

Supplementary Fig. S2

Supplementary Fig. S2. (A) The plasma Ang(1-7) level ($n=4-6$, $*p<0.05$ vs *db/db* + Ang(1-7)); (B) the representative traces of acetylcholine (ACh)-induced endothelium-dependent relaxations after phenylephrine (Phe, 1 $\mu\text{mol/L}$)-induced contraction in aortas, from *db/m+* and *db/db* mice chronically infused with/without Ang(1-7). Calibration bars apply to all traces.
