (-17.6 to -4.0)	-36.6 (-41.2 to -31.4)
Severe intellectual disability due to iodine deficiency	6.9 (4.0 to 12.4)	4.4 (2.7 to 7.0)	-33.1 (-64.6 to -2.6)	-35.3 (-65.8 to -5.9)
Profound intellectual disability due to iodine deficiency	3.0 (1.0 to 5.9)	2.0 (0.7 to 3.6)	-32.7 (-63.1 to -3.7)	-35.0 (-64.4 to -7.0)
Vitamin A deficiency	199.3 (129.5 to 293.6)	153.7 (99.0 to 224.9)	-22.9 (-28.7 to -16.9)	-39.1 (-44.1 to -33.5)
Moderate vision impairment loss due to vitamin A deficiency	110.2 (65.1 to 175.4)	90.5 (52.4 to 144.9)	-17.9 (-23.7 to -11.5)	-32.8 (-37.9 to -28.0)
Severe vision impairment loss due to vitamin A deficiency	46.0 (29.5 to 67.0)	35.8 (21.9 to 53.5)	-22.1 (-34.8 to -8.6)	-39.0 (-48.4 to -28.5)
Blindness due to vitamin A deficiency	43.0 (26.5 to 65.7)	27.4 (16.3 to 42.1)	-36.3 (-46.7 to -25.0)	-53.1 (-60.1 to -43.9)
Iron-deficiency anemia	40,078.7 (26,808.5 to 57,971.0)	36,663.5 (24,371.0 to 53,084.7)	-8.6 (-9.8 to -7.1)	-25.8 (-26.7 to -24.9)
Mild iron-deficiency anemia	2,026.9 (725.3 to 4,431.9)	2,198.2 (785.8 to 4,808.6)	8.4 (7.8 to 9.3)	-18.3 (-18.7 to -17.7)
Moderate iron-deficiency anemia	29,764.1 (19,689.2 to 43,266.8)	27,817.1 (18,406.6 to 40,441.9)	-6.5 (-7.2 to -6.0)	-24.0 (-24.6 to -23.6)
Severe iron-deficiency anemia	8,244.6 (5,693.0 to 11,458.1)	6,597.1 (4,523.7 to 9,153.5)	-20.0 (-21.1 to -18.7)	-34.1 (-35.0 to -32.8)
Mild heart failure due to iron-deficiency anemia	3.7 (1.8 to 6.3)	4.4 (2.3 to 7.5)	19.6 (19.8)	-22.3 (-35.2 to -9.9)
Moderate heart failure due to iron-deficiency anemia	5.2 (3.0 to 8.6)	6.2 (3.5 to 10.2)	19.8 (0.3 to 37.0)	-22.3 (-34.9 to -10.6)
Severe heart failure due to iron-deficiency anemia	34.2 (21.3 to 51.9)	40.6 (24.6 to 61.3)	19.1 (0.1 to 35.4)	-22.4 (-35.4 to -11.7)
Other nutritional deficiencies	532.2 (257.2 to 970.3)	298.8 (157.9 to 535.4)	-43.8 (-63.9 to -10.0)	-45.7 (-65.2 to -13.1)
Other communicable, maternal, neonatal, and nutritional diseases	3,238.8 (2,097.5 to 4,867.8)	3,565.4 (2,282.3 to 5,460.0)	9.7 (5.6 to 15.8)	-13.4 (-15.8 to -9.9)
Sexually transmitted diseases excluding HIV	1,001.7 (603.1 to 1,712.5)	1,383.8 (830.1 to 2,404.6)	38.0 (33.1 to 42.5)	-2.6 (-5.6 to 0.5)
Syphilis	57.5 (38.8 to 80.0)	58.4 (39.6 to 81.8)	1.5 (-5.3 to 9.9)	-36.9 (-40.8 to -32.0)
Chlamydial infection	472.4 (298.5 to 751.4)	646.5 (411.0 to 1,019.4)	37.1 (31.0 to 43.3)	0.4 (-4.2 to 4.8)
Asymptomatic chlamydial infection	0.0 (0.0 to 0.0)	0.0 (0.0 to 0.0)	0.0 (0.0 to 0.0)	0.0 (0.0 to 0.0)
Mild chlamydial infection	189.3 (75.3 to 397.5)	250.3 (99.9 to 521.2)	32.5 (28.2 to 36.0)	-3.2 (-6.2 to -0.7)
Epididymo-orchitis due to chlamydial infection	268.0 (176.1 to 384.0)	382.1 (250.3 to 545.2)	42.6 (34.1 to 51.5)	4.7 (-1.3 to 11.3)
Moderate pelvic inflammatory diseases due to chlamydial infection	6.3 (4.2 to 8.8)	5.6 (3.8 to 7.8)	-10.2 (-18.6 to -1.8)	-35.8 (-41.6 to -30.0)
Severe pelvic inflammatory diseases due to chlamydial infection	2.2 (1.5 to 3.2)	2.0 (1.3 to 2.8)	-10.1 (-17.9 to -2.7)	-35.7 (-41.2 to -30.6)
Primary infertility due to chlamydial infection	3.3 (1.4 to 7.0)	3.3 (1.4 to 6.9)	-0.2 (-8.3 to 11.5)	-31.8 (-37.4 to -24.0)
Secondary infertility due to chlamydial infection	3.3 (1.2 to 7.1)	3.2 (1.2 to 6.9)	-1.3 (-9.1 to 8.6)	-35.6 (-40.7 to -29.5)
Gonococcal infection	157.1 (100.3 to 247.5)	225.4 (144.8 to 344.1)	43.4 (29.1 to 61.0)	7.9 (-2.6 to 20.9)
Asymptomatic gonococcal infection	0.0 (0.0 to 0.0)	0.0 (0.0 to 0.0)	0.0 (0.0 to 0.0)	0.0 (0.0 to 0.0)
Mild gonococcal infection	54.1 (22.1 to 114.1)	76.6 (30.2 to 159.3)	41.5 (30.5 to 53.2)	7.9 (-0.4 to 16.5)
Epididymo-orchitis due to gonococcal infection	84.5 (55.4 to 124.0)	129.0 (83.4 to 184.1)	52.5 (31.3 to 79.5)	16.5 (0.8 to 36.5)
Moderate pelvic inflammatory diseases due to gonococcal infection	7.6 (5.0 to 10.7)	7.9 (5.2 to 11.0)	3.1 (-18.1 to 28.1)	-26.7 (-41.1 to -9.6)
Severe pelvic inflammatory diseases due to gonococcal infection	2.8 (1.8 to 3.9)	2.8 (1.8 to 4.0)	2.3 (-12.0 to 18.4)	-27.2 (-37.3 to -16.0)
Primary infertility due to gonococcal infection	4.1 (1.8 to 8.7)	4.8 (2.0 to 10.2)	16.7 (4.5 to 31.2)	-20.9 (-29.1 to -10.9)
Secondary infertility due to gonococcal infection	3.9 (1.5 to 8.7)	4.3 (1.7 to 9.6)	10.5 (2.5 to 19.9)	-28.1 (-33.2 to -22.1)
Trichomoniasis	78.0 (30.9 to 167.4)	113.9 (45.1 to 242.9)	45.5 (32.3 to 64.1)	4.2 (-4.9 to 16.9)
Asymptomatic trichomoniasis infection	0.0 (0.0 to 0.0)	0.0 (0.0 to 0.0)	0.0 (0.0 to 0.0)	0.0 (0.0 to 0.0)
Acute trichomoniasis infection	88.2 (35.0 to 185.9)	129.1 (51.4 to 276.3)	45.9 (33.5 to 62.7)	4.3 (-4.2 to 15.7)
Genital herpes	213.5 (68.2 to 516.5)	311.6 (98.3 to 748.5)	45.7 (40.8 to 49.6)	-4.8 (-6.8 to -2.6)
Asymptomatic genital herpes	0.0 (0.0 to 0.0)	0.0 (0.0 to 0.0)	0.0 (0.0 to 0.0)	0.0 (0.0 to 0.0)

Metastatic phase of stomach cancer	89.7 (62.5 to 117.5)	108.3 (74.7 to 140.0)	21.0 (12.1 to 29.6)	-30.0 (-35.1 to -25.1)
Terminal phase of stomach cancer	28.5 (20.1 to 36.3)	34.6 (24.4 to 44.2)	21.3 (11.7 to 31.0)	-29.8 (-35.3 to -24.1)
Liver cancer	107.9 (76.6 to 143.6)	190.6 (133.3 to 253.2)	76.9 (55.6 to 102.0)	4.5 (-7.6 to 19.0)

Appendix Table G.2: YLD numbers and age-standardized rates with percent change between 1990 and 2013 for all causes and sequelae (statistically significant % change shown in bold)

	YLDs 1990 (thousands)	YLDs 2013 (thousands)	% change YLDs, 1990 to 2013	% change age-standardized YLDs, 1990 to 2013
Liver cancer due to hepatitis B	39.3 (27.7 to 52.1)	67.0 (46.3 to 89.9)	70.7 (44.5 to 102.0)	2.0 (-13.6 to 20.5)
Diagnosis and primary therapy phase of liver cancer due to hepatitis B	10.8 (7.3 to 15.0)	18.0 (11.7 to 25.2)	67.3 (43.0 to 95.7)	-0.1 (-14.1 to 16.7)
Controlled phase of liver cancer due to hepatitis B	6.9 (3.9 to 10.7)	14.3 (8.6 to 21.7)	108.2 (49.2 to 199.5)	24.8 (-10.1 to 78.1)
Metastatic phase of liver cancer due to hepatitis B	14.5 (9.9 to 19.5)	23.2 (15.5 to 30.8)	60.3 (39.4 to 84.0)	-4.0 (-17.0 to 9.6)
Terminal phase of liver cancer due to hepatitis B	7.1 (5.0 to 9.4)	11.5 (7.8 to 15.0)	60.7 (40.6 to 84.4)	-4.1 (-15.8 to 9.6)
Liver cancer due to hepatitis C	18.1 (12.8 to 24.1)	74.6 (52.6 to 99.9)	310.5 (256.5 to 378.5)	135.7 (106.8 to 174.3)
Diagnosis and primary therapy phase of liver cancer due to hepatitis C	5.0 (3.3 to 7.0)	20.0 (13.5 to 28.0)	302.4 (247.1 to 368.5)	131.2 (100.2 to 167.1)
Controlled phase of liver cancer due to hepatitis C	3.2 (2.0 to 4.9)	16.0 (9.9 to 23.6)	394.7 (277.3 to 547.5)	185.9 (120.6 to 272.3)
Metastatic phase of liver cancer due to hepatitis C	6.7 (4.5 to 9.0)	25.8 (17.6 to 34.5)	286.7 (240.5 to 347.1)	122.0 (97.0 to 155.4)
Terminal phase of liver cancer due to hepatitis C	3.3 (2.2 to 4.3)	12.8 (9.0 to 17.0)	293.1 (246.8 to 350.5)	125.5 (99.4 to 159.0)
Liver cancer due to alcohol use	29.3 (20.7 to 38.6)	29.9 (20.7 to 40.1)	2.0 (-10.3 to 16.3)	-40.4 (-47.6 to -32.1)
Diagnosis and primary therapy phase of liver cancer due to alcohol use	8.0 (5.4 to 11.1)	8.1 (5.3 to 11.4)	0.8 (-11.3 to 14.8)	-41.2 (-48.1 to -33.1)
Controlled phase of liver cancer due to alcohol use	5.2 (3.1 to 7.9)	6.1 (3.8 to 9.2)	18.3 (-8.3 to 54.2)	-30.8 (-46.2 to -10.8)
Metastatic phase of liver cancer due to alcohol use	10.7 (7.2 to 14.2)	10.5 (7.2 to 14.0)	-2.2 (-12.4 to 9.7)	-42.9 (-48.7 to -35.9)
Terminal phase of liver cancer due to alcohol use	5.4 (3.8 to 7.0)	5.2 (3.6 to 6.8)	-3.4 (-13.5 to 7.5)	-43.6 (-49.3 to -37.4)
Liver cancer due to other causes	21.2 (14.8 to 28.5)	19.1 (13.1 to 25.6)	-9.8 (-24.0 to 4.4)	-45.8 (-54.2 to -37.5)
Diagnosis and primary therapy phase of liver cancer due to other causes	5.8 (3.9 to 8.1)	5.2 (3.4 to 7.3)	-10.5 (-24.1 to 2.7)	-46.3 (-54.2 to -38.4)
Controlled phase of liver cancer due to other causes	3.7 (2.2 to 5.7)	3.9 (2.4 to 6.0)	6.4 (-22.9 to 40.1)	-36.0 (-53.6 to -15.3)
Metastatic phase of liver cancer due to other causes	7.9 (5.3 to 10.6)	6.7 (4.5 to 9.1)	-14.0 (-25.7 to -2.1)	-48.5 (-55.0 to -41.3)
Terminal phase of liver cancer due to other causes	3.8 (2.6 to 4.9)	3.2 (2.2 to 4.2)	-14.8 (-26.2 to -3.1)	-49.0 (-55.5 to -42.1)
Larynx cancer	64.3 (45.5 to 87.7)	86.0 (60.0 to 115.2)	32.8 (22.0 to 49.6)	-22.0 (-28.3 to -12.4)
Diagnosis and primary therapy phase of larynx cancer	12.4 (7.9 to 17.5)	16.2 (10.5 to 23.2)	30.3 (17.4 to 49.4)	-23.6 (-31.1 to -12.2)
Controlled phase of larynx cancer	21.3 (13.3 to 31.9)	32.0 (20.0 to 48.2)	49.3 (35.9 to 69.2)	-11.8 (-19.9 to -0.4)
Metastatic phase of larynx cancer	24.0 (15.6 to 33.0)	30.0 (19.9 to 41.6)	24.8 (11.7 to 42.0)	-27.0 (-34.5 to -17.5)
Terminal phase of larynx cancer	4.2 (2.8 to 5.7)	5.2 (3.4 to 7.0)	23.6 (15.1 to 38.5)	-27.8 (-32.7 to -19.5)
Laryngectomy due to larynx cancer	2.5 (1.6 to 3.7)	2.6 (1.7 to 4.0)	6.2 (-12.5 to 23.3)	-37.1 (-48.7 to -26.7)
Tracheal, bronchus and lung cancer	284.4 (208.8 to 358.4)	467.4 (338.5 to 593.2)	64.6 (54.9 to 72.9)	-3.7 (-9.3 to 1.2)
Diagnosis and primary therapy phase of lung, bronchus, and trachea cancer	31.8 (21.9 to 43.0)	53.6 (36.5 to 72.1)	68.5 (55.9 to 80.8)	-1.3 (-8.6 to 5.7)
Controlled phase of lung, bronchus, and trachea cancer	57.3 (37.4 to 82.9)	101.4 (65.1 to 146.2)	77.2 (64.6 to 89.6)	4.1 (-3.3 to 11.1)
Metastatic phase of lung, bronchus, and trachea cancer	153.9 (107.5 to 199.6)	246.0 (170.7 to 320.3)	60.0 (50.5 to 68.7)	-6.3 (-11.7 to -1.6)
Terminal phase of lung, bronchus, and trachea cancer	41.4 (29.3 to 52.4)	66.3 (47.3 to 83.9)	59.9 (48.0 to 71.5)	-6.5 (-13.5 to 0.1)
Breast cancer	532.7 (388.4 to 697.8)	1,068.2 (760.8 to 1,428.1)	100.7 (86.6 to 114.3)	15.7 (7.8 to 23.2)
Diagnosis and primary therapy phase of breast cancer	49.1 (33.1 to 68.1)	102.7 (69.8 to 140.4)	109.4 (92.6 to 126.8)	21.3 (11.7 to 31.1)
Controlled phase of breast cancer	156.1 (101.5 to 228.5)	286.1 (184.8 to 420.8)	83.2 (65.9 to 104.0)	6.6 (-3.2 to 18.5)
Metastatic phase of breast cancer	180.6 (123.6 to 236.4)	295.5 (203.0 to 385.3)	63.9 (52.7 to 75.9)	-5.6 (-12.1 to 1.3)
Terminal phase of breast cancer	15.5 (10.6 to 20.1)	24.7 (17.1 to 31.9)	60.4 (45.3 to 74.9)	-7.8 (-16.6 to 0.9)
Mastectomy due to breast cancer	131.5 (77.4 to 204.1)	359.2 (210.7 to 557.2)	173.9 (159.0 to 186.8)	52.5 (44.3 to 59.8)
Cervical cancer	225.1 (159.1 to 303.0)	243.8 (169.8 to 333.0)	8.3 (-3.5 to 22.3)	-34.6 (-41.7 to -26.6)
Diagnosis and primary therapy phase of cervical cancer	38.1 (24.8 to 52.9)	41.4 (26.7 to 58.5)	8.5 (-5.8 to 24.5)	-34.4 (-42.6 to -25.0)
Controlled phase of cervical cancer	123.2 (77.2 to 181.6)	131.8 (83.3 to 193.6)	7.0 (-6.1 to 22.2)	-35.2 (-43.2 to -26.5)
Metastatic phase of cervical cancer	54.3 (36.0 to 72.3)	60.2 (39.2 to 81.1)	10.5 (-2.2 to 26.0)	-33.8 (-41.2 to -24.9)
Terminal phase of cervical cancer	9.5 (6.4 to 12.4)	10.5 (6.9 to 13.8)	10.3 (0.3 to 21.2)	-34.1 (-40.0 to -27.8)
Uterine cancer	119.0 (80.2 to 166.6)	193.7 (123.7 to 273.6)	62.9 (36.4 to 92.1)	-6.0 (-20.6 to 9.8)
Diagnosis and primary therapy phase of uterine cancer	19.6 (12.8 to 27.6)	32.0 (20.4 to 45.5)	63.9 (36.7 to 95.2)	-5.3 (-20.6 to 11.8)

Appendix Table G.2: YLD numbers and age-standardized rates with percent change between 1990 and 2013 for all causes and sequelae (statistically significant % change shown in bold)

	YLDs 1990 (thousands)	YLDs 2013 (thousands)	% change YLDs, 1990 to 2013	% change age-standardized YLDs, 1990 to 2013
Controlled phase of uterine cancer	75.7 (45.4 to 113.0)	126.1 (74.7 to 191.1)	66.7 (38.2 to 98.2)	-3.4 (-19.3 to 13.8)
Metastatic phase of uterine cancer	20.9 (13.5 to 28.7)	31.2 (20.3 to 42.5)	49.8 (26.8 to 72.8)	-14.6 (-27.5 to -1.7)
Terminal phase of uterine cancer	3.0 (1.9 to 4.0)	4.4 (2.9 to 5.9)	49.7 (28.8 to 71.0)	-15.0 (-26.3 to -3.3)
Prostate cancer	333.0 (242.4 to 430.0)	893.7 (656.7 to 1,192.5)	164.2 (142.0 to 208.3)	48.2 (35.8 to 72.9)
Diagnosis and primary therapy phase of prostate cancer	28.1 (18.2 to 39.9)	100.9 (67.0 to 146.5)	251.1 (202.6 to 339.8)	99.6 (72.2 to 148.9)
Controlled phase of prostate cancer	65.2 (40.6 to 98.6)	250.5 (156.3 to 379.0)	278.6 (230.6 to 362.2)	115.3 (88.4 to 163.7)
Metastatic phase of prostate cancer	151.4 (100.9 to 201.6)	356.2 (238.5 to 494.0)	131.0 (109.1 to 178.9)	29.4 (17.1 to 57.1)
Terminal phase of prostate cancer	8.3 (5.6 to 11.0)	18.2 (12.7 to 24.9)	116.9 (88.0 to 165.6)	22.0 (5.6 to 49.6)
Impotence due to prostate cancer	23.1 (12.3 to 39.3)	48.4 (25.3 to 81.8)	109.7 (95.4 to 125.3)	17.7 (9.6 to 27.0)
Incontinence due to prostate cancer	56.9 (39.8 to 78.6)	119.5 (83.5 to 166.3)	109.7 (95.7 to 126.4)	17.8 (9.5 to 27.3)
Colon and rectum cancer	359.0 (266.4 to 460.0)	701.9 (512.7 to 899.1)	95.5 (86.5 to 104.1)	11.5 (6.3 to 16.5)
Diagnosis and primary therapy phase of colon and rectum cancers	49.4 (34.3 to 66.7)	100.6 (69.1 to 134.9)	103.5 (92.7 to 115.3)	16.2 (10.3 to 23.3)
Controlled phase of colon and rectum cancers	156.7 (103.2 to 225.7)	333.5 (217.9 to 487.3)	112.9 (102.7 to 122.2)	22.3 (16.6 to 27.8)
Metastatic phase of colon and rectum cancers	124.0 (86.9 to 160.2)	220.8 (154.1 to 285.1)	78.1 (70.3 to 86.7)	0.8 (-3.9 to 5.5)
Terminal phase of colon and rectum cancers	20.4 (14.6 to 25.6)	35.6 (25.1 to 45.1)	74.4 (62.4 to 86.1)	-1.1 (-8.0 to 5.7)
Stoma due to colon and rectum cancer	8.5 (5.8 to 11.6)	11.4 (7.9 to 15.5)	33.1 (25.4 to 41.5)	-25.3 (-29.8 to -20.3)
Lip and oral cavity cancer	119.6 (86.6 to 161.3)	206.9 (145.2 to 278.3)	72.3 (52.9 to 98.2)	0.0 (-11.1 to 14.6)
Diagnosis and primary therapy phase of mouth cancer	21.4 (14.1 to 30.4)	37.3 (24.4 to 53.6)	73.5 (49.2 to 103.9)	0.8 (-12.9 to 18.2)
Controlled phase of mouth cancer	53.1 (33.9 to 78.8)	95.1 (59.8 to 139.9)	77.9 (56.6 to 107.0)	3.8 (-8.2 to 20.6)
Metastatic phase of mouth cancer	38.5 (26.1 to 52.4)	63.7 (41.8 to 86.3)	65.3 (44.6 to 90.4)	-4.6 (-16.8 to 9.4)
Terminal phase of mouth cancer	6.5 (4.5 to 8.8)	10.8 (7.2 to 14.6)	64.8 (46.4 to 87.3)	-5.0 (-15.9 to 7.8)
Nasopharynx cancer	38.1 (26.8 to 52.1)	47.9 (33.1 to 64.3)	25.9 (5.6 to 49.6)	-23.5 (-36.0 to -9.4)
Diagnosis and primary therapy phase of nasopharynx cancer	6.2 (3.9 to 8.8)	7.9 (5.0 to 11.2)	27.7 (5.4 to 54.1)	-22.5 (-36.1 to -7.1)
Controlled phase of nasopharynx cancer	15.3 (9.5 to 23.5)	20.1 (12.4 to 30.2)	31.2 (5.3 to 62.6)	-19.7 (-35.5 to -0.7)
Metastatic phase of nasopharynx cancer	14.8 (9.8 to 20.2)	17.8 (11.6 to 24.3)	20.4 (3.9 to 38.8)	-27.5 (-37.1 to -16.4)
Terminal phase of nasopharynx cancer	1.8 (1.2 to 2.4)	2.2 (1.4 to 2.9)	18.6 (3.9 to 34.3)	-28.6 (-37.4 to -19.1)
Other pharynx cancer	37.5 (26.7 to 49.5)	66.0 (45.5 to 88.5)	75.5 (51.3 to 101.5)	1.4 (-12.6 to 16.3)
Diagnosis and primary therapy phase of other pharynx cancer	6.8 (4.5 to 9.4)	12.0 (7.7 to 16.9)	77.5 (46.5 to 112.5)	2.3 (-15.4 to 22.5)
Controlled phase of other pharynx cancer	16.3 (10.4 to 23.9)	29.8 (18.5 to 44.2)	82.7 (54.4 to 113.2)	5.8 (-10.8 to 23.0)
Metastatic phase of other pharynx cancer	12.1 (8.1 to 15.9)	20.2 (13.2 to 27.6)	67.4 (42.1 to 97.3)	-3.7 (-18.1 to 12.8)
Terminal phase of other pharynx cancer	2.4 (1.6 to 3.1)	4.0 (2.6 to 5.2)	66.8 (47.4 to 87.0)	-3.9 (-15.3 to 7.3)
Gallbladder and biliary tract cancer	28.1 (20.0 to 36.6)	39.1 (27.0 to 52.1)	39.8 (22.7 to 54.9)	-20.5 (-30.6 to -11.5)
Diagnosis and primary therapy phase of gallbladder and biliary tract cancer	5.7 (3.9 to 7.8)	8.1 (5.4 to 11.2)	42.9 (24.7 to 59.8)	-18.9 (-29.4 to -8.7)
Controlled phase of gallbladder and biliary tract cancer	1.8 (1.1 to 2.7)	3.0 (1.9 to 4.3)	64.2 (40.5 to 88.9)	-7.1 (-20.7 to 7.4)
Metastatic phase of gallbladder and biliary tract cancer	15.1 (10.4 to 19.8)	20.5 (13.6 to 27.7)	36.9 (19.5 to 52.9)	-22.2 (-32.3 to -12.5)
Terminal phase of gallbladder and biliary tract cancer	5.5 (3.9 to 7.1)	7.5 (5.1 to 9.9)	36.2 (18.5 to 52.2)	-22.5 (-33.1 to -12.8)
Pancreatic cancer	38.3 (27.3 to 49.4)	73.6 (52.1 to 96.2)	92.1 (80.6 to 103.7)	9.9 (3.1 to 16.8)
Diagnosis and primary therapy phase of pancreatic cancer	10.9 (7.5 to 14.9)	21.0 (14.1 to 28.5)	91.9 (77.2 to 107.4)	9.6 (1.1 to 18.8)
Controlled phase of pancreatic cancer	4.4 (2.8 to 6.5)	9.2 (5.9 to 13.7)	108.2 (81.4 to 139.3)	19.3 (4.1 to 37.1)
Metastatic phase of pancreatic cancer	15.4 (10.6 to 20.2)	29.1 (20.3 to 37.9)	89.5 (75.7 to 102.9)	8.4 (0.4 to 16.5)
Terminal phase of pancreatic cancer	7.6 (5.3 to 9.8)	14.4 (10.0 to 18.5)	88.8 (75.6 to 103.8)	7.9 (-0.6 to 17.8)
Malignant skin melanoma	76.4 (50.3 to 110.8)	137.9 (91.7 to 205.0)	80.8 (59.5 to 99.7)	9.1 (-3.8 to 20.2)
Diagnosis and primary therapy phase of malignant skin melanoma	9.2 (5.7 to 13.1)	16.4 (10.6 to 24.7)	79.6 (53.6 to 104.8)	8.7 (-7.2 to 23.9)
Controlled phase of malignant skin melanoma	54.3 (33.7 to 83.0)	101.7 (62.7 to 157.8)	87.4 (64.5 to 108.8)	14.4 (0.8 to 26.7)

Appendix Table G.2: YLD numbers and age-standardized rates with percent change between 1990 and 2013 for all causes and sequelae (statistically significant % change shown in bold)

	YLDs 1990 (thousands)	YLDs 2013 (thousands)	% change YLDs, 1990 to 2013	% change age-standardized YLDs, 1990 to 2013
Metastatic phase of malignant skin melanoma	10.8 (7.1 to 15.2)	16.6 (10.7 to 23.7)	54.3 (35.5 to 71.1)	-9.5 (-21.4 to 1.2)
Terminal phase of malignant skin melanoma	2.1 (1.4 to 2.9)	3.2 (2.1 to 4.5)	53.6 (34.2 to 67.6)	-10.5 (-22.4 to -1.6)
Non-melanoma skin cancer	49.9 (32.2 to 76.3)	126.2 (82.5 to 188.1)	152.8 (116.5 to 200.2)	42.5 (21.3 to 70.3)
Diagnosis and primary therapy phase of cutaneous squamous cell carcinoma	2.5 (1.6 to 3.6)	8.0 (5.1 to 11.5)	215.3 (158.1 to 286.9)	78.8 (44.4 to 120.9)
Control phase of cutaneous squamous cell carcinoma	13.9 (8.5 to 21.4)	47.2 (29.3 to 72.3)	236.6 (180.5 to 311.1)	94.7 (59.7 to 137.8)
Metastatic phase of cutaneous squamous cell carcinoma	9.0 (5.9 to 12.5)	24.1 (15.6 to 34.8)	166.9 (107.8 to 246.5)	46.3 (13.2 to 92.1)
Terminal phase of cutaneous squamous cell carcinoma	0.9 (0.6 to 1.2)	2.4 (1.5 to 3.5)	169.6 (109.0 to 250.3)	46.7 (11.7 to 92.4)
Disfigurement due to basal cell carcinoma	23.5 (11.0 to 42.9)	44.6 (20.9 to 80.2)	89.3 (56.7 to 124.0)	7.4 (-11.8 to 27.6)
Ovarian cancer	81.8 (58.8 to 104.7)	134.9 (97.0 to 174.6)	65.1 (52.0 to 79.7)	-2.9 (-10.7 to 4.8)
Diagnosis and primary therapy phase of ovarian cancer	5.6 (3.8 to 7.8)	9.6 (6.4 to 13.5)	69.5 (52.7 to 87.3)	-0.2 (-10.6 to 10.6)
Controlled phase of ovarian cancer	21.6 (13.8 to 31.2)	36.6 (23.7 to 54.1)	69.3 (54.8 to 84.9)	0.2 (-8.1 to 9.0)
Metastatic phase of ovarian cancer	50.1 (34.7 to 65.0)	81.5 (56.3 to 107.4)	62.9 (48.6 to 78.3)	-4.6 (-12.8 to 4.2)
Terminal phase of ovarian cancer	4.4 (3.1 to 5.7)	7.2 (4.9 to 9.3)	62.5 (51.7 to 73.6)	-5.1 (-11.3 to 0.9)
Testicular cancer	21.9 (14.5 to 31.1)	34.3 (22.2 to 49.0)	57.6 (30.8 to 80.5)	6.6 (-10.8 to 21.9)
Diagnosis and primary therapy phase of testicular cancer	3.0 (2.0 to 4.3)	4.8 (3.1 to 6.8)	60.5 (31.6 to 84.3)	8.9 (-10.1 to 24.5)
Controlled phase of testicular cancer	15.6 (9.7 to 23.5)	25.0 (14.9 to 37.8)	61.4 (31.2 to 87.0)	10.2 (-9.7 to 27.0)
Metastatic phase of testicular cancer	3.0 (2.0 to 4.1)	4.1 (2.7 to 5.7)	38.1 (24.8 to 57.5)	-10.7 (-19.1 to 2.9)
Terminal phase of testicular cancer	0.3 (0.2 to 0.4)	0.4 (0.3 to 0.5)	34.2 (21.6 to 52.6)	-12.4 (-20.3 to 0.7)
Kidney cancer	66.3 (47.5 to 89.4)	139.2 (99.2 to 185.8)	109.7 (97.0 to 123.5)	26.1 (18.2 to 34.3)
Diagnosis and primary therapy phase of kidney cancer	12.5 (8.4 to 17.0)	26.5 (17.9 to 36.5)	112.1 (94.9 to 132.1)	27.9 (17.7 to 40.6)
Controlled phase of kidney cancer	37.2 (23.9 to 54.1)	80.9 (53.1 to 116.6)	117.5 (103.1 to 133.7)	32.7 (24.3 to 41.7)
Metastatic phase of kidney cancer	13.3 (9.1 to 17.6)	25.5 (17.3 to 33.5)	92.2 (75.7 to 109.1)	11.8 (1.9 to 22.4)
Terminal phase of kidney cancer	3.3 (2.3 to 4.3)	6.4 (4.4 to 8.2)	90.8 (79.1 to 103.8)	10.3 (3.0 to 18.8)
Bladder cancer	117.7 (86.4 to 154.4)	179.8 (132.1 to 235.5)	52.5 (44.1 to 62.5)	-12.8 (-17.8 to -6.9)
Diagnosis and primary therapy phase of bladder cancer	22.2 (15.3 to 30.1)	34.6 (23.7 to 47.5)	55.7 (43.9 to 68.9)	-10.9 (-17.7 to -3.6)
Controlled phase of bladder cancer	56.8 (37.0 to 82.5)	91.3 (60.1 to 132.1)	60.6 (50.8 to 72.3)	-7.3 (-13.0 to -0.6)
Metastatic phase of bladder cancer	27.1 (18.5 to 35.5)	38.7 (26.5 to 50.9)	42.8 (33.0 to 54.5)	-19.4 (-25.3 to -12.8)
Terminal phase of bladder cancer	6.3 (4.4 to 8.1)	9.0 (6.3 to 11.6)	43.3 (31.0 to 56.1)	-19.2 (-26.5 to -11.6)
Urinary incontinence due to bladder cancer	5.3 (3.7 to 7.4)	6.1 (4.2 to 8.7)	15.2 (6.0 to 25.4)	-35.6 (-40.5 to -29.7)
Brain and nervous system cancer	78.8 (55.0 to 107.1)	121.9 (87.1 to 165.1)	55.4 (34.3 to 71.8)	5.6 (-6.7 to 15.9)
Diagnosis and primary therapy phase of brain and nervous system cancers	12.6 (8.3 to 18.0)	19.6 (12.9 to 27.8)	56.1 (33.8 to 74.2)	7.0 (-6.5 to 18.8)
Controlled phase of brain and nervous system cancers	31.5 (19.1 to 48.0)	46.5 (29.5 to 69.4)	49.4 (24.6 to 70.3)	7.0 (-8.7 to 20.9)
Metastatic phase of brain and nervous system cancers	28.5 (18.8 to 38.7)	45.7 (30.7 to 61.5)	60.9 (43.7 to 74.4)	4.3 (-6.7 to 12.6)
Terminal phase of brain and nervous system cancers	6.2 (4.2 to 8.2)	10.0 (6.9 to 13.2)	62.1 (45.7 to 74.5)	4.9 (-4.9 to 12.5)
Thyroid cancer	65.7 (44.0 to 91.2)	127.6 (85.7 to 180.9)	94.9 (71.3 to 122.4)	19.7 (6.6 to 35.6)
Diagnosis and primary therapy phase of thyroid cancer	7.7 (5.0 to 10.7)	15.1 (9.7 to 21.4)	96.4 (72.0 to 126.1)	21.5 (7.0 to 39.4)
Controlled phase of thyroid cancer	48.4 (30.0 to 72.1)	96.8 (60.7 to 145.0)	100.8 (74.2 to 130.7)	25.3 (9.9 to 42.8)
Metastatic phase of thyroid cancer	8.8 (5.8 to 11.7)	14.5 (9.6 to 19.4)	64.3 (49.3 to 82.1)	-4.1 (-13.2 to 6.3)
Terminal phase of thyroid cancer	0.8 (0.5 to 1.0)	1.2 (0.8 to 1.6)	60.5 (47.6 to 77.5)	-5.9 (-13.5 to 3.4)
Mesothelioma	5.6 (3.9 to 7.4)	10.8 (7.4 to 14.4)	96.6 (66.5 to 113.0)	14.1 (-4.4 to 23.5)
Diagnosis and primary therapy phase of mesothelioma	0.6 (0.4 to 0.8)	1.2 (0.7 to 1.6)	100.4 (71.1 to 117.8)	16.2 (-2.0 to 26.4)
Controlled phase of mesothelioma	0.7 (0.4 to 1.1)	1.3 (0.8 to 2.0)	87.0 (57.8 to 108.1)	8.7 (-8.3 to 21.0)
Metastatic phase of mesothelioma	3.5 (2.4 to 4.8)	6.9 (4.6 to 9.3)	97.0 (66.2 to 115.4)	14.2 (-4.6 to 25.2)
Terminal phase of mesothelioma	0.7 (0.5 to 1.0)	1.5 (1.0 to 1.9)	101.3 (70.3 to 116.4)	16.6 (-2.3 to 25.4)

Appendix Table G.2: YLD numbers and age-standardized rates with percent change between 1990 and 2013 for all causes and sequelae (statistically significant % change shown in bold)

	YLDs 1990 (thousands)	YLDs 2013 (thousands)	% change YLDs, 1990 to 2013	% change age-standardized YLDs, 1990 to 2013
Hodgkin lymphoma	61.5 (39.4 to 87.4)	57.5 (38.7 to 82.1)	-12.0 (-26.8 to 56.4)	-36.2 (-45.7 to 11.0)
Diagnosis and primary therapy phase of Hodgkin disease	7.0 (4.1 to 10.3)	6.5 (4.2 to 9.7)	-11.4 (-29.8 to 60.1)	-34.5 (-46.2 to 16.5)
Controlled phase of Hodgkin disease	34.0 (19.7 to 51.9)	31.0 (18.8 to 47.9)	-13.3 (-32.9 to 60.5)	-34.4 (-47.5 to 19.6)
Metastatic phase of Hodgkin disease	18.9 (12.0 to 25.8)	18.5 (12.1 to 25.7)	-7.8 (-17.6 to 50.2)	-38.7 (-45.3 to -0.7)
