

Supplemental Fig. 1. Histological and immunohistochemical images of the malignant tumor samples used for Western blotting.

Hematoxylin-Eosin stain (A, C and E) and SSTR2 immunoreactivity (B, D and F) in three malignant tumor samples used for Western blotting. The left one of the malignant tumor samples in Fig. 2A corresponds to A and B in this figure. The middle one corresponds to C and D, and the right one corresponds to E and F. Scale bars indicate 25 μm .
