Additional File 3: Temporal expression pattern of each gene from the four different classes of the Agenes/Tudor family. Graphic representation of the average values among the expression values published in many microarray experiments available in Genevestigator. Bars indicate mean \pm standard error of different microarray experiments. Each gene is represented in a different color, as specified in the legend. Genes AT5G07350 and AT3G27460 from Class IV are out of analysis since there are no probes in the available microarray data.
