Supplementary figures

sFig.1

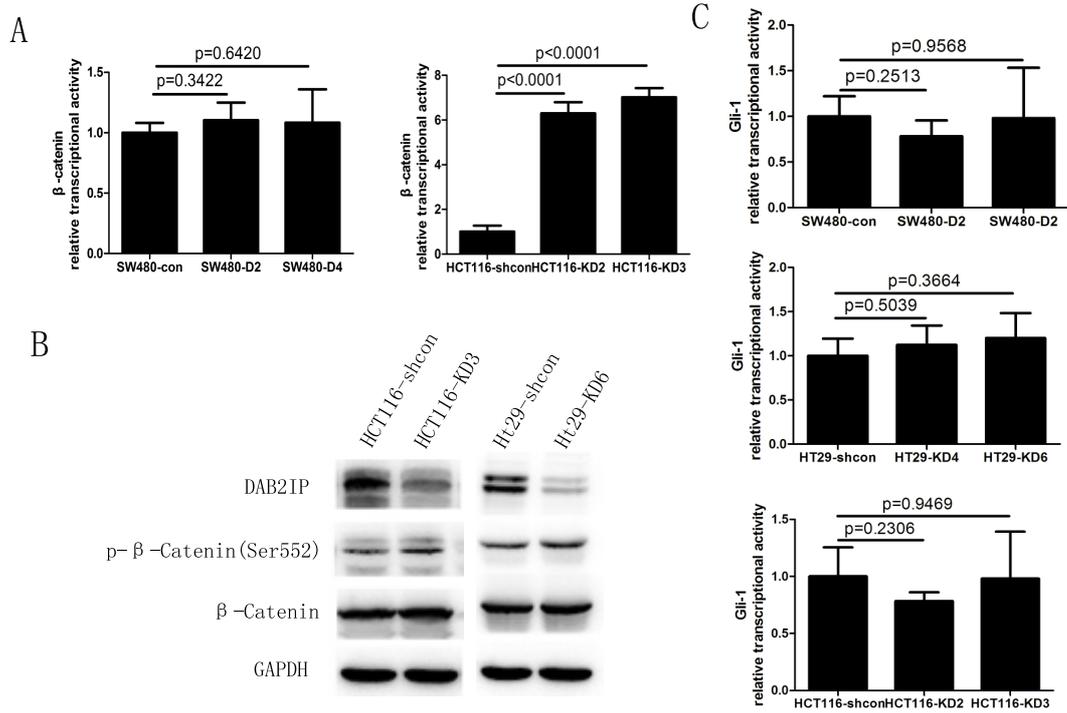

Supplementary Figure 1: Stained grading of DAB2IP was according to intensity and extent.

sFig. 2

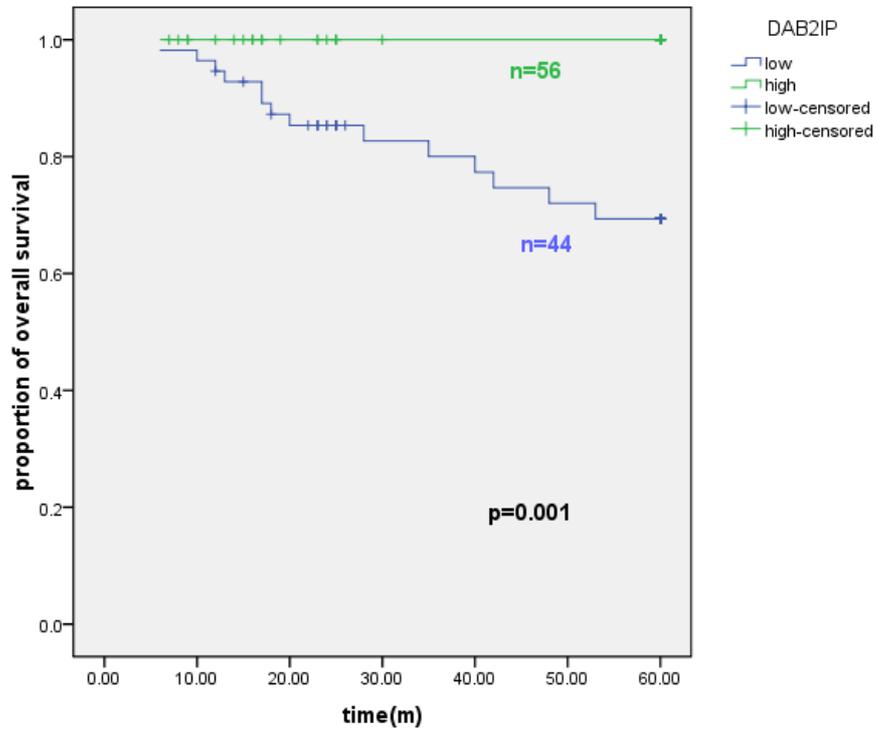

Supplementary Figure 2: Four CSC markers are detected by quantitative RT-PCR.

sFig. 3

Supplementary Figure 3: (A) β -catenin transcriptional activity was detected by luciferase assay in SW480 and HCT116 cells. (B) p- β -Catenin (Ser552) and total β -Catenin were detected by western blot in HCT116 (shcon and KD3) and HT29 (shcon and KD-6). (C) Gli-1 transcriptional activity was detected by luciferase assay in SW480, HT29 and HCT116.

sFig. 4

Supplementary Figure 4: Kaplan-Meier analysis on metastases-free colorectal patients classified by total DAB2IP expression in primary site; n = 56 for DAB2IP high group, n = 44 for DAB2IP low group. The ‘censored’ means the researchers does not get the precise survival data because of loss follow-up, accidental death and other reasons.
