

Supplementary Figure S2: Growth curve of *R. intestinalis* in 'Normal Fe' YCFA, low Fe '50 μM dip' YCFA or very low Fe '150 μM dip' YCFA (addition of 2,2'-dipyridyl) and 'High Fe' YCFA (25 mg Fe L⁻¹). Values are means ± SD (n=3). Values with an asterisk (*) are significantly different from growth under normal Fe conditions at the same timepoint, $P < 0.05$.
