	B	74.0°	141.7°

The NMP-CORE angle and LID-CORE angle for *E. coli* AdK (AK<sub>eco</sub>) or models of AK<sub>eco</sub> based on crystal structures of homologous proteins [1] were computed from the C<sub>α</sub> atoms in the NMP, LID and CORE domain as described in Methods. The structures and structural models are available in the *AKeco Structure Library* under a Creative-Commons Attribution ShareAlike License [2].
