

Additional file 6: Gene transcript features to different mRNA decay patterns. Analyzed GC content and MFEI value of mRNA, 5' UTR and 3' UTR for type-I, -II, -IV, randomly selected genes and all genes in foxtail millet. “R” represented randomly selected genes, “A” represented all genes, “***” indicate statistically significant differences at P value < 0.001 (Student’s wilcox-test).
