

## Supplemental Data

**Supplemental Figure 1.** Elevated expression of *CIPK21* gene in the WT (Col-0) plants under various conditions such as ABA (100  $\mu$ M), cold (4°C), drought, or PEG (30%) treatments. Semi-quantitative RT-PCR analysis (25 cycles) was performed with *CIPK21*-specific primers. *ACTIN2* was used as a loading control.

**Supplemental Figure S2.** Expression of the *CIPK21* gene in *Arabidopsis eFP Browser*.

**Supplemental Figure S3.** Subcellular localization of the the *CIPK21* in the epidermal peel cells of *Nicotiana benthamiana*.

**Supplemental Figure S4.** *CIPK21*:GFP co-expressed either with *CBL1n*:OFP (upper panel, red) or *TPC1*:OFP (lower panel, red) in the epidermal cells of *Nicotiana benthamiana*. Scale bar = 40  $\mu$ m.

**Supplemental Figure S5.** Investigation of interaction of CBLs with *CIPK21* by bimolecular fluorescence complementation in the epidermal peel cells of *Nicotiana benthamiana*. Plasmid combinations are indicated on the left. Scale bars =40  $\mu$ m.

**Supplemental Figure S6.** Determination of the relative fluorescence produced to monitor the effects of salt stress treatment on pGPTV-II-BAR-35S::mVENUS vector, which were incubated with 125mM NaCl or control (10 mM MES pH5.6, 10 mM MgCl<sub>2</sub>) medium. Results are presented as average values along with standard errors from three experiments.

**Supplemental Table S1.** List of primers used for quantitative PCR/RT-PCR
