

Novel roles of TMEM100: inhibition metastasis and proliferation of hepatocellular carcinoma

Supplementary Material

Supplementary Figure 1: The relative expression level of TMEM100 in HCCLM3^{NC}, HCCLM3^{TMEM100+}, MHCC97-L^{NC} and MHCC97-L^{TMEM100+} cells. The expression of TMEM100 was significantly overexpressed in HCCLM3^{TMEM100+} and MHCC97-L^{TMEM100+} cells compared to HCCLM3^{NC} and MHCC97-L^{NC} cells ($p < 0.05$).
