

Figure S3. Production of cytokines by highly purified moDC. MoDC were sorted on the basis of CD1a expression (A) and exposed to *S.aureus* (S.a) and *S. epidermidis* (S.e) secretomes for 24 hours. IFN- γ and IL-10 secreted by purified cells were quantified (pg/ml) by a cytometry bead assay (B). The experiment shown in (A) is representative of three independent ones.
