

Supplementary Fig. 1. Kaplan-Meier survival analysis with log-rank test. (A) Recurrence free survival curve of the loss of expression (n=60) vs. retained expression groups (n=128) in all patients. (B) Recurrence free survival curve of the loss of expression (n=38) vs. retained expression groups (n=109) in mismatch repair (MMR)-deficient patients. (C) Recurrence free survival curve of the loss of expression (n=19) vs. retained expression groups (n=17) in MMR-proficient patients.
