

Supplemental Figures for:
 Long Term Follow-up of Chemotherapy-induced Ovarian Failure in Young Breast Cancer Patients - The Role of Vascular Toxicity
 Irit Ben-Aharon et al.

Figure S1: Changes in ovarian measurements using transvaginal ultrasound equipped with Doppler. Graphic representation of change in resistance index (RI) and pulsatility index (PI) measurements over time, indicating a decrease in ovarian blood flow following chemotherapy and relative recovery stratified upon tratsuzumab ($p=0.068$).
