Figure S1.

Figure S1: Inhibitors with diverse scaffolds targeting at different levels of the mitochondrial electron transport chain. A rank scatter plot of IC50 values of pB mutants towards LUMF, ATQ, and ROT. The drug response of LUMF appears to be close to ATQ and ROTE rather than that of ARTL, which is more or less a straight line pattern. A correlation coefficient of 1000 permutations between the drug pair ATV-LUM was observed 0.64, which is greater than that observed with AL-LUMF which is 0.36 (p-value <0.001).

Figure S2

Figure S2: qRT-PCR. Quantitative analysis of the expression profile of the K13 propeller gene in WT NF54 and PB58, which carries a *piggyBac* insertion in the putative promoter region of the gene. The profiles are normalized against the constitutive-expressed gene PF3D7_071770. Although the K13 mutant does have slower growth than NF54, overall growth did not correlate with IC50 for most drugs (Pearson's r <0.1).

Legends to Table:

Table S6: A rank comparison of fold change from wild type GI₅₀ values in presence of mitochondrial inhibitors (ATQ, ROT) with non mitochondrial inhibitors AL. A Spearman correlation of the chemo-genetic values (RPR) between the drug groups ATQ-LUMF shows positive correlation (0.53) whereas AL-LUMF was negative (0.1) indicating LUMF might also act on mitochondrial targets.

Table S7 : P. falciparum gene clusters of drug responses. (The clusters are defined with Ward's minimum variance criterion, the number of clusters are determined by using maximum Cubic Clustering Criteria while increasing the cluster number)
