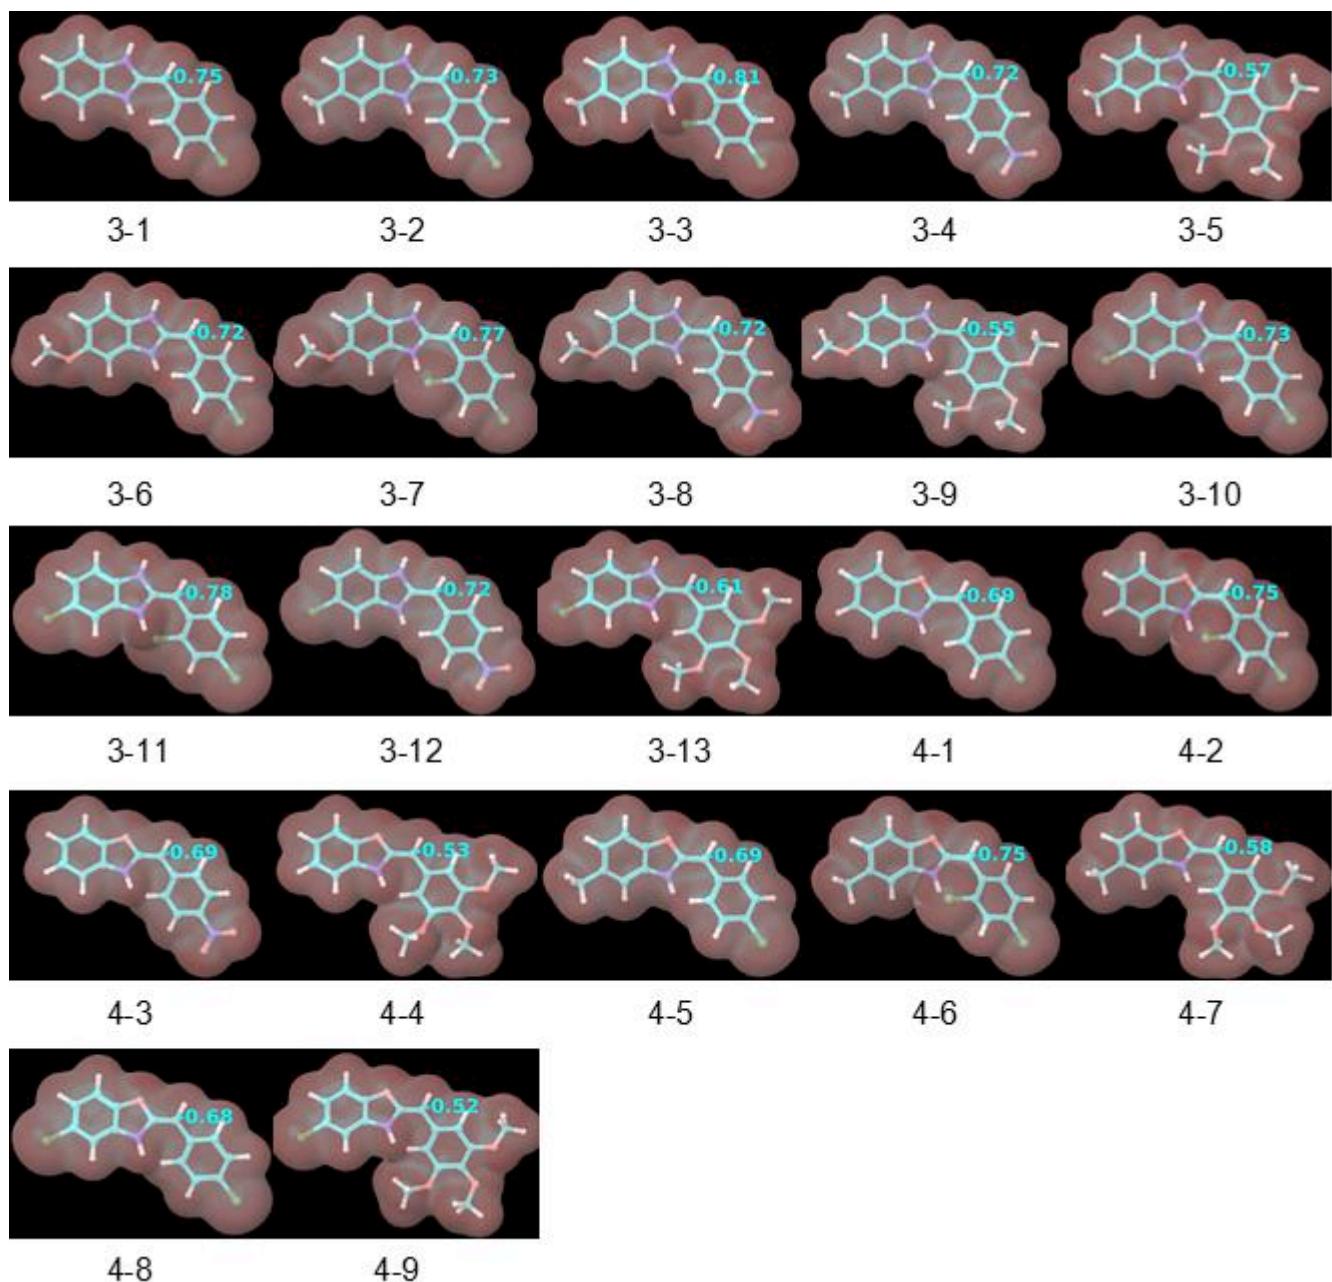

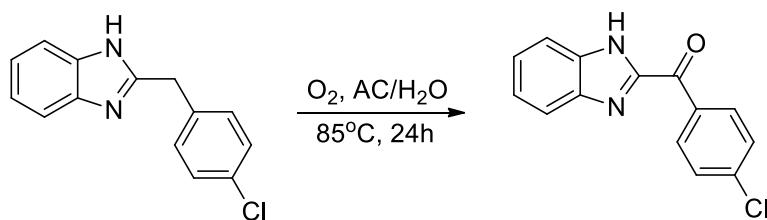

Figure S1: Electric density of the substrates in Table 3 and 4 in the form of the enamine tautomer.

Method: Calculations of the electric density were carried out with the Jaguar 4.0 software within Schrodinger (2014.1) using the B3LYP hybrid density functional method. Geometries were optimized using the 6-31G (d) basis set, and single point energies were calculated using the 6-311+G (d,p) basis set.
