

S2 Fig. Body composition changes in Study 3. After 2-week treatment of 30 g kg⁻¹ exenatide or 0.081% evogliptin [Study 3 as described in *Method* section], (A) body weight, (B) whole body fat mass, and (C) lean mass were assessed before (∅) and after 2-week treatment (∩) in HF-DIO mice (n=8/group). *, *P* < 0.05 vs. HF-DIO control by One-way ANOVA at each time point.
