

Supplementary Figure 2 'Induced-self' and 'missing-self' recognitions of BM derived NK cells are severely impaired in the absence of *p85α*. IL2-activated NK cells were tested against ⁵¹Cr-labeled EL4, EL4^{H60}, YAC-1 or RMA/S cells at the indicated E:T Ratios. Data shown are the averages of percent cytotoxicity from 6-8 mice in each category. Open and closed circles represent the NK cells from individual WT and *p85α*^{-/-} mice, respectively.
