

S7 Fig. Entolimod concentrations in the peripheral blood of NHPs (irradiated with LD_{50/40} (6.75 Gy) TBI or non-irradiated) at different times after single intramuscular injection of the indicated drug doses.

A: Entolimod levels after injection of different doses 1 h after TBI (study Rs-09; N=18). **B:** Entolimod levels after injection of the same dose levels in non-irradiated NHPs (study 04-Rs-04; N=6). This study is not described in the current manuscript and data are shown for comparison. Error bars represent standard errors.
