

CD44 enhances tumor aggressiveness by promoting tumor cell plasticity

Supplementary Material

a

MDA-MB-231

MCF-7

b

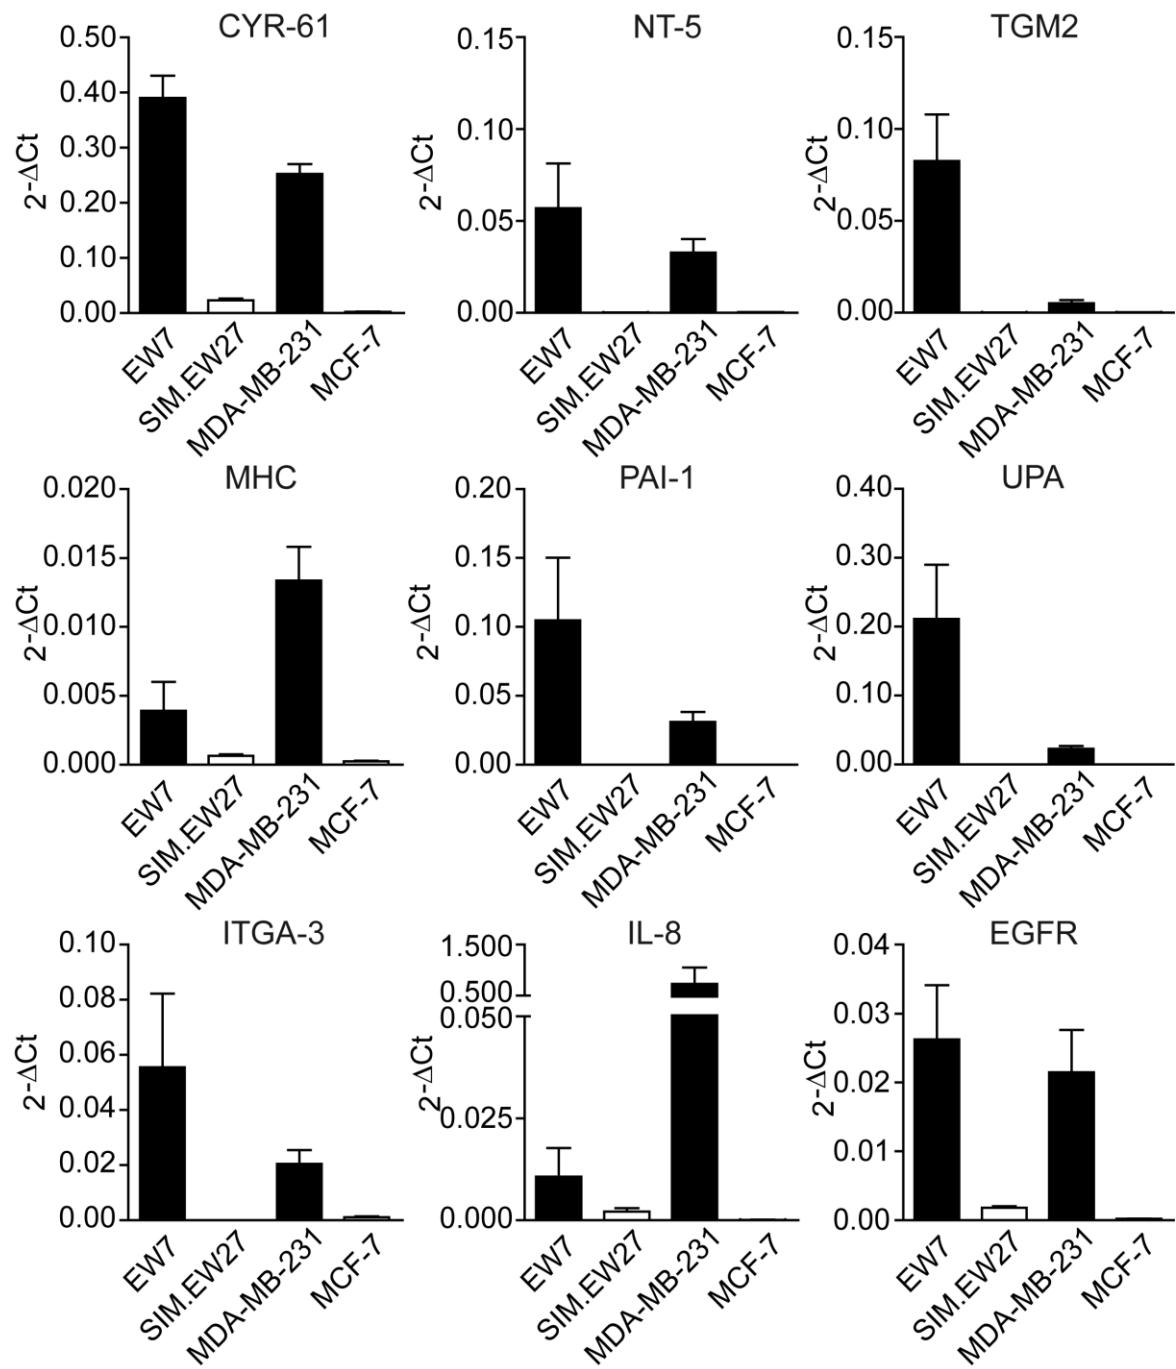

MDA-MB-231

MCF-7

Supplementary Figure S1: MDA-MB-231 breast carcinoma cells are capable of VM. **(a)**

MDA-MB-231 cells, in contrast to MCF-7 cells, form tubular patterns when cultured *in vitro* on Matrigel or **(b)** on collagen type I.

Supplementary Figure S2: Validation of microarray. Expression analysis of a selection of genes identified by microarray to be overexpressed by more than 10-fold in both VM⁺ Ewing sarcoma (EW7) and breast carcinoma (MDA-MB-231) cell lines as compared to the VM⁻ Ewing sarcoma (SIM.EW27) and breast carcinoma (MCF-7).

Supplementary Table S1: Primer sequences.

Gene	Forward 5'→3'	Reverse 5'→3'
