

Additional File 3

Supplementary Figure 3. Effect of MenSCs treatment in mice with polymicrobial sepsis. Serum was isolated 24 hours post sepsis induction and administration of different treatments with antibiotics (AB) and/or MenSCs (Sham, n=3; Saline, n=5; AB, n=2-4; MenSCs, n=4; MenSCs+AB, n=4) to determine the concentrations of alkaline phosphatase (ALP) (left panel) and albumin (right panel). Dot plots represent individual values, horizontal bars represent mean values and vertical bars represent SE values. ** $p \leq 0.01$. Abbreviations: MenSCs, menstrual derived mesenchymal stem cells; AB, antibiotics; SE, standard error; ns, not significant.
