

Supplementary information, Figure S8 The reduction of pulmonary inflammation induced by mitochondria in *Tlr9*^{-/-} mice.

(A) Normal C57BL/6 mice and *Tlr9*^{-/-} mice were treated with mitochondria (200µg /mouse) for 24 h and HE staining of lung sections was performed. Scale bar, 50 µm. (B) Esterase-stained neutrophils were counted in ten high power fields (HPFs). Data are mean ±SEM; *n*=3. ***P*<0.01 compared with control group by Student's *t*-test.
