

Figure S6. Illustration of selected pTctrl and pTshDNMT1 clones derived from either HNEM-hTERT or BJ-hTERT cells. Light and fluorescence microscopy images of selected clones, either without (- doxy) or after (+ doxy) treatment with 1 $\mu\text{g}/\text{mL}$ of doxycycline during 3 days. Selected clones show $\sim 100\%$ tRFP positive cells after doxycycline exposure.
