

## **Supplemental Data:**

Figure S1: Organ analysis of *Eμ-Myc* transgenic mice of different genotypes after tumor onset and evaluation of the functionality of the Myc/p19<sup>Arf</sup>/p53 axis

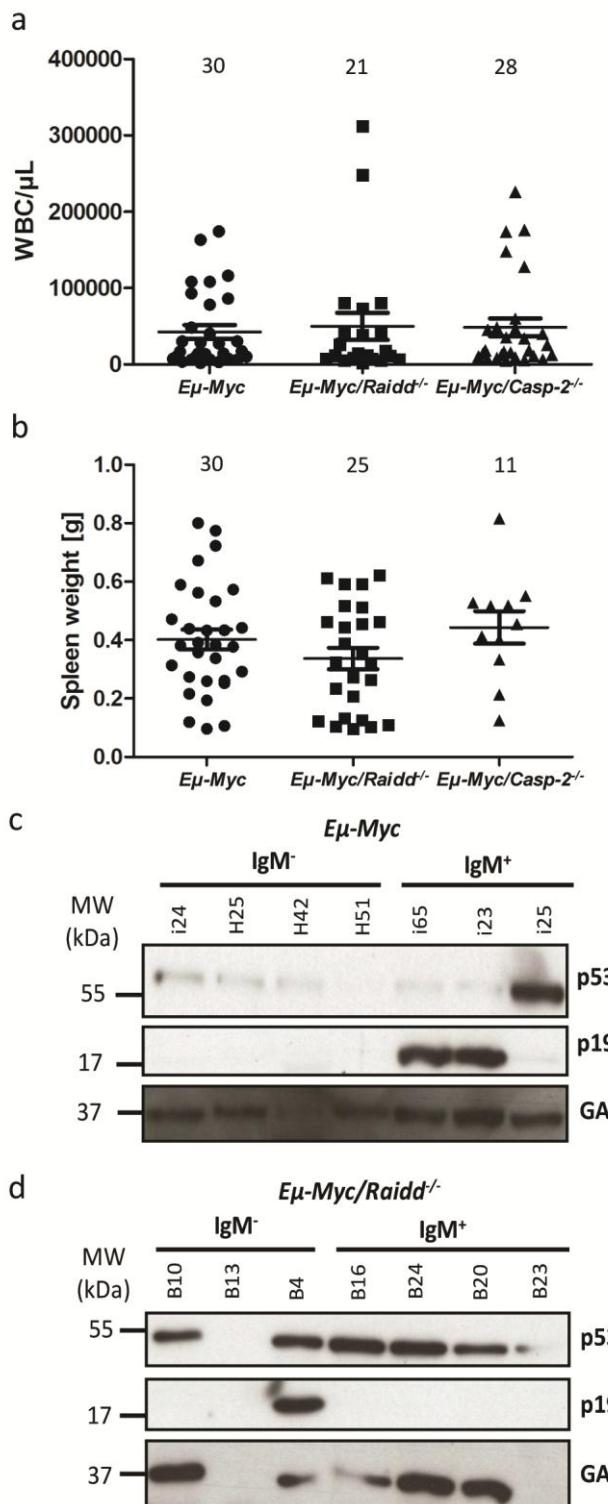

Figure S2: Changes in transcription of p53 target genes upon loss of Caspase-2 or Raidd in c-Myc transgenic premalignant pre-B cells.

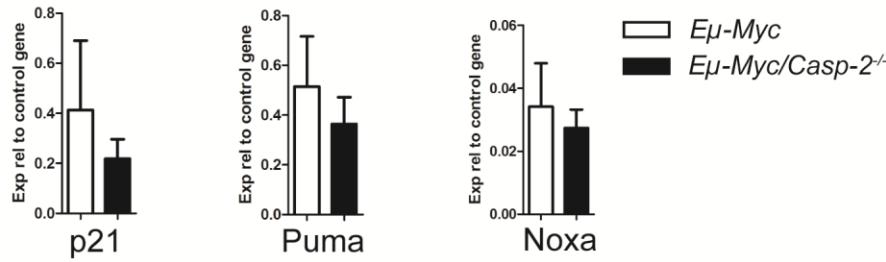

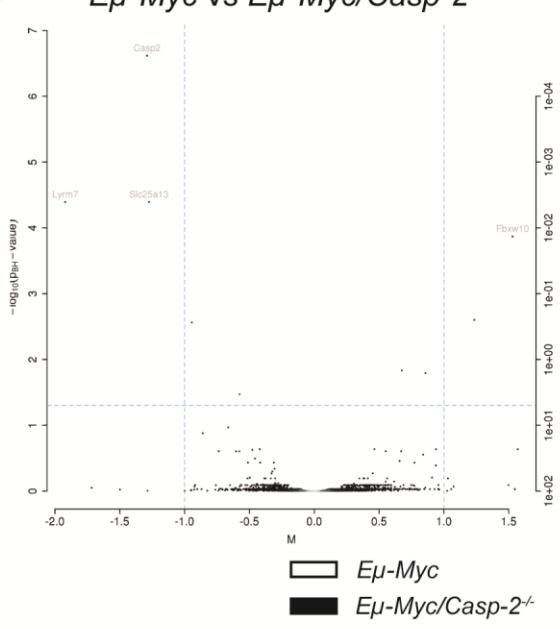

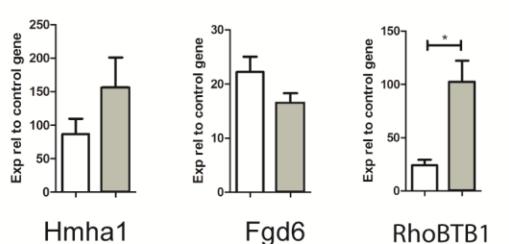

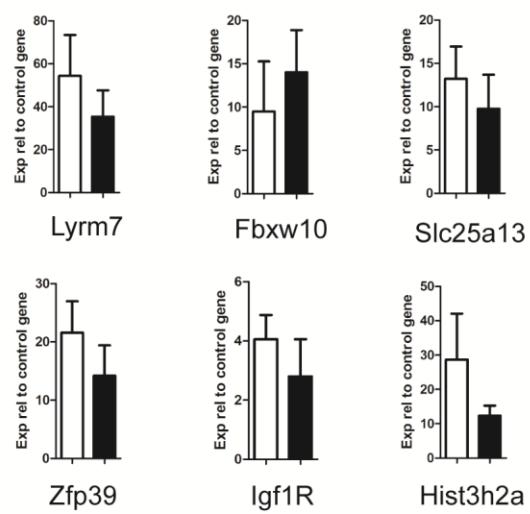

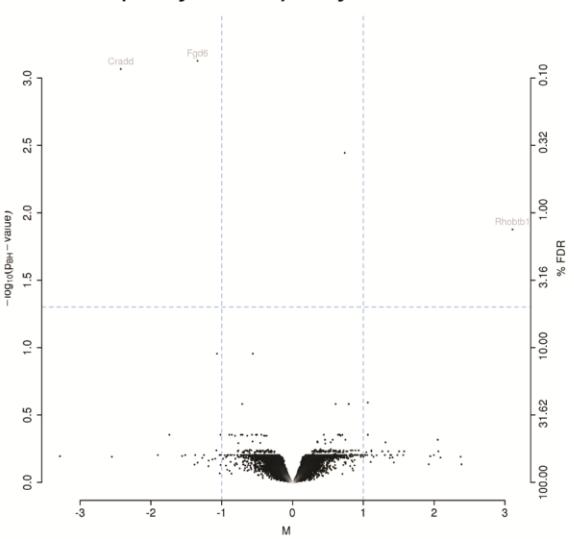

### **Figure S1:**

(a) White blood cell count (WBC) in peripheral blood of diseased *Eμ-Myc* mice. Peripheral blood was stained with Turks solution (1:200) and counted in a hemocytometer. Data are given as WBC/ $\mu$ l. (b) Spleen weight in grams of mice with palpable *Eμ-Myc* tumors of the indicated genotypes. Numbers of animals analyzed are indicated. (c and d) Representative Western blot analysis of the tumor suppressor gene p53 and its target p19ARF in IgM<sup>+</sup> and IgM<sup>-</sup> tumor lysates derived from *Eμ-Myc* (c) and *Eμ-Myc/Raidd*<sup>-/-</sup> (d) mice. Reprobing with GAPDH was used as a control for loading. The alpha-numerical designations (e.g. H25) refer to the mouse ID number in our cohorts.

### **Figure S2:**

(a) Relative mRNA levels of p21, Puma and Noxa in premalignant bone marrow-derived B220<sup>+</sup>CD43<sup>+</sup>IgM<sup>-</sup> pre-B cells (n=3). (b) Vulcano blots of an Affymetrix Chip assay performed using mRNA from spleen-derived B220<sup>+</sup>IgM<sup>+</sup>IgD<sup>-</sup> B cells isolated from indicated genotypes (n=3). Hits with adjusted  $p_{BH}$  – value <0.05 were considered as significantly changed. Adjustment was performed using Benjamini Hochberg method. Confirmative qRT-PCR analysis of hits identified in (b) using mRNA from B cells from *Eμ-Myc* and *Eμ-Myc/Casp-2*<sup>-/-</sup> (c) or *Eμ-Myc/Raidd*<sup>-/-</sup> (d) mice.

**a****b****c** *Eμ-Myc* vs *Eμ-Myc/Raidd<sup>-/-</sup>*
