

## Additional Data File 2

Comparison between profiles from

Chaussabel D, Sher A: **Mining microarray expression data by literature proling.** *Genome Biol* 2002, 3:1-16.

We re-clustered the 69 genes present in the clustergram in Figure 6 from Chaussabel *et al.* For each of the resulting clusters we constructed a text profile using our GO-based vocabulary. Complementary to the manuscript, we include profiles of clusters f-g below. Although profiles of clusters a-e are present in the manuscript, we reprint all info here, *along with the LocusLink ids used*, for the reader's convenience.

In the first two columns the HUGO names and corresponding LocusLink identifiers are provided. The terms extracted by Chaussabel *et al.* are shown in column three and contrasted to the TXTGate terms in column four. The TXTGate profiles are descriptive and match the terms from the initial analysis well.

HUGO Names	LocusLink ids	Terms Chaussabel	TXTGate terms (GO vocabulary)
