FE/UFE Balance	Weight	10 mg	1 mg	Placebo	Cumulative weight	BR Balance	10 mg	1 mg	Placebo	Cumulative weight
FE	380				76.9	% improved 4				12.9
						% improved 6				16.2
						% no worse				3.2
						Mean score				2.4
						BILAG A/B				9.7
						CS sparing				12.1
						Flare rate				20.2
						QoL				0.2
UFE	114				23.1	Potential SAEs				0.0
						Infections				19.2
						Sensitivity reaction				3.8
TOTAL	494	43	37	36	100.0	TOTAL	43	37	36	100.0

Figure S1. Different data presentations to evaluate benefit risk balance, in which the cumulative weight is calculated and the overall weighted scores are visualised. Left, impact of favourable effects (FE) and unfavourable effects (UFE) are shown in green and red, respectively. On the right, all different criteria are shown with their impact, which results in a more informative presentation of the data. For example, sensitivity reaction to 1mg has decreased impact as compared to placebo or 10mg. Based on [15].
