

S3 Fig. O₂ consumption in BHI-enriched medium and in PBS.

(A) O₂ Flux per Volume is represented by black lines and O₂ concentration is represented by grey lines for both media : PBS (solid lines) and enriched BHI (dashed lines).

(B) The graphs represent the speed of consumption of O₂ (O₂ Flux per Volume) (black lines) by PBS and exogenous remaining O₂ concentrations in the oxygraph chamber (grey lines). Yeast extract (5 g/l) was added at 9 min.
