Table S1. Demographic and clinical characteristics of HIV-infected African-American women in WIHS, stratified by inclusion/exclusion status for *APOL1* substudy

Characteristic	Included (N = 431)	Excluded (N = 364)	P-value
Baseline Age (y)	41 (36-46)	42 (36-47)	0.55
Hypertension	31%	34%	0.37
Diabetes mellitus	10%	19%	0.0006
Hepatitis C virus infection	35%	37%	0.56
Current CD4+ cell count (cells/mm^3)	391 (246-583)	330 (179-539)	0.0011
History of AIDS	48%	48%	0.93
HIV RNA (copies/mL)			
<=80	28%	20%	0.087
81-1999	23%	27%	
2000-9999	16%	17%	
>=10000	32%	36%	
Current HAART use	59%	32%	<.0001

Data are presented as median (interquartile range) or numbers (percent). P-values from chi-square and Kruskal-Wallis tests for categorical and continuous variables, respectively.
Abbreviations: HAART, highly active antiretroviral therapy.
