

Supplementary information, Figure S8

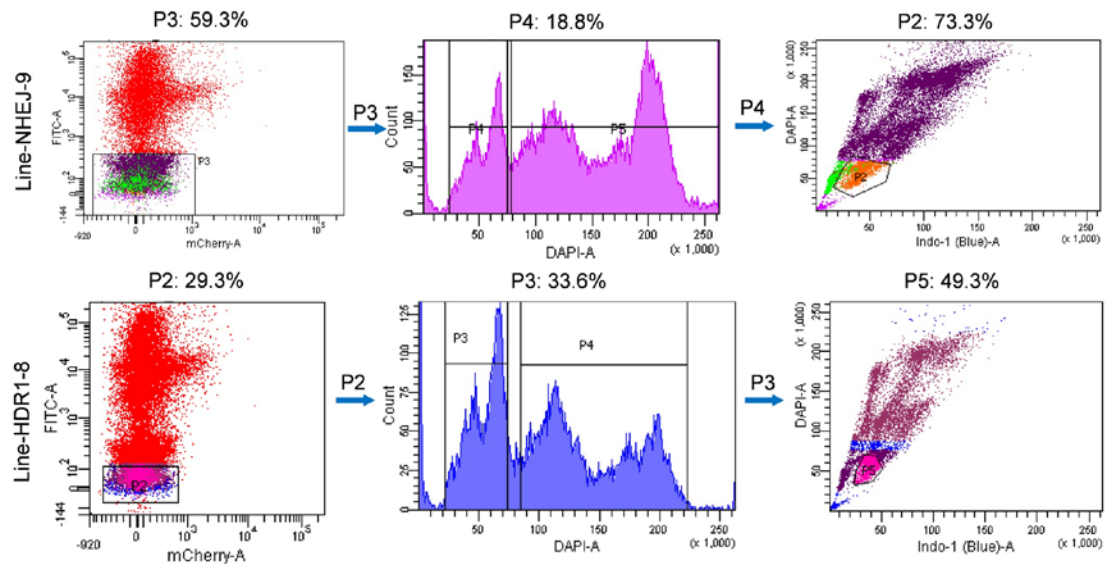

Figure S8 Isolation of non-EGFP haploid cells from testis reconstituted by transplantation of SSCs from Line-NHEJ-9 (upper) and Line-HDR1-8 (bottom) into recipient testes of infertile males with homozygous *EGFP* marker for ROSI. EGFP-negative cells are sorted from reconstituted testis and haploid cells (RS) are further isolated from EGFP-negative cells according to DNA content (middle and right).
