

Li et al., <http://www.jcb.org/cgi/content/full/jcb.201505062/DC1>

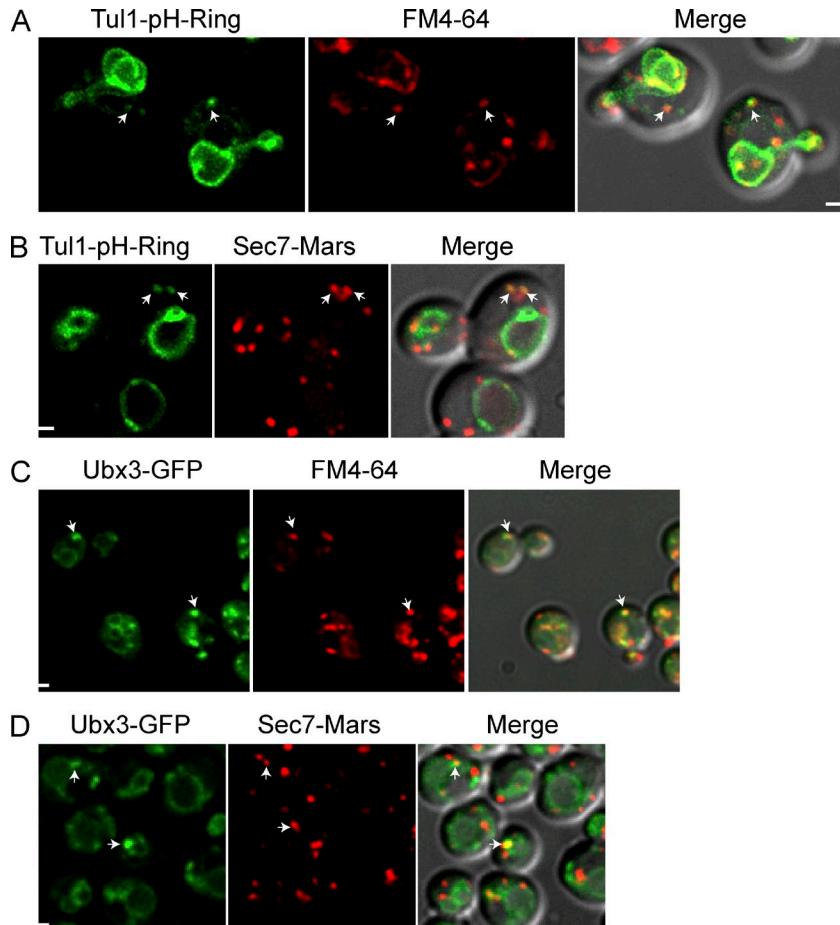

**Figure S1. Degradation of both Cot1-GFP and Zrt3\*-GFP happens in the vacuole lumen.** (A) Localization of *tet-O7* Cot1-GFP in both WT and *pep4Δ* strains, before and after Zn<sup>2+</sup> withdrawal from the YNB media. (B) Degradation kinetics for *tet-O7* Cot1-GFP in both WT and *pep4Δ* strains. G6PDH was used as a loading control. Same volume of cells was loaded, with 1 OD<sub>600</sub> cells loaded at 0 h. (C) Localization of Zrt3\*-GFP in wildtype and *pep4Δ* strains, before and after the addition of 2 mM ZnCl<sub>2</sub> in YNB media. Cells were pretreated with YNB without Zn<sup>2+</sup> for 3 h (0 h). (D) Degradation kinetics for Zrt3\*-GFP in WT and *pep4Δ* strains. G6PDH was used as a loading control. 1 OD<sub>600</sub> cells were loaded in each lane. Bar, 1 μm.

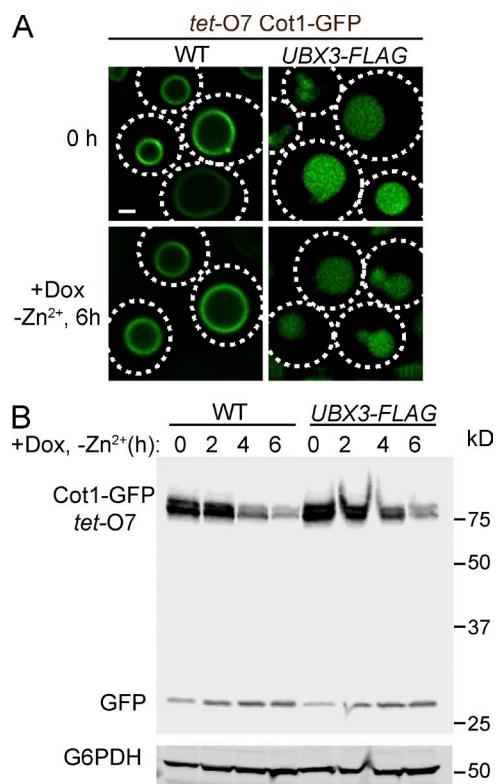

**Figure S2. ESCRTs, but not the autophagy machinery, are required for the degradation of Zrt3\*-GFP.** (A) Localization of Zrt3\*-GFP in WT and autophagy mutants before and after 2 mM ZnCl<sub>2</sub> treatment in YNB media. Cells were pretreated with YNB media without Zn<sup>2+</sup> for 3 h. (B) Degradation kinetics for Zrt3\*-GFP in WT and autophagy mutants. G6PDH was used as a loading control. Same volume of cells was loaded, with 1 OD<sub>600</sub> cells loaded at 0 h. (C) Localization of Zrt3\*-GFP in WT and ESCRT mutants before and after 2 mM ZnCl<sub>2</sub> treatment in YNB media. Cells were pretreated with YNB media without Zn<sup>2+</sup> for 3 h. Arrows highlight the aberrant endosomes. (D) Degradation kinetics for Zrt3\*-GFP in WT and ESCRT mutants. G6PDH was used as a loading control. Same volume of cells was loaded, with 1 OD<sub>600</sub> cells loaded at 0 h. Bar, 1 μm.

**Figure S3. Cot1-GFP and Zrt3\*-GFP are poly-ubiquitinated during their degradation.** (A) Zn<sup>2+</sup> withdrawal from the YNB media triggered the poly-ubiquitination of Cot1-GFP. (B) Addition of 2 mM ZnCl<sub>2</sub> to the YNB media triggered the poly-ubiquitination of Zrt3\*-GFP. Cells were pretreated with YNB media without Zn<sup>2+</sup> for 3 h.

**Figure S4. A fraction of the Dsc complex localizes to Golgi and endosomes.** (A) A fraction of Tul1-pH-Ring colocalizes with FM4-64 labeled endosomes. The cells were stained with FM4-64 for 5 min before imaging. Arrows highlight the colocalization. (B) A fraction of Tul1-pH-Ring colocalizes with Sec7-Mars labeled Golgi. Arrows highlight the colocalization. (C) A fraction of Ubx3-GFP colocalizes with FM4-64-labeled endosomes. The cells were stained with FM4-64 for 5 min before imaging. Arrows highlight the colocalization. (D) A fraction of Ubx3-GFP colocalizes with Sec7-Mars labeled Golgi. Arrows highlight the colocalization. Bar, 1 μm.

**Figure S5. *Ubx3-Flag* is functional.** (A) Localization of Cot1-GFP in WT and *UBX3-FLAG* strains, before and 6 h after Zn<sup>2+</sup> withdrawal from the YNB media. (B) Degradation kinetics for *tet-O7* Cot1-GFP in both WT and *UBX3-FLAG* strains. G6PDH was used as a loading control. 1 OD<sub>600</sub> cells were loaded in each lane. Bar, 1 μm.

Table S1. Yeast strains and plasmids used in this study

| Strain                                   | Name  | Genotype   | Reference/source      |
|--|---|--|-----------------------|
| <i>Saccharomyces cerevisiae</i> strains  |   |  |                       |
| SEY6210                                  | Wild type                                     | <i>Mata</i> , <i>leu1-3</i> , <i>112 ura3-52 his3-200</i> , <i>trp1-901 lys2-801</i><br><i>suc2-D9</i> | Robinson et al., 1988 |
| SEY6210.1                                | Wild type                                     | <i>Mata</i> , <i>leu1-3</i> , <i>112 ura3-52 his3-200</i> , <i>trp1-901 lys2-801</i><br><i>suc2-D9</i> | Robinson et al., 1988 |
| YML51                                    | <i>YCF1-GFP</i>                               | 6210, <i>YCF1-GFP::HIS3</i>  | This study            |
| YML52                                    | <i>ZRC1-GFP</i>                               | 6210, <i>ZRC1-GFP::HIS3</i>  | This study            |
| YML324                                   | <i>COT1-GFP</i>                               | 6210, <i>COT1-GFP::KAN</i>   | This study            |
| YML319                                   | <i>ZRT3*-GFP</i>                              | 6210, <i>ZRT3*-GFP::KAN</i>  | This study            |
| YML106                                   | <i>FET5-GFP</i>                               | 6210, <i>FET5-GFP::HIS3</i>  | This study            |
| YML108                                   | <i>FTH1-GFP</i>                               | 6210, <i>FTH1-GFP::HIS3</i>  | This study            |
| YYR1                                     | <i>NCR1-GFP</i>                               | 6210, <i>NCR1-GFP::HIS3</i>  | This study            |
| YML216                                   | <i>GFP-VCX1</i>                               | 6210.1, <i>GFP-VCX::KAN</i>  | This study            |
| YML577                                   | <i>VPH1-mCherry</i>                           | 6210.1, <i>VPH1-mCherry::HIS3</i>  | This study            |
| YML100                                   | <i>pep4Δ</i>                                  | 6210, <i>pep4Δ::LEU2</i>   | This study            |
| YML228                                   | <i>pep4Δ</i> , <i>ZRT3*-GFP</i>               | 6210, <i>ZRT3*-GFP::KAN</i> , <i>pep4Δ::LEU2</i>   | This study            |
| YML260                                   | <i>atg1Δ</i> , <i>COT1-GFP</i>                | 6210.1, <i>Cot1-GFP::KAN</i> , <i>atg1Δ::TRP1</i>  | This study            |
| YML455                                   | <i>atg5 Δ</i> , <i>COT1-GFP</i>               | 6210.1, <i>Cot1-GFP::KAN</i> , <i>atg5Δ::TRP1</i>  | This study            |
| YML456                                   | <i>atg7Δ</i> <i>COT1-GFP</i>                  | 6210.1, <i>Cot1-GFP::KAN</i> , <i>atg7Δ::TRP1</i>  | This study            |
| YML278                                   | <i>atg1 Δ</i> <i>ZRT3*-GFP</i>                | 6210.1, <i>ZRT3*-GFP::KAN</i> , <i>atg1Δ::TRP1</i>   | This study            |
| YML279                                   | <i>atg5 Δ</i> <i>ZRT3*-GFP</i>                | 6210.1, <i>ZRT3*-GFP::KAN</i> , <i>atg5 Δ::TRP1</i>  | This study            |
| YML445                                   | <i>vps23 Δ</i> , <i>COT1-GFP</i>              | 6210.1, <i>COT1-GFP::KAN</i> , <i>vps23 Δ::TRP1</i>  | This study            |
| YML446                                   | <i>vps27 Δ</i> , <i>COT1-GFP</i>              | 6210.1, <i>COT1-GFP::KAN</i> , <i>vps27Δ::TRP1</i>   | This study            |
| YML447                                   | <i>vps36 Δ</i> , <i>COT1-GFP</i>              | 6210.1, <i>COT1-GFP::KAN</i> , <i>vps36Δ::TRP1</i>   | This study            |
| YML448                                   | <i>snf7 Δ</i> , <i>COT1-GFP</i>               | 6210.1, <i>COT1-GFP::KAN</i> , <i>snf7Δ::TRP1</i>  | This study            |
| YML325                                   | <i>vps4 Δ</i> , <i>COT1-GFP</i>               | 6210.1, <i>COT1-GFP::KAN</i> , <i>Vps4Δ::TRP1</i>  | This study            |
| YML441                                   | <i>vps23 Δ</i> <i>ZRT3*-GFP</i>               | 6210.1, <i>ZRT3*-GFP::KAN</i> , <i>vps23 Δ::TRP1</i>   | This study            |
| YML442                                   | <i>vps27 Δ</i> <i>ZRT3*-GFP</i>               | 6210.1, <i>ZRT3*-GFP::KAN</i> , <i>vps27 Δ::TRP1</i>   | This study            |
| YML443                                   | <i>vps36 Δ</i> <i>ZRT3*-GFP</i>               | 6210.1, <i>ZRT3*-GFP::KAN</i> , <i>vps36 Δ::TRP1</i>   | This study            |

| <i>S. cerevisiae</i> expression plasmids |   |  |                       |
| pCM189                                   | <i>COT1-GFP</i>                               | Tet-off vector, <i>tetO7</i> promoter C-terminal GFP   | This study            |
| pRS415                                   | <i>cdc48E315K</i>                             | Native promoter and terminator of <i>CDC48</i> , E315 mutated to K                                     | This study            |
| pCM189                                   | <i>TUL1</i>                                   | Tet-off vector, <i>tetO7</i> promoter, for <i>Tul1</i> overexpression                                  | This study            |

Table S1. Yeast strains and plasmids used in this study (Continued)

| Strain | Name         | Genotype  | Reference/source |
|--------|--------------|---|------------------|
| pCM189 | SSH4         | Tet-off vector, <i>tet</i> O7 promoter, for Ssh4 overexpression   | This study       |
| pCM189 | TUL1-GFP     | Tet-off vector, <i>tet</i> O7 promoter C-terminal GFP, for TUL1-GFP overexpression                              | This study       |
| pCM189 | TUL1-pH-RING | Tet-off vector, <i>tet</i> O7 promoter pHluorin inserted between G689 and G690, for TUL1-pH-RING overexpression | This study       |
| pRS425 | pGal1-MYC-UB | GAL1 promoter, used together with YML853 for overexpression of Myc-Ub by addition of 100 nM β-estradiol         | This study       |
| pRS416 | Zrt3*-GFP    | Endogenous promoter   | This study       |

Table S2. Tested vacuolar membrane transporters

| Name                 | Localization of GFP-tagged protein | Function  |
|----------------------|------------------------------------|---|
| AVT1                 | No signal                          | Imports large neutral amino acids; related to vesicular GABA-glycine transporters               |
| AVT2                 | No signal                          | Imports large neutral amino acids; related to vesicular GABA-glycine transporters               |
| AVT3                 | Stuck in ER                        | Imports large neutral amino acids; related to vesicular GABA-glycine transporters               |
| AVT4                 | No signal                          | Imports large neutral amino acids; related to vesicular GABA-glycine transporters               |
| AVT5                 | No signal                          | Imports large neutral amino acids; related to vesicular GABA-glycine transporters               |
| AVT6                 | No signal                          | Aspartate and glutamate exporter; related to vesicular GABA-glycine transporters                |
| AVT7                 | Stuck in ER                        | Imports large neutral amino acids; related to vesicular GABA-glycine transporters               |
| CCC1                 | Vacuole lumen                      | Putative vacuolar Fe <sup>2+</sup> /Mn <sup>2+</sup> transporter                                |
| COT1                 | Vacuole membrane                   | Zinc transport into the vacuole   |
| CTR2                 | Stuck in ER                        | Putative low-affinity copper transporter of the vacuolar membrane                               |
| EBS1                 | No signal                          | Efflux of cystine   |
| FET5                 | Vacuole membrane                   | Multicopper oxidase; may have a role in iron transport  |
| FTH1                 | Vacuole membrane                   | Putative high-affinity iron transporter; involved in transport of intravacuolar stores of iron  |
| NCR1                 | Vacuole membrane                   | Involved in ergosterol transport and sphingolipid metabolism, homologue of mammalian NPC1       |
| OPT2                 | No signal                          | Oligopeptide transporter  |
| PHO91                | Stuck in ER                        | Low-affinity phosphate transporter of the vacuolar membrane                                     |
| VBA1                 | No signal                          | Permease for cationic amino acids   |
| VBA2                 | No signal                          | Permease for cationic amino acids   |
| VBA3                 | No signal                          | Permease for cationic amino acids   |
| VBA4 <sup>a</sup>    | Vacuole membrane                   | Permease for cationic amino acids   |
| VCX1                 | N-terminal GFP, vacuole membrane   | H/Ca <sup>2+</sup> antiporter   |
| VMA16                | Stuck in ER                        | Subunit C of the vacuolar ATPase  |
| VMR1                 | No signal                          | ABC transporter involved in multidrug transport   |
| VTC1                 | Stuck in ER                        | Subunit of the vacuolar transporter chaperone (VTC) complex                                     |
| VTC2                 | Stuck in ER                        | Subunit of the vacuolar transporter chaperone (VTC) complex                                     |
| VTC3                 | No signal                          | Subunit of the vacuolar transporter chaperone (VTC) complex                                     |
| VTC4                 | Stuck in ER                        | Involved in synthesis and transfer of polyP to the vacuole                                      |
| YCF1                 | Vacuole membrane                   | ABC transporter and glutathione S-conjugate transporter; also transports unconjugated bilirubin |
| YPL162C <sup>b</sup> | Vacuole membrane                   | Protein of unknown function   |
| YPQ2 <sup>a</sup>    | Vacuole membrane                   | Vacuolar membrane transporter for cationic amino acids  |
| YVC1                 | Stuck in ER                        | Cation channel, mediates release of Ca <sup>2+</sup>  |
| ZRC1                 | Vacuole membrane                   | Zinc transporter; transports zinc from the cytosol into the vacuole for storage                 |
| ZRT3*                | Vacuole membrane                   | Zinc transporter; transports zinc from vacuole to the cytoplasm                                 |

<sup>a</sup>Tested in a previous study (Li et al., 2015).<sup>b</sup>Not tested because the function is unknown.

Table S3. Tested E3 ubiquitin ligases

| Gene deleted   | Note  | Blocked Cot1-GFP degradation?            |
|----------------|---|--|
| <i>RKR1</i>    | RING finger protein YMR247C                           | No                                       |
| <i>UBR2</i>    | E3 ubiquitin-protein ligase UBR2                      | No                                       |
| <i>HRT3</i>    | F-box protein HRT3                                    | No                                       |
| <i>UFO1</i>    | Ubiquitin ligase complex F-box protein UFO1           | No                                       |
| <i>HRD1</i>    | ERAD-associated E3 ubiquitin-protein ligase HRD1      | No                                       |
| <i>DIA2</i>    | Protein DIA2  | No                                       |
| <i>SKP2</i>    | F-box protein YNL311C                                 | No                                       |
| <i>SAN1</i>    | Protein SAN1  | No                                       |
| <i>YDR131C</i> | F-box protein YDR131C                                 | No                                       |
| <i>MOT2</i>    | General negative regulator of transcription subunit 4 | No                                       |
| <i>UBR1</i>    | E3 ubiquitin-protein ligase UBR1                      | No                                       |
| <i>UFD4</i>    | Ubiquitin fusion degradation protein 4                | No                                       |
| <i>TUL1</i>    | Transmembrane E3 ubiquitin-protein ligase 1           | Yes                                      |
| <i>YLR224W</i> | F-box protein YLR224W                                 | No                                       |
| <i>MDM30</i>   | Mitochondrial distribution and morphology protein 30  | No                                       |
| <i>RCY1</i>    | Recyclin-1  | No                                       |
| <i>YJL149W</i> | F-box protein   | No                                       |
| <i>YLR352W</i> | F-box protein   | No                                       |
| <i>ELA1</i>    | Elongin-A   | No                                       |
| <i>AMA1</i>    | Meiosis-specific APC/C activator protein              | No                                       |
| <i>CDH1</i>    | APC/C activator protein                               | No                                       |
| <i>PIB1</i>    | E3 ubiquitin-protein ligase                           | A subtle defect observed on Western blot |
| <i>YDR306C</i> | F-box protein   | No                                       |
| <i>ASI1</i>    | Amino acid sensor-independent protein 1               | No                                       |
| <i>RAD5</i>    | DNA repair protein RAD5                               | No                                       |
| <i>UFD2</i>    | Ubiquitin conjugation factor E4                       | No                                       |
| <i>RAD7</i>    | DNA repair protein                                    | No                                       |
| <i>HUL4</i>    | Probable E3 ubiquitin-protein ligase                  | No                                       |
| <i>RAD18</i>   | Postreplication repair E3 ubiquitin-protein ligase    | No                                       |
| <i>SAF1</i>    | F-box protein   | No                                       |
| <i>ASI3</i>    | Amino acid sensor-independent protein 3               | No                                       |
| <i>TOM1</i>    | E3 ubiquitin-protein ligase                           | No                                       |
| <i>SSM4</i>    | E3 ubiquitin-protein ligase                           | No                                       |
| <i>HUL5</i>    | Probable E3 ubiquitin-protein ligase                  | No                                       |
| <i>BRE1</i>    | E3 ubiquitin-protein ligase                           | No                                       |
| <i>GRR1</i>    | SCF E3 ubiquitin ligase complex F-box protein         | No                                       |
| <i>MET30</i>   | F-box protein   | No                                       |
| <i>CDC4</i>    | Cell division control protein 4                       | No                                       |
