Molecular Biology of the Cell

Moser et al.

SUPPLEMENTAL MATERIALS

**Ccq1-Tpz1^{TPP1} interaction facilitates telomerase and SHREC
association with telomeres in fission yeast**

Bettina A. Moser^a, Olga N. Raguimova^a, and Toru M. Nakamura^a

^aDepartment of Biochemistry and Molecular Genetics, College of Medicine, University of Illinois at Chicago, Chicago, Illinois, USA.

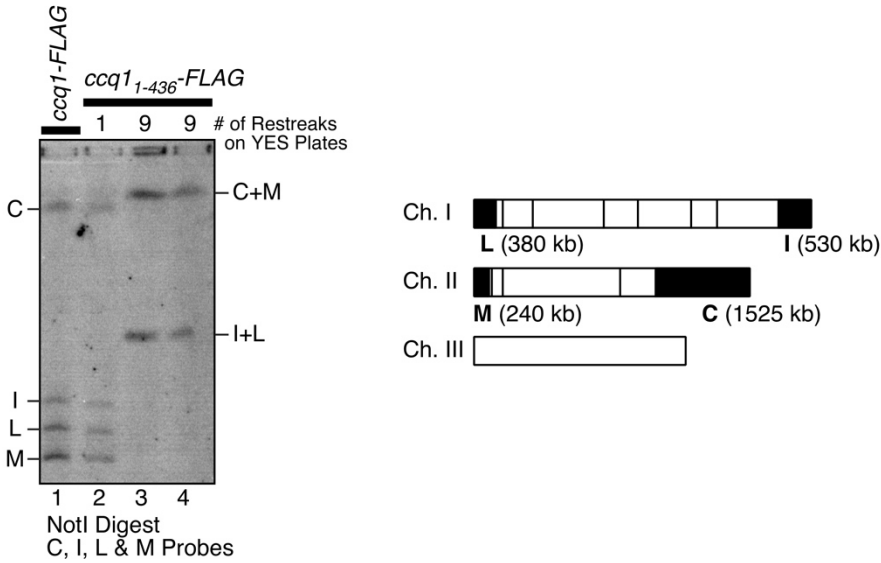

Supplemental Figures S1-S4

Supplemental Tables S1-S4

Supplemental References

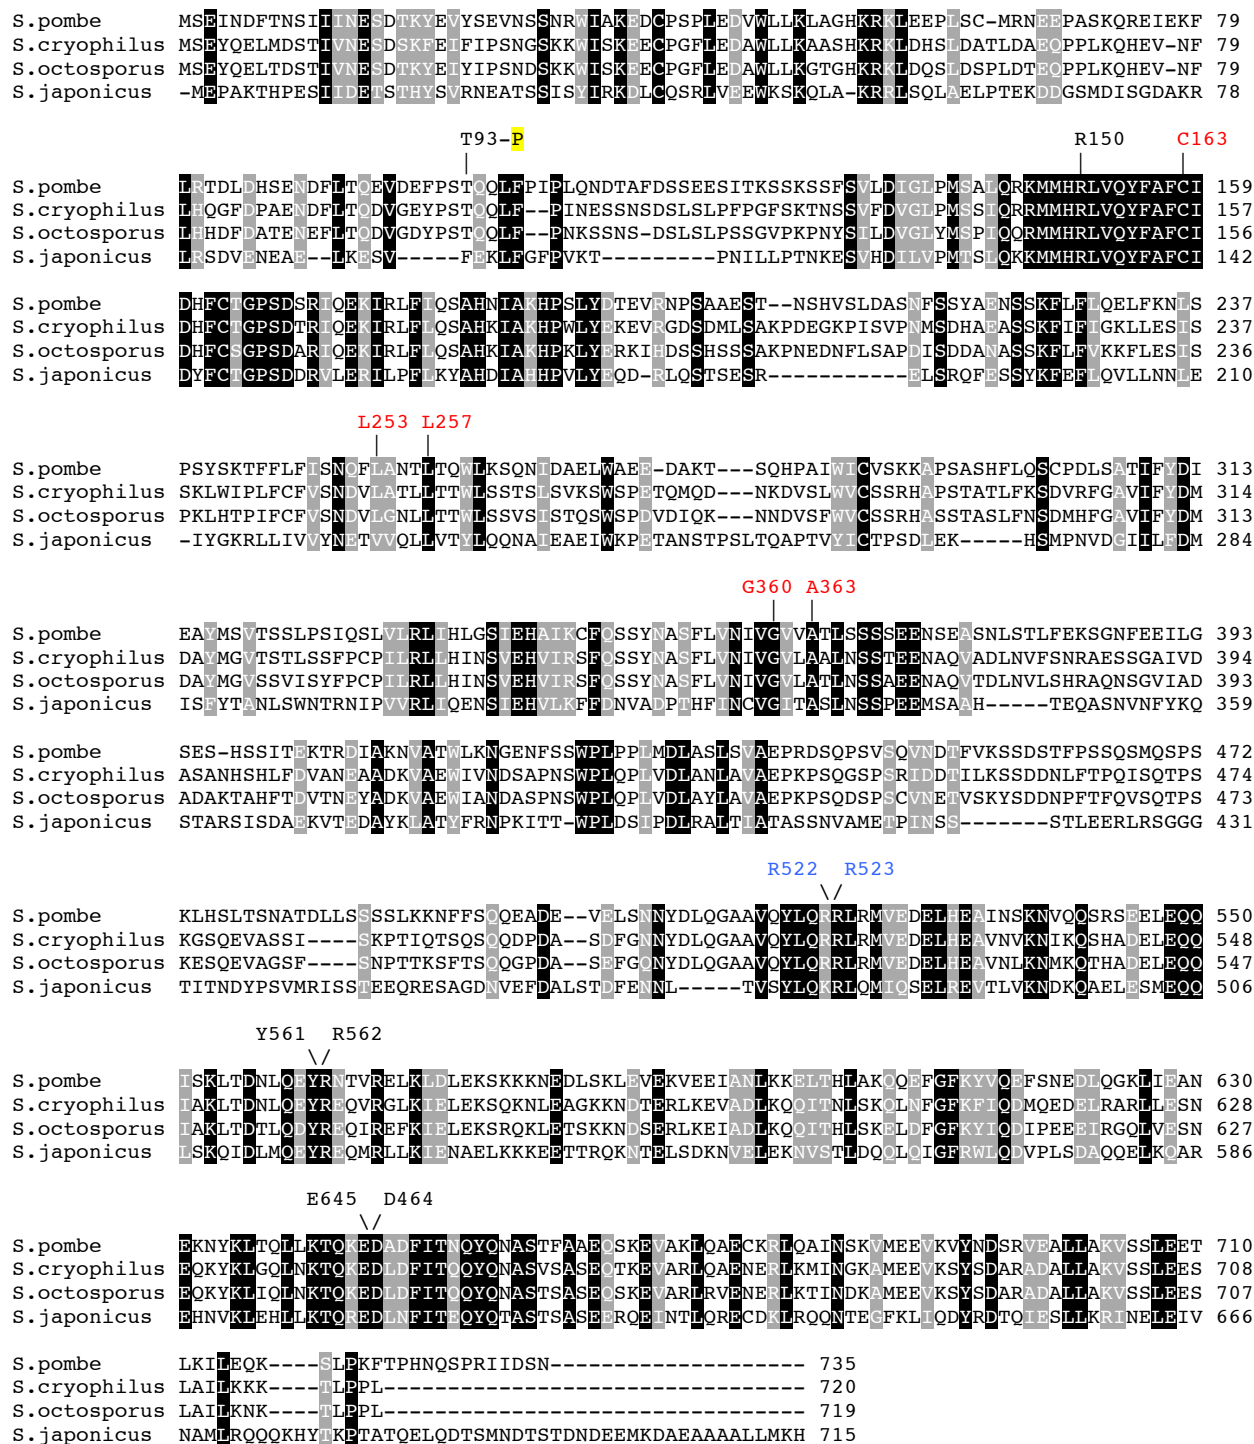

Supplemental Figure S1. Comparison of expression levels for Ccq1 and Tpz1^{TPP1}. The indicated amounts of whole cell extracts from strains that carry either myc-tagged Ccq1 or Tpz1^{TPP1} were analyzed by anti-myc western blot analysis. Analysis indicated that Ccq1 expression level is at least 10-fold greater than Tpz1^{TPP1} expression level.

Supplemental Figure S2. Characterization of chromosome structure for *ccq1*₁₋₄₃₆ cells. Pulsed-field gel analysis found that after successive restreaks on YES plates, *ccq1*₁₋₄₃₆ cells survive by circularizing chromosomes. Samples were prepared from early (1x) or extensively restreaked (9x) samples as indicated. A NotI restriction map of *S. pombe* chromosomes is also shown to the right. Telomeric NotI fragments (C, I, L, and M) are indicated with black boxes.

Analysis of shelterin subunit Ccq1
Moser *et al.*

■ Identical amino acids
 ■ Similar amino acids (Similar amino acids are defined as: GAVLI, FYW, CM, ST, KRH, DENQ, P.)

Supplemental Figure S3. Sequence alignment of Ccq1 from closely related fission yeast species. Ccq1 sequences from *S. pombe*, *S. cryophilus*, *S. octosporus*, and *S. japonicus* (Rhind *et al.*, 2011) were aligned using MUSCLE (Multiple Sequence Comparison by Log-Expectation) program (Edgar, 2004). Amino acid residues mutated in the current study, and Ccq1 Thr93 phosphorylation site are indicated.

Supplemental Figure S4. Ccq1 binding distribution at sub-telomere regions for wild-type and Ccq1-Tpz1^{TPP1} interaction disruption mutants of Ccq1. (A) A schematic map of telomere and sub-telomere regions based on the *S. pombe* genome sequencing project (Wood *et al.*, 2002) and our own sequencing of sub-telomere regions. Main features are indicated above. Colored bars marked with numbers indicate locations of PCR products for ChIP analysis shown in (B). (B) Ccq1 ChIP analysis for sub-telomere regions. Results are ordered from boxes 1 to 6, and color-coded as in the map shown in (A), and primer numbers for PCR are given. Primer sequences used in ChIP are summarized in Supplemental Table S3. Error bars represent standard error of the mean from at least three experimental replicates.

Table S1 Fission yeast strains used in this study.
