

Supplementary information, Figure S7 Coimmunoprecipitation of TcdB-His with the indicated CSPG4 proteins in HEK293T cells transfected with indicated Flag-CSPG4 constructs. Immunoblotting analysis was conducted using anti-Flag and anti-TcdB antibodies after co-incubation of the cell lysates with 5 μ g of TcdB at 4°C overnight. CSPG4-N₃₀₋₆₄₀ proteins extracted from two independent-acquired clones were used for better representation (**A**).
