<sup>a</sup>Lilliefors significance correction.<sup>b</sup>Shapiro-Wilk test: if sig. >0.05, the data are normal distribution. If it is below 0.05, the data significantly deviate from a normal distribution.<sup>c</sup>This is a lower bound of the true significance.

MTR, magnetization transfer ratio; MI, primary motor area; PMd, premotor dorsal area; PMv, premotor ventral area; SC, somatosensory cortex; SMA, supplementary motor area.
