

SUPPLEMENTARY FIG. S2. MIA PaCa-2 cells, transfected with scramble control siRNA (sc-RNAi) or Beclin-1 siRNA (100 nM each, 36 h), were either left untreated (“C”), or treated with OSI-027 (50 nM) for 72 h, expression of Beclin-1 and GAPDH was tested by western blots (**A**), cell survival was also tested (**B**). Data are expressed as mean \pm standard error, experiments were repeated five times. $n = 5$ for each assay. * $p < 0.05$ versus “C” group. # $p < 0.05$ versus “sc-RNAi” group.
