

# **Supplementary Information**

## **Impact of a wastewater treatment plant on microbial community composition and function in a hyporheic zone of a eutrophic river**

Siavash Atashgahi, Rozelin Aydin, Mauricio R. Dimitrov, Detmer Sipkema, Kelly Hamonts, Leo Lahti, Farai Maphosa, Thomas Kruse, Edoardo Saccenti, Dirk Springael, Winnie Dejonghe & Hauke Smidt

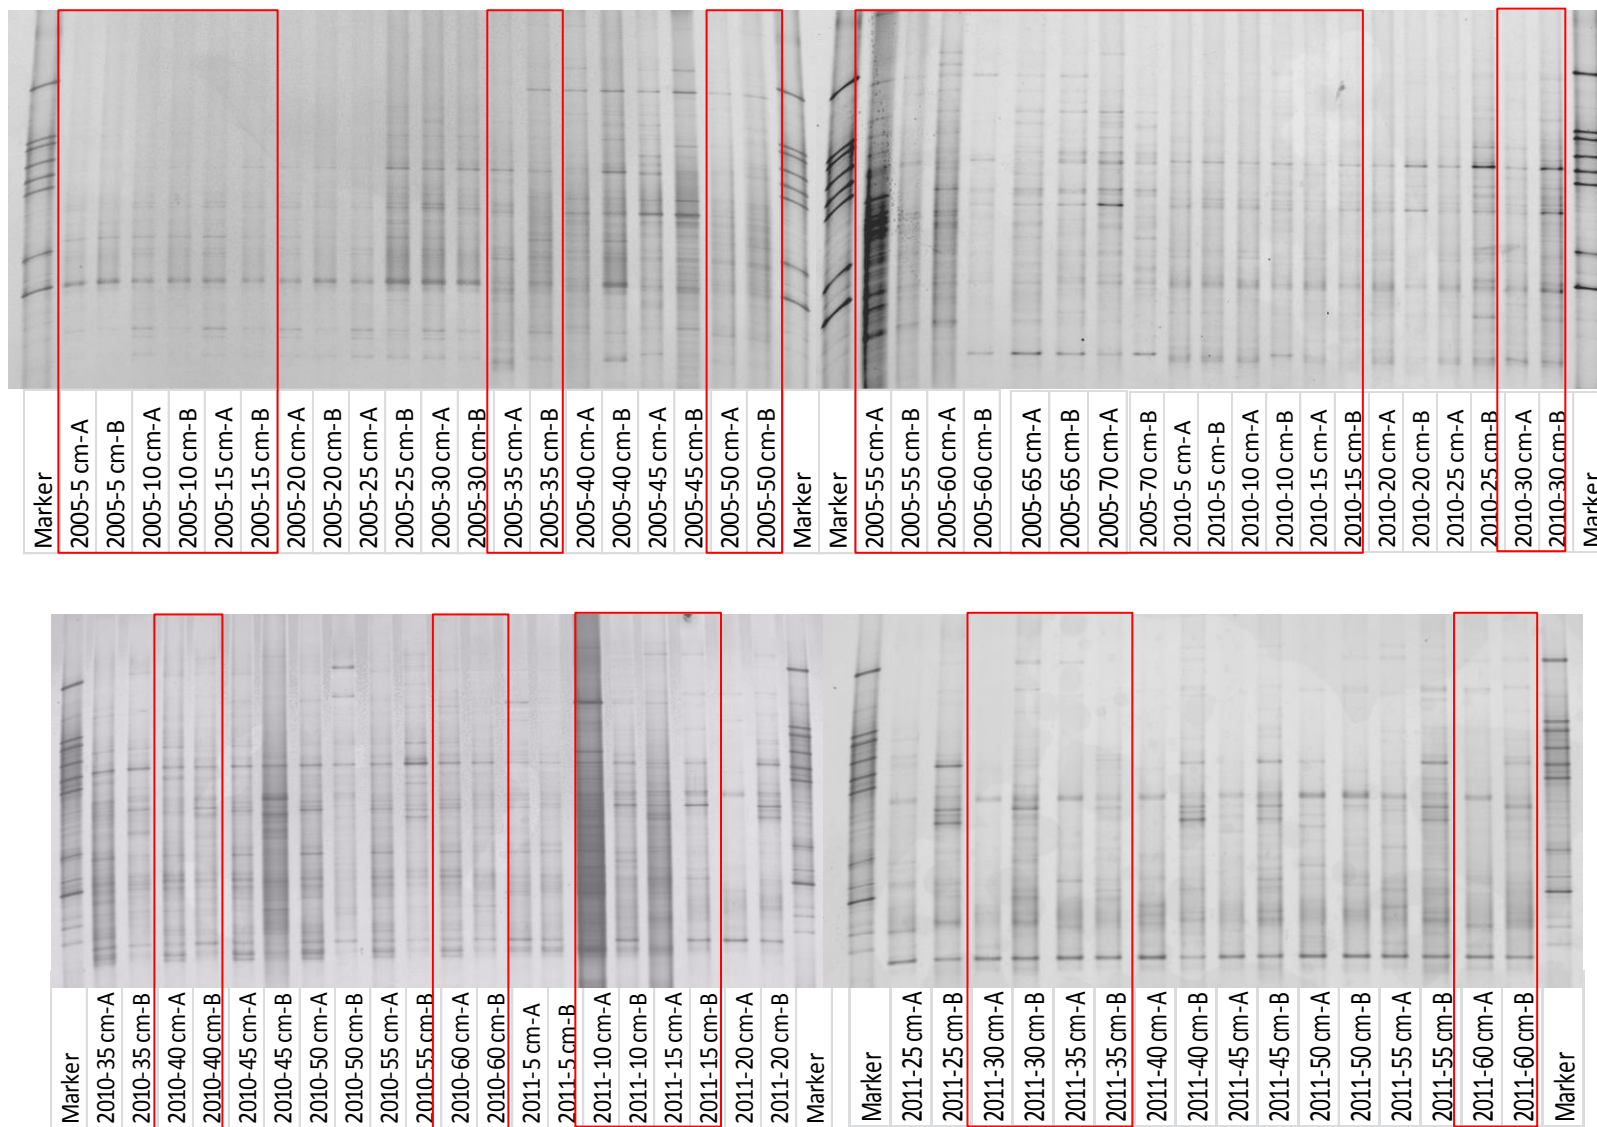

Figure S1. DGGE profiles obtained from each 5 cm interval of the duplicate sediment cores from 2005, 2010 and 2011. The samples used for further molecular analysis are shown in red boxes.

Figure S2. Copy numbers of sulphate reducers (*dsrB*) and methanogens (*mcrA*, *amoA* (bacteria), *amoA* (archaea), *nirS*, *nirK*, and *nosZ*) genes at different depths in the duplicate sediment core samples taken in 2005, 2010 and 2011, as determined by qPCR. Each value represents the average value obtained from triplicate qPCRs performed on one sample.

## Core-A

## Core-B

Figure S3. Log-scale relative of the dominant bacterial classes at different depths in the duplicate sediment core samples taken in 2005 (right), 2010 (middle) and 2011 (left).

## Core-A

## Core-B

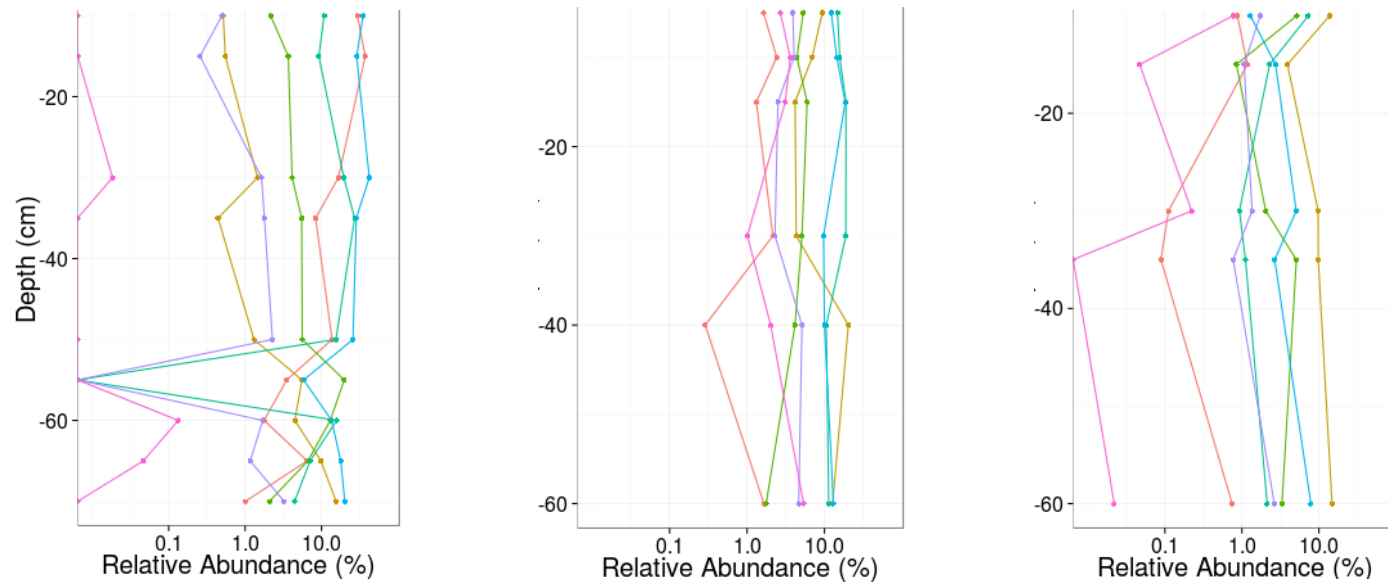

Figure S4. Log-scale relative of the dominant bacterial orders at different depths in the duplicate sediment core samples taken in 2005 (right), 2010 (middle) and 2011 (left).

Table S1. Overview of primer sequences and thermal cycling conditions used for qPCR in this study.

Table S4. Characteristics of duplicate sediment cores taken in 2005, 2010 and 2011 including total organic carbon (TOC) and total nitrogen (TN) content, 16S rRNA gene copy numbers of bacteria and *D. mccartyi* (as measured by qPCR). Each qPCR value represents the average and standard deviation obtained from triplicate reactions.

| Core samples | TOC (%) |        | TN (%) |        | Bacteria |                 |          |         | <i>D. mccartyi</i> |         |          |         |

Table S7. Copy numbers of *dsrB* (sulphate reducers), *mcrA* (methanogens) and bacterial and archaeal *amoA* genes at different depths in the duplicate sediment core samples taken in 2005, 2010 and 2011, as determined by qPCR. Each value represents the average value obtained from triplicate qPCRs performed on one sample.

Table S10. Taxa that significantly changed over time between pre- and post-WWTP sediment core samples. The taxa are ordered by the effect size, according to a linear regression model where logarithmic relative abundance is predicted based on the core type, year (2005, 2010, and 2011), and depth (10, 15, 30, and 60 cm depths where complete data was available) as fixed effects. The effect size indicates how much the sampling year affects the log abundance according to the model. A small constant (the minimum of the non-zero values) was added to the relative abundances to avoid singularities on zero abundances in taking the logarithm. The analysis was performed with R <sup>13</sup>.

| Level  | Taxon                    | q-value | Effect size |
|--------|--------------------------|---------|-------------|
| Phylum | <i>Chloroflexi</i>       | 0.00061 | -0.24705    |
| Phylum | <i>Nitrospirae</i>       | 0.22936 | 0.11436     |
| Phylum | <i>Firmicutes</i>        | 0.04272 | -0.11413    |
| Phylum | <i>Proteobacteria</i>    | 0.00001 | 0.05176     |
| Order  | <i>Anaerolineales</i>    | 0.00002 | -0.30582    |
| Order  | <i>Lactobacillales</i>   | 0.00594 | -0.19897    |
| Order  | <i>Clostridiales</i>     | 0.02586 | -0.17292    |
| Order  | <i>Burkholderiales</i>   | 0.00000 | 0.15111     |
| Order  | <i>Rhodocyclales</i>     | 0.17111 | -0.14196    |
| Order  | <i>Desulfobacterales</i> | 0.08725 | -0.13968    |
| Order  | <i>Xanthomonadales</i>   | 0.19946 | 0.10104     |

Table S11. Diversity comparisons between different cores based on t-test as performed in R <sup>13</sup>. Significant difference at a q-value < 0.25 is marked as TRUE/FALSE.

| Group-1 | Group-2 | Shannon |             | Chao1   |             | OTU count |             |
|---------|---------|---------|-------------|---------|-------------|-----------|-------------|
|         |         | q-value | significant | q-value | significant | q-value   | significant |
