

Figure S1. (A) Body weight change in WT and *Il10*^{-/-} mice injected with PBS or (B) exposed to AOM. Body weight change was calculated for individual mice and plotted as a relative value compared to the day of diet change and first PBS/AOM injection (week 10). Arrows to the right of each graph indicate significant ($p < 0.05$) differences among indicated groups at week 30 (ANOVA followed by Tukey test).
