

Supplemental Table 1. Incidence Rates of Hepatocellular Carcinoma, Decompensation, and Death among Patients not Tested for Hepatitis D - stratified by the presence of the High Risk profile*

Variable	Total (N=4,929)	High Risk Profile (N=1,181)	No High Risk Profile (N=3,748)	IRR (95% CI) (High risk profile versus No High Risk Profile)	P-Value
HCC	6.9	10	5.8	1.7 (1.2-2.5)	<0.001
Hepatic Decompensation	14	19	12	1.6 (1.2-2.0)	<0.001
Death	41	47	39	1.2 (1.0-1.4)	0.006

Abbreviations: HCC=hepatocellular carcinoma

Incidence rates reported as cases per 1,000 person-years

*High risk profile= ALT \geq 2 ULN and HBV DNA < 2000 IU/mL

Supplementary Table 2. Military service eras for HDV positive patients

Service Area	Number (%)
Korean	1 (1.5)
Persian Gulf	4 (6.0)
Post-vietnam	19 (28)
Vietnam	42 (63)
